He had a relatively high temperature yesterday, but so far as known, no serious symptoms have appeared. Pope Benedict has never known what it is to be really ill, and it is difficult for him to remain in bed. He kept on conducting the affairs of the church after the first symptoms of illness appeared, until Cardinal Gasparri's urging was successful in inducing him to take to his bed. Pope Benedict's fever is somewhat diminished, but absolute rest and quiet are still necessary for him, a news dispatch from Rome quotes Dr. Ettore Marchisiani as stating. DISCOVERY OF BORAX DEPOSIT NEAR SHOSHONE

(By Associated Press) NEWS of a great borax discovery a little over a mile east of Shoshone, Inyo county, California, and the sale of the same to the Pacific Coast Borax company for a cash consideration of \$50,000, was received in Tonopah today. The property was located by "Smoky" Dixon and a partner, whose name is not known, and after an examination had been made by Engineer Razor, representing the Pacific Coast Borax company, a deal was promptly consummated. It is stated that this borax discovery is one of the largest ever made in the west, and that it will be a great factor in the industrial field within the near future. The fact that the deposit lies so close to the Tonopah & Tidewater railroad, Shoshone the shipping point, being only about a mile distant, will unquestionably result in a great deal of activity in that locality within the next few months. Another deal that is pending at Shoshone is the proposed consolidation of a number of deposits of borax earth. It is reported that the Standard Oil company is contemplating taking over everything in that locality that savors of fallers earth, and that mining of the product on an extensive scale will shortly be in order.

TOIYABE SALES OF TIMBER ARE UNUSUALLY BIG

Statistics for 1921 show that the Toiyabe national forest is fifteenth in place for amount in board feet of timber sold and tenth in the value received for these timber sales. This is especially interesting when it is noted that this comparison is made with 29 other forests or divisions of forests, in district No. 4, and especially so when it is remembered that there is not a sawmill on the Toiyabe nor has there been for a considerable number of years. The bulk of the above timber, of course, is used for fuel around the different mining camps.

The Toiyabe stands well toward the top of the list for numbers of permittees who have made payment of their 1921 grazing fees, only four being delinquent on the final date set for payment.

Stockmen using the north end of the Toiyabe division of the forest report that beef cattle weighed out from 75 to 100 pounds heavier last season than ever before and are unanimous in their statements that removal of worthless mustang horses and holding their stock down off the summer ranges until forage plants had a chance to establish themselves is the biggest step toward improvement of grazing conditions that has ever been made on the Toiyabe. They state that the inconvenience caused them through holding their stock down in the early part of the season was very little, the gain in
