SMOOT ATTACKS WILSON ON HIS TOLLS REPEAL

WASHINGTON, May 14.—Declaring the administration demand for the repeal of the Panama canal toll exemption was "unworthy of sons of the revolutionary fathers," Senator Smoot, of Utah, today argued vigorously against the repeal bill. "The attempts that are being made in our country and by our own citizens to convince the American people that the United States is violating its treaty obligations, and is looked on by other nations as lacking in national honor, I repudiate," said Senator Smoot.

"The constitution confers on congress," he went on, "the power to regulate our domestic commerce and in doing so we are not subject to the charge of violating our treaty obligations. Senators, have you stopped to think that the assaults on our national honor come from within and not from without?"

"I want the United States to enjoy the respect of all the nations of the earth, to live in peace and to maintain a desire to accord equal justice to all. If we must purchase foreign friendship, the price exacted must not involve us in national dishonor."

When Your Eyes Need Care Try Murine Eye Remedy

PROPOSE LEACHING PLANT FOR CONTACT IN ELKO COUNTY

BELIEVED DEVELOPMENT AND PERMANENCY OF CAMP THUS ASSURED.

The outlook for a leaching plant to handle the ores of the Contact, Nev., district, is very flattering at the present time, says the Contact Miner. Word has been received of the interest that capital is taking in the projected plant and results of far-reaching importance to the future welfare of the district may be announced in a few days. Many of the outside property holders of the district have stated their intention of investing in the plant if it is necessary and desirable that they contribute toward the success of such an enterprise. We have authentic information that considerable money has already been subscribed for that purpose and a steady development of the camp is now looked for.

The formation and geological conditions at Contact are said by those familiar with both places, to be strikingly like those existing at Butte and more than one mining man from the latter camp visiting Contact has declared it would one day become a second Butte.

In a recent issue of the Contact Miner is an article by B. H. Bennetts, consulting engineer of Tacoma, Wash., on the hydro-metallurgy of copper ores, with special reference to conditions as they exist in Contact. After a general discussion of the subject, in which he calls attention to the great activity shown in the last year or two in studying and perfecting leaching processes and to the success attained along that line, Mr. Bennetts says:

"All leaching methods depend for their efficiency on local economic conditions, such as the supply of cheap electric power, cheap sulphur, etc. "Now let me touch on a point that vitally concerns the camp of Contact—that is transportation. For years past plans have been operating in different parts of the world and these plants have kept detailed cost of their operations. Suppose Contact were on the railroad; an engineer would have no difficulty in figuring on the cost of his supplies and the cost of marketing his product. Therefore I see no reason why estimates cannot be made that will take care of the cost of getting in the necessary supplies and marketing the product in whatever form it is produced.

"The percentage of chemicals necessary and the percentage of copper recovered are definite factors and, furthermore, are smaller than the tonnage of the ore treated. In other words, by treating the ores at the camp we not only save the smelting charges, but also save materially on the transportation problem. "Before concluding I would like to call attention to a feature that has lately developed which tends to reduce the cost of installing treating plants by the use of local material in the building of leaching and other vats necessary. Heretofore concrete tanks have not been available because of the action of the acids on the concrete. Experiments carried on for the past year by the Chile Exploration company at Maurer, N. J., have been so successful that the Vulcanite Paving company of Philadelphia has already sent considerable of the acid-proof asphalt mastic bitumen to Chile.

"From the information which I

have from them, I take it they would be willing to contract for the sale and application of the material to the tanks and vats.

"In conclusion, from my knowledge of the different processes for treating copper ores, I feel that the up-building and permanency of Contact is dependent upon some hydro-metallurgical process adapted to local conditions."

WON'T STAND FOR YELLOW ALFALFA

Tonopah people may not go around with hayseed in their hair, but they think they know genuine alfalfa when they see it, but the bunch had one put over them yesterday by the West Sacramento company when it exhibited a lot of alfalfa such as never was seen on the desert before.

This particular breed of grass was shown with a yellow top and the Ulsterites claimed it as their emblem, showing how even nature had rallied to their side by twisting the regular bloom of lucerne to the orange of Ulster. This sort of argument would not stand with many of the crowd of spectators who insisted that the alleged alfalfa was nothing more than a handful of sweet clover. It was no use for Manager Crane to attempt to explain that this yellow-topped hay was the latest fashion in alfalfa and that the real name of the product was "Imported Swedish Alfalfa." The boys would not stand for that sort of guff and the result was that Mr. Crane had to wire to West Sacramento to send on a bunch of some genuine blown in the grass purple top alfalfa, as he was wasting too much time trying to convince quartz farmers that the Swedish hay was fit to eat. The new alfalfa arrived this morning at the office of the company.

