INVENTORS DON'T PATENT	
HAVE THE COMPANIES OF THE PARENT.	

Discoverers of Epoch Making Devices Tool No Pains to Keep Them.

If you look back on the history of hu man progress, you will find that non of the great epoch making inventions has ever been patented. The man who lit the first fire-whether Prometheus or the party from whom he stole the idea, did not get a patent for it. Neither did the man who made the firs wheel-in every sense one of the most revolutionary inventions in the history of man. The same thing may be said of the invention of soap, candles, gun-powder, umbrellas and the mariner's compass, or, to come down to our own day, of the steam engine and the elec-

trie telegraph. Patents are mostly concerned with small mechanical details and improve ments-it may be in candles or umbrel has or it may be in the application of steam and electricity-and by means of these patents enermous profits have been secured to second rate inventors, but the great ideas and discoveries which under he these details have been

There is a general notion that if you did not protect inventions by means of patents inventors would cease to invent, and material progress would come to a standstill. But history does not bear this out in the least. Men with great muchanical gifts do not exercise them solely with a view to commercial profit any more than astronomers search the heavens for new worlds with an eye to registering patents and floating companies on the results of their discoveries. - London Truth.

At the Wrong Nuptials.

"If any man can show just cause why these two persons may not be lawfully joined together, let him now speak or else hereafter forever hold his peace. Slowly and impressively the officiat-

ing clergyman spoke these words. The solemn pause that followed their utterance was broken by a deep, strong voice from the rear of the church:

"May I ask you, sir, to repeat the names of those two persons who stand before you as candidates for matri-

"George Washington Spoonamore and Jophenia Shaw," answered the clergyman, astonished at the interrup

"Go ahead with the marrying," re joined the owner of the deep voice chapping on his hat and starting for the "It's all right. I had just got here, and hadn't heard the names. The wedding I'm trying to stop must be in the church a block and a half below here."-Chicago Tribune.

Earnings of Golf Professionals. During the last ten years the number of gelf professionals has probably been multiplied tenfold. As at every links the supervision of a greenkeeper is a matter of prime necessity, the number of these professionals has grown correspondingly. Adding together the income derives from all sources, we may take it that the respectable professional on a good links can some times carn as much as £250 to £300 a year. A few, doubtless, make more, and there is a least one cruck ''pro'' whose income from all sources can hardly be less than £600 a year.—St. James Gazette.

He Liked One of Them. In Kuhe's "Musical Recollections" the story is told of an admirer of Rossini who sent the composer at Christmas time a fine Stilton cheese and an oratorio which the donor had recently composed. In a laconic letter of thanks Ros sini wrote: "A thousand thanks! I like the cheese very much."

A Spanish putent lasts 20 years and the device or manufacture must be made or carried on in Spanish territory within two years after the patent is granted.

Kind words prevent a good deal of that perverseness which rough and imperious usage often produces in generPICTURES BY TELEGRAPH.

A Device Invented by an Electrical Ex-

A New York inventor has perfected a device for transmitting pictures by means of electricity, like the telegraph.

from one point to another.

For years scientists and electricians have devoted a great deal of their time to trying to perfect some such method. The result of a successful culmination to these experiments would have millions in it. The royalties obtained from newspapers alone would make the in-ventor's fortune in the first decade of its use, and its gradual adoption for other uses would follow. Thomas O'Brien, an electrical expert of New York, has worked out a plan which seems to him to be entirely feasible, and he will in the near future demonstrate

its practicability or its reverse by a trial. The scheme provides for two disks, carrying needlelike points, situated in different parts of the circuit. One of these disks will be at each end of the line, and the principle upon which the points will work and be located is analogous to the interrupting points on the ecciving and sending instruments of the telegraph. The disks will be caused to move synchronously by means of electric connections to the same circuit. The negative, which contains the picture to be set, is specially prepared. The gelatin film is a nonconductor, and this will be mounted on some substance

As every one knows who is familiar with the rudiments of photography, the action of the chemicals used in the development of a sensitive plate after exposure either tears away entirely or reduces to an imperceptible thinness the film in places wherein the positive pic-ture is heavy and shadows appear. Where the high lights are the film is the thickest.

which is a conductor.

Therefore, with the negative film mounted on a copper base, the electric current would be interrupted where the film is thick, and where by the process of development it has been removed the current would pass through to the copper and become a record and passing over the wire be recorded at the

These disks will revolve at the rate of 1,000 revolutions a minute by means of mechanism impelled by electricity. The negative will be given a lateral motion of about six inches in one minute, and it will be seen that, should there be six points on the disk, 1,000 lines will have been copied during the minute and recorded at the other end of the circuit. This would mean that a copy had been obtained containing lines finer than 160 to the inch, which is made much finer than the lines of an engraving. The synchronism of the disks could be regulated by means of small induction coils, which would be influenced by small electro magnets specially connected with each other and placed around the periphery of the flywheel, governing the motion of the disks in such a manner that the impulse given the wheel would coincide with the interruptions of the circuit taking place within a certain time.—New York Journal.

Portrait Painting.

The modern practice of having por-traits of individuals seems to have sprung up naturally enough with the popularity of easel pictures, and this again was much influenced by the in-troduction of oil painting. Whether Antonello of Messina really acquired the art from the Van Eycksor from Lucas of Leyden, as some have conjectured, is very doubtful, but it was certainly he who introduced the new art process into Venice, whence it spread all over

We have now come to the full development of the art of painting that sprang up toward the close of the fifteenth century, and which was chiefly embodied in four great men-Leonardo, Raphael. Michael Angelo and Titian. All of these were great portrait painters in the true sense of the term, with the exception of Michael Angelo, who seldom condescended to easel pictures and who never

worked in oil. The great advance made by the six teenth century painters over the pre-raphaelites was in the much fuller utilization of the resources of chiaros-curo. Up to this time the colors used were mostly clear and light, and only so much shading was introduced as was necessary to give relief to the figures. The value of shadow in itself was hardly appreciated-in fact, the whole conception of painting was to show everything as far as possible in a full light.

