

MANY BODIES DUG FROM MUD

CITIZENS SWARM OVER CENTRAL PORTIONS OF DAYTON

Republic Is a Camp of Possibilities

District Is Huge Milling Proposition

Fourteen Leases Have Been Granted and Active Work to Start Within Next Few Days

(By KENNETH J. BOOTH.)

Hundreds of high grade mining camps have come into existence in Nevada during the history of the state, and of the total number discovered, less than twelve percent remain on the map. In a few instances once prosperous camps are now marked by skeleton wrecks while in the greater number of cases scattering mounds of earth serve as the headstones of mines that were calculated to produce millions. The high grade discoveries, with but few exceptions, were short lived, although history will tell us that several districts produced millions during the early days when mining was carried on in a crude manner.

During the history of Nevada but few camps started in life producing ore of a milling grade. The promoters of the various districts could not see a prosperous future unless assay certificates were produced showing that the ore went into figures that was classed as high grade. Great care was taken to secure samples that would produce high assays and naturally, it was the glowing reports of marvellously rich ore that started the stampede.

The new camp of Republic, 35 miles northwest of Tonopah, as the crow flies, if any crow ever flew on the desert, gives promise of being unique in its distinction. Republic is not claiming attention as a high grade camp, nor is attention being claimed in any way by the men who are interested in the district. The new discovery has great possibilities of being one of the greatest milling propositions ever opened in this state, notwithstanding the fact that high grade ore also is to be found.

A brief period of four hours was spent in Republic yesterday (Thursday) by the writer and that time sufficed for a visit to be made to the properties surrounding the town site proper. There are other properties outside of the camp of Republic and several days would be required to make a thorough examination of the entire district.

Two parallel ledges traverse the camp and each has been opened up for a distance of 3000 feet. Between the two ledges, a third ledge, about 600 feet in length, has been opened up at various points. The last named body lies directly at right angles between the two former mentioned ledges, and at points where shallow workings have been dug the quartz vein shows as high as four feet in width.

The principal ore body is the extreme north ledge, which, it was announced, was really discovered by Thos. Kearns, one of the principal operators in the camp. This ledge has a course along the side of a low hill for several hundred feet. It takes a sudden turn down the hill side and is buried in the flat at the edge of the townsite. Croppings along the hillside course of the vein have produced excellent assays, authentic reports stating that the values averaged around the \$166 figure. Shallow trenches have been dug in several places and the body appears to be two feet in width along the course. No work has been done, although leasers are now preparing to start work.

Ed Malley has secured what appears to be the best lease in the district. This is known as lease No. 2 and adjoins the section reserved by the company. The ledge has been trencched and opened in two different places. The only two questions to be determined concerning this and other leases along the ledge are: Will the ledge go down and will the values hold up?

This same question can always be asked of every mining strike that came into existence and can only be answered when depth has been at-

tained. Surface showings never make a mine, but it cannot be denied that the showings at Republic surpass any discovery made in the south in years.

Some four or five hundred feet above the brow of the hill where the ledge disappears in the flats, two shafts have been sent down on the continuation of the ore body. The shafts were sunk several years ago by Downey and Cirac and several small ore shipments were made that settled the owners handsome profits. The first shaft opened up a four inch stringer at a depth of about eight feet that ran into high figures. From four inches in width the stringer widened out to a ledge 18 inches wide that assayed \$400 to the ton. At the bottom of the 50 foot shaft the ledge is five feet wide and it was stated that the assays showed the body to be \$35 ore.

About fifty feet distant a second shaft was sent down 92 feet. This is connected at the 50 foot level with the original shaft. At the bottom of the second shaft 2 1/2 feet of vein matter will break down at \$25 per ton, according to statements made by S. C. Cirac.

The vein is in the porphyry, although in the shaft a line formation appears on the hanging wall side. The formation throughout the length of the vein is of a line contact and porphyry. Neither the hanging nor footwall had been opened up in the shaft workings. The vein in the mine workings dips east 25 degrees north.