HUGE NUGGET STORY A PALPABLE FAKE

Under the heading, "Huge Nugget Discovered," the following fairy tale appeared in last Friday's Reno Gazette:

"The largest nugget ever found in Nevada has been taken from a property in the Disaster Peak region. It is said that the exact locality is 12 miles from Jungo. The slab of gold is worth \$12,000. It is in a safe in Winnemucca and few have seen it. A piece, however, as large as a man's fist was broken from the slab and is now in Reno, but is not on exhibition.

"The gold is rich, running probably better than \$18 to the ounce. The specimen is like a sandwich, with a layer of reddish porphyritic quartz on either side and an inch-wide streak of pure gold in the center. A large number of locations have been made and the original discovery is carefully guarded pending the beginning of mining operations."

Evidently some one "put one over" on the Gazette in getting the above published, as the story is of course without foundation and bears on its face the evidence of improbability. Not even a \$12 nugget has yet been found in the Disaster Peak region and Disaster Peak is fifty or sixty miles from Jungo. Whether the Gazette reporter was "steambotted" by some practical joker or was victimized by some lying promoter who was trying to start something for his own private and selfish ends, is only a matter of conjecture. The publication of such foolish yarns is bound to do harm and Humboldt county objects to being made the victim of such "knocks."—Humboldt Star.

PERSONAL

Comings and Goings of Local People and Others.

CHARLES KNOX, president of the Montana Tonopah, was an arrival today from his home in Berkeley.

LEONARD B. FOWLER left for home in Reno this morning, after spending four days in Tonopah and Goldfield.

J. M. ELLIS, master mechanic of the MacNamara, motored over to Goldfield this morning on a matter of business.

GEORGE SUMMERFIELD, who has been here for the last ten days, returned to his Winnemucca home on No. 23 today.

MRS. ARTHUR RAYCRAFT arrived on today's train from San Francisco, to again take up her residence in Tonopah.

JIMMY WOOD, the Smoky Valley cattleman, went out on the Manhattan stage this morning and will continue on to his home.

RUSSELL KANE, the middleweight, of Sacramento, who has been enjoying a rest at his old home, returned to Tonopah today.

A. GRANT MILLER, attorney, of Reno, who came here to attend the session of the Moose last night, returned home this morning.

CAL BROUGHER left on No. 23 today with the intention of stopping over at Lake Tahoe and enjoying the first fruits of the fishing season.

JOHN KREYDER, superintendent of the Nevada California Power company, at Manhattan, was a visitor to Tonopah headquarters yesterday.

JOE RANDOLPH, a pioneer restaurant man of Tonopah, after an absence of six years, returned to this city yesterday from San Francisco.

WILLIAM M. DAVID, of Carson City, worthy grand master of the Masonic order, will be here tomorrow evening to attend a session of the Tonopah lodge. This is his annual visit.

J. S. AUSTIN, president, and Charles R. Miller, governor of Delaware and a director of the Tonopah Mining company, are registered at the Mizpah hotel.

MRS. J. W. KUSICK, wife of the foreman of the Mizpah mine, was a passenger yesterday morning for San Francisco, where she goes for the benefit of her health.

HOWARD ISZARD, the traveling tailor known to every mining camp on the coast, transferred his headquarters to Goldfield this morning. He will return in a week.

W. L. RENNIE, president of the Lothrop Davis company, and secretary of the Hall Luhrs company, of Sacramento, arrived from the California capital this morning.

P. M. BOWLER left for Carson City this morning to appear before the supreme court in the argument of the First National bank of San Francisco against Nye county.

ARTHUR WOODWORTH, George Dugan and Bernard Flood, students of Stanford university, arrived from Palo Alto this morning and will spend their vacation in Tonopah.

COMRADE M. B. NOEL, formerly of Company C, Thirty-ninth Iowa Infantry, is back from the department encampment at San Diego, and says the citizens of that town entertained the old boys right royally.

MRS. JOSEPH CONNORS, wife of the well known hotelkeeper of Manhattan, was taken out this morning to Reno to receive expert medical attendance and to gain the benefit of a lower altitude. Mrs. Connor has been ill for some time, but it was only recently that her case took a serious turn and the change became compulsory. Mr. and Mrs. Connor arrived from Manhattan yesterday afternoon.