The second vein, which has also been traced 3000 feet in length, lies about 800 or 1000 feet distant from the one along the line contact. This ledge was originally opened up by John Hyland of Tonopah, who owns seven claims in the district. Hyland has made a number of shipments from his property, receiving good returns. For the past six years he has been working away, occasionally having assistance, but the greater part of the time conducting operations alone. He has made a dozen cuts and in several places has sunk shafts to depth ranging from 10 to 100 feet. Ore can be obtained throughout the length of the ledge and the values range accordingly. This ledge carries more quartz than the one upon which the Downey and Cirac shafts were sunk. In both ledges the silver predominates with the ratio of gold being practically the same as exists in Tonopah ores. Silver chloride and hornsilver can be easily discerned in both ledges.

The third ledge may yet prove to be a continuation of the Hyland ledge as the ore is of practically the same character, although carrying more quartz. It turns off at a direct angle from the Hyland ledge and after being traced for a distance of 600 feet is lost when it enters the line formation which is several hundred feet in width between the porphyry belts.

Thomas Kearns, W. H. Fletcher, L. D. Jackson and John Gallagher are in control of the district, having secured the Cirac and Downey, and Hyland properties by a bond. Seven claims owned by Hyland, six claims from Cirac and Downey, three fractions and about ten new claims located constitute the district surrounding the townsite. The gentlemen in control have announced that they would make a leasers camp of Republic and are granting leases to all who apply. To date fourteen have been granted and this number will be greatly augmented before the end of the coming week. The leases are 200 feet in width by 600 feet in length. A royalty of 20 per cent is exacted upon all ores. The leases are of a year's duration and one restriction calls for the employment of 90 shifts per month. It was explained that this restriction was necessary as the property was only under bond and

TONOPAH WILL CONTRIBUTE TO RELIEF OF FLOOD SUFFERERS

In compliance to the appeals for aid for the Dayton and other flood sufferers, Tonopah will make contributions to this end. The Tonopah and Goldfield railroad company has announced that supplies for the sufferers will be transported free of charge over the company lines and that other railroads have issued like orders.

Rev. J. M. Swander, of the Presbyterian church, announced today that he would receive contributions of funds, food, clothing and in fact all kinds of supplies that would tend to alleviate the suffering of the thousands of people who were rendered homeless by the disaster. Swander will receive the supplies at the church or at the huge store room in the rear of the brokerage office of H. E. Epstine. The store room will be converted into a supply depot and all goods will be carefully packed for shipment before being delivered to the depot.

It is urged that all residents of Tonopah with extra clothing like articles donate them to the good of the cause.

ORE SHIPMENTS TONOPAH MINES OF PAST WEEK

LOCAL MINES SEND OUT 10,998 TONS WITH ESTIMATED VALUE OF \$237,380.

The ore shipments from the various Tonopah mines totaled 10,998 tons during the past week, with an estimated valuation of \$237,380. The shipments did not come up to the speedy development was needed to prove up the holdings before the final payments were to be made.

The work of surveying the townsite was completed yesterday by C. S. Wilkes of Tonopah. Several tents have been erected both on and off the site and it is estimated that over 80 people are now in the district. The population will be increased considerably during the coming week by the leasers, a number of whom are now ordering their outfits and will commence work as soon as the supplies can be hauled to the district. Most of the outfitting has been done in Tonopah.

The entire district is mineralized. Several miles in one direction is the old Orizaba mine. This property was operated prior to the panic. It is now being worked by Millers and Tonopah people. Frederick Bradshaw, superintendent of the Belmont is understood to have an interest in the mine. Good values are said to have been received from the property and it has also been declared that a large amount of ore is now on the dump, having been extracted prior to the closing of the property. In another direction is the property operated by Broyles and Wray, who are said to have made a strike in gold. The extent of the strike is not known.

G. A. Roberts and Jack Grant of Tonopah have a claim about two miles from the townsite and ledge croppings show silver bromides. Samples of the croppings were brought to Tonopah last night by Roberts and Grant, who returned to this city after spending two days in the district investigating their claim.

The first lease in the district to start operations is that held by Calahan, Gallagher and Mooney. Calahan started sinking a cut yesterday. He is sinking on the ledge. This ledge adjoins that of Ed Malley, which in turn adjoins the block reserved for the company. C. S. Wilkes' lease adjoins the company block on the other side. He also started work trenching yesterday and late in the afternoon uncovered what he believed to be the ledge.