SEWERS CARRY OFF DANGEROUS GERMS FROM THE HOME

Spring may be regarded as the most effective time to organize crusades against the fly, for at this period many of the insects, concealed during the winter in comfortable and protected places and in a dormant or inactive condition, known as the hibernating stage, are revived when the warm weather returns and seek breeding places such as privy vaults and other places where any putrid or offensive matter may be concealed, in which to lay their eggs. It is largely in this manner that flies are perpetuated from one season to another.

The importance of destroying the flies which appear early in the year is apparent, for a female will deposit 125 or 150 eggs at a time; besides only 10 or 12 days elapse between the dropping of the eggs and the birth of the winged insects and these in turn begin to lay eggs within a few days afterwards. The number of offspring which a female fly is responsible for is incalculable. It has been roughly estimated that within two or three months this amounts to over 250,000,000. Therefore the destruction of the winged insects except at the beginning of the season is of no practical value. Although the propagation and development of the fly has not been so successfully studied as the mosquito, we have learned sufficient to know that it breeds with great rapidity wherever filth is present and disappears where cleanliness is enforced. We take great satisfaction from the fact that evidences the spirit in which these articles have been received by the general public of Tonopah, for our attention has been called to the thorough manner in which certain sections of the town have been cleaned up, as to surface filth and refuse, through the individual efforts of owners and tenants.

But it must be borne in mind that while these preventive measures are very beneficial there is but one real effective method to relieve this town from, or to greatly reduce, the number of flies that infest our community each summer and that is the ultimate removal of the privy vaults and cesspools, the breeding places of flies and other highly dangerous bacteria.

TONOPAH SEWER & DRAINAGE CO.

ATTENTION F. & A. M.

A stated communication of Tonopah Lodge No. 28 will be held Friday evening, May 15th, in Masonic Temple, at 8 o'clock. The M. W. G. M. will be present.

Visiting brothers are cordially invited.

By order of the W. M. M142t JAS. NESBITT, Sec'y.

Don't forget the classical concert given by Leonore Sollenlar Hanby at K. C. hall, Sunday, May 17th, at 3 p. m. Admission \$1.00. M143

History of Vaccination THEN and NOW

One hundred and eighteen years ago today the world's first vaccination by a physician was performed. On that day Dr. Edward Jenner, an English doctor, who had devoted thirty years to studying the subject, drew lymph from the hand of Sarah Newles, a milkmaid who had contracted cowpox while milking cows. He applied it to the arm of an eight-year-old boy, named James Phillips. It was the beginning of the conquest of smallpox. At that time smallpox was causing one-tenth of all the deaths of the human race. It had destroyed or disabled more than a fourth of mankind. It killed more than 50,000,000 Europeans during the eighteenth century. The absence of pock-marks in those days was a means of identification. The London police department issued the following description of a criminal sought in the seventeenth century:

"Thomas Bayly, a short, burly man, fair and fresh-colored, without pock-marks. . . . Before the discovery of vaccination, smallpox was as prevalent as bronchitis is today. A half century before Jenner gave his discovery to the world, the dread disease wiped out 70 per cent of Greenland's population in a single year. The Spanish explorers carried it to the new world, and three years after Cortez had landed in Mexico over 3,500,000 natives had fallen victims to the scourge. More North American Indians fell before its invasion than fell before the white man's gun. Their number is estimated as high as 6,900,000.

Today vaccination has made smallpox a negligible factor in the list of human ills. It has practically driven it out of existence as a scourge of nations. Backed by the authority of law in many countries, medical science has inoculated the civilized races and made a pock-marked face a rarity today. Before Jenner discovered vaccination England reported smallpox cases at the rate of 4,000 to every million inhabitants. Today the vaccine point has reduced the rate to 26 to each million. Universal vaccination is compulsory in Germany and the rate has fallen to less than two to a million. It is rated at one case in a million people in Sweden today. Knowing that the dread disease has killed more people than have bullets and famine combined, most of the world's governments compel its people to be vaccinated. All United States soldiers and sailors pass through the experience. All immigrants landing on our shores must be inoculated. Many states have laws that order its school children to be vaccinated. Persons who have not undergone the operation in Norway are denied the privilege of voting at any election. Both bride and groom in Norway and Sweden must certify that they have been inoculated before the minister will join them in wedlock. Every child born in Germany must be vaccinated in its first year of life and again twelve years later.