The district has great possibilities providing shipping ore in quantity is found to a good depth. This possibility has existed in every camp in the world and no brilliancy is required to arrive at such reasoning. The work thus far has not been to open up the ledge for the owners

record of the previous week. The shipments were made as follows:

The Tonopah Mining company sent to mill 3299 tons, the Belmont 3665 tons, the Montana-Tonopah 1049 tons, the Tonopah Extension 1050 tons, the West End 1000 tons, the MacNamara 584 tons, the Jim Butler 500 tons, and the Midway 100 tons.

AMERICANS TO FURNISH CHINA TEN MILLIONS

WILL ALSO FURNISH HUNDRED MILLION IF UNITED STATES DOES NOT INTERFERE.

WASHINGTON, Mar. 29.—President Wilson learned today that an American financial syndicate was ready to furnish China a short term loan of ten millions, and would later negotiate a loan of one hundred millions or more. The syndicate asked the assurance that the United States government would not participate in any way in the negotiations.

They were afforded no opportunity to prospect the district after securing control. The rush was started before they really had secured the bonds on the various properties. However, they declare they will give everyone a chance, and now all that remains to prove up the district is the sinking of several shafts along the course of the ledges.

Water for domestic purposes is to be found in the town as a well has been sunk to a good depth. The water is sixteen feet deep in the well and is pumped out. Four miles distant is plenty of wood for the asking. With both necessities furnished the most important problem of providing for the camp is solved.

This article has not been written for the purpose of causing a stampede to the camp. It has been composed with the sole idea of portraying the true condition of the district as they were found to exist. It can not be denied that the district has merit, as far as surface showings indicate, but beyond that it is impossible to predict. Development has been required to prove every camp that came into existence and this is true with Republic. The camp is but three weeks old and no time has been afforded for development purposes.

It is the opinion of the writer, take it for whatever you think it to be worth, that Republic will not acquire a national reputation as a high grade camp. This notwithstanding the fact that high grade ore is to be found on the surface. Several of the leasers, perhaps half a dozen, possibly more and maybe less, will strike high grade ore, while the majority will extract milling ore ranging in values from \$20 to \$40 per ton. However, this is a mere surmise and guessing in the mining game has always been found to produce poor results.

STOCK EXCHANGE BUILDING IS GUTTED BY FIRE

RICHIEU SALOON SUFFERS LOSS BY FIRE SECOND TIME DURING MONTH.

For the second time in three weeks fire broke out last night in the old stock exchange building on Main street, occupied by the Richelieu saloon and restaurant. The alarm was sounded at 2:45 o'clock this morning and a half hour later after desperate fighting on the part of the firemen and volunteers the flames were extinguished without having injured an adjoining building.

The stock exchange building was completely gutted in the rear part, although the front portion escaped with but little damage from the flames. From appearances the fire started in the left of the structure, supposedly from a stove pipe. However it has been stated that the blaze was of incendiary origin, but no proof has been presented to back up this claim. When first noticed the flames were shooting from the roof about the center of the structure and not far from where the chimney emerges. Within ten minutes the entire roof was ablaze and for a brief period it appeared that the situation was beyond the control of the fire department.

Five lines of hose were strung and with an excellent water pressure the work of subduing the conflagration was carried on. It was slow work, made necessarily so by the attempt to keep the fire confined to its original area and prevent spreading to the Banovich grocery store on the north and Peart's on the south.

The entire rear portion of the Richelieu bar is wrecked and the roof has fallen in. The front part of the building occupied by the bar is practically intact, although damaged considerably by water. The pool and billiard tables were destroyed as were many other furnishings. The restaurant part of the building was not damaged to any great extent and Jack Champlain will soon be able to resume serving meals.

It is understood that \$5000 insurance was carried on the furnishings and stock in the building. The total loss will amount to about \$500 on the building and less than \$1300 on the furnishings.

BANK CASHIER IS KILLED AS HE ATTACKS ROBBER

REFUSES TO THROW UP HANDS AND AFTER FIRING SHOT IS KILLED BY BANDIT.

BARNES, Kans., Mar. 29.—Robert I. Brown, cashier of the Barnes State bank was shot and killed today by a man who held him up and robbed the institution. A posse of citizens shot the robber to death as he was trying to escape from town with a bag of gold containing six hundred dollars, which he took from the cashier's counter. Brown met his death when, instead of obeying the order to hold up his hands, he fired at the robber.

GOVERNMENT TIMBER LANDS WILL BE SOLD WASHINGTON, Mar. 29.—Secretary of Agriculture Houston today approved the advertising for sale of two billion feet of timber in the national forests of California, Idaho, Montana and Alaska.

TEMPERATURE REPORT.

Highest temperature yesterday, 57; a year ago, 55.
Lowest temperature last night, 37; a year ago, 23.

UNDERTAKERS PLACE THE TOTAL NUMBER OF DEAD AT 800, ALTHOUGH BUSINESS MEN CLAIM FATALITIES WILL NOT EXCEED TWO HUNDRED

DAYTON, O., Mar. 29.—The estimate of the number of dead in this city differs widely. Many business men say it will not exceed 150, though the undertakers estimate it at 800.

Large rescue parties are at work succoring the sufferers and recovering the dead animals are lying in the streets. There has been comparatively little sickness, owing to the cold weather. The city water works which had been out of commission since Tuesday morning, was restored at noon today, relieving one of the most serious phases of the situation, which is improving rapidly.

Many persons are still marooned on the river dale north of Dayton but will be relieved before night. Train loads of food are arriving.

The citizens of Dayton swarmed over the central parts of the city today for the first time since the flood rushed over town. The sun is shining and fire engines are pumping water from the basements. In the Bechel house, supposed to have been burned with loss of life, the water reached to the second story. Nine Western Union operators were marooned in the office for 42 hours and subsisted on a barrel of cabbage which was caught as it floated by.

Secretary of War Garrison has arrived and today decided to order the federal sanitary experts here. Many bodies have been recovered, dug from the mud several feet deep as they were left by the receding waters.

Twenty Thousand Homeless. CINCINNATI, O., Mar. 29.—With the Ohio river covering the entire lower section of this city, and with refugees from stricken upstate towns coming in by the hundreds, Cincinnati today faced a serious situation. More than 60 city blocks are under water and the river is rising. In six Kentucky cities across the Ohio from here the authorities have estimated that over 12,000 are already homeless and more than 3500 houses are flooded. Newport, Covington and Dayton, Kentucky, are the most affected.

Looter Killed by Guard. COLUMBUS, O., Mar. 29.—The work of searching parties in the Scioto flood district today increased the list of bodies recovered to 56. Military authorities here allowed hundreds to return to their homes. A looter was shot dead by a militiaman today and the body dropped into the water and has not been recovered.

Appeals for Help. COLUMBUS, O., Mar. 29.—Governor Cox in a proclamation today says the Ohio river is likely to reach its highest stage in history and appeals for help.

Shipping ore is being taken from the Case lease and the Causten lease on the Crown hills, the Codd lease and the Friedman lease on the Crown Point and the Roy Ridge lease on the Eldafira. These properties are stacking their ore preparatory to shipping it over the road now being constructed between Rochester and Orona on the line of the Southern Pacific.

Practically all of the leasers on Nenzel mountain are in ore. On the Limericks adjoining the Nenzel holdings leases have been given and this property will soon be shipping again. Already shipments have been made from the Limericks but owing to litigation, work was stopped. This litigation having been settled, work has again started on the property.

On Lincoln hill two miles to the west, gold ore is being sacked, high grade in quality. Only thorough development work on this hill can disclose the real value of the deposits.

During the past two weeks mining engineers representing large interests in both the east and west have been making careful examinations of the district, sampling the ledges and rendering reports which have brought their superiors to also view the district. There will be another hundred men put to work in the next month on the various leases and properties in the district.

BURNS IS FAVORITE OVER EDDIE CAMPI LOS ANGELES, Mar. 29.—Frankie Burns, the Jersey City bantamweight, is a slight favorite over Eddie Campi of San Francisco in a scheduled 10 round contest at Vernon today.

MEMBERS OF CALIFORNIA LEGISLATURE INSPECT LINE OF NEW ROAD.

SAN FRANCISCO, Mar. 29.—The State Belt Line railroad which now extends completely around San Francisco's water front to the grounds of the Panama-Pacific exposition was opened today. The line was inspected by most of the members of the legislature who later watched a review of troops at the Presidio, and later were dinner guests of the Exposition commissioner.