The great innovator in this matter was Leonardo. Being, as he was, as much a man of science as painter, the problems of light and shade interested him in both capacities, and he investigated them in something of the modern pirit. By the aid of the knowledge thus acquired he succeeded in giving to his figures a roundness and a relief that had been hitherto unknown. In fact, he carried it so far that they are sometimes

overmodeled.-Nineteenth Century. Napoleon had the lavish hand of a parvenu, but his beneficiaries were not grateful, and with ever increasing insolence were always craving more. The system of private confiscations or forced contributions from individuals had already attained vast dimensions. During the winter of 1809-10 it was extended and regulated; the sums wrung from German princes and Spanish grandees, from English merchants and the Italian clergy, were not entirely exhausted; the remainder, together with what was "accepted" from timorous politicians, crafty ecclesiastics, sly contractors and unprincipled financiers, was now erected into the dignity of the emperor's "extraor-dinary domain." The term "army chest" had been devised for times of higher public morality; it was now dis-Confiscated palaces, forests, lands, fisheries, moneys from the sale of American ships—all were now the emperor's private property.—Professor Sloane's "Life of Napoleon" in Cen-

A Tallow Dip. An Englishman and an American girl at a state ball were talking over some of the people present, when the former said: "That is Lord B. who has just passed. Have you met him?"
"Yes," was the answer, "and I thought
him extremely dull." "You surprise
me. He is one of the most brilliant
lights of our service." "Really?" returned the American girl. "Then it is my turn to be surprised. His light flick-ored so when he talked with me that I set him down as one of your tallow diplomats "-San Francisco Argonaut.

More On the Question

The Free Coinage of Silver in Mexico.

A Gentleman's Experience.

Other Items of Interest Picked Up About the Metropolis of the Cepper Country.

coinage of silver in all its glory, should take a trip to Mexico," said S. G. Higgins lately. "There they have free coinage of both gold and silver, and the result is that there is no gold, practically, in circulation, although large quantities of gold are mined in Mexico. The gold is shipped to the United States mints, while the silver remains in Mexico. and constitutes the sole currency in use in Mexico except a limited amount of paper money which, however, is at a discount in most parts of the republic. Free coinage of gold and silver there results in silver nonometalism.

"During two trips to Mexico within the last three years, I have become very much interested in the silver question. because that is the main topic of conversation in the southwest and in the northern and western portions of Mexico. There are untold quantities of silver ore in sight all through that country and the free coinage of silver in the United States would give a wonderful impetus to silver mining in Mexico. There are places where the ore is found almost pure, and in very large quantities.

"On arriving on the Mexican border changed some of my United States money for Mexican money. I was surprised to receive two Mexican dollars for each United States dollar. It made no differ ence whether I offered rational bank notes, greenbacks, silver certificates, gold certificates, gold coin or silver coin, or drafts on New York, they were all called 'gold' money, and I received in exchange two Mexican silver dollars. It I banded out an American silver dollar I received in exchange two Mexican silver dollars. I had never thought very much about the silver question before, and I asked whether the Mexican silver dollar contained less silver than the United States silver dollar, and I was informed that a Mexican dollar contained more silver than the United States silver dollar. This was true not only at the border, but at all points I visited in the republic of Mexico. In the city of Mexico, 1,200 miles south of the border, a United States 50 cent piece would exchange for a Mexican silver dollar and would buy as much at any store. Drafts on New York, issued by banks in the United States, were even worth a small premium. I had with me in the city of Mexico a draft drawn by the Savings bank of East Saginaw, on a bank in New York, and signed by A. Schupp, for \$100, which I exchanged for 200 Mexican silver dollars. On the other hand, I ran across one Mexican \$20 gold piece, coined at the Mexican mint, and found that it was equal in value to the United States money, or practically so. It would exchange for forty Mexican silver dollars. It is not

very often, however, that one flads Mexican gold coin there. "The question naturally arises, why will a United States silver dollar buy two Mexican silver dollars, when there is more silver in each one of the Mexican silver dollars than in the United States dollar? The answer to this question is the key to the whole silver question. It is simply because the United States silver dollar is redeemable in gold, while the Mexican silver dollar is only worth its market value for the silver it contains. We have in the United States about \$500,000,000 of silver money, and over \$600,000,000 of gold money, and in addition about \$600,000,000 of paper money, all maintained by the government on a parity with gold. This, it seems to me, is true bimetalism. If we adopt the free coinage of silver on a basis of 16 to 1, the flood of silver will be so great that it will be impossible for the government to maintain the parity. 1 understand that even Mr. Scripps, of the Detroit News and Tribuce, admits that the free coinage of silver would reduce the country to silver monometalism, the same as in Mexico. The \$600,000,000 of gold would soon leave the country, silver to take the place of the 600,000,

and with our present mintage capacity it would take fifteen years to coin enough 000 of gold now in circulation, and the silver would only be worth 50 cents on the dollar, as compared with the present value of our currency. The avowed object of the free silver men is to increase the amount of money, but it is plain to be seen that it would result in contracting the currency more than one-third I believe in the use of both gold and silver, but in order to keep the silver on a parity with gold, it is necessary to limit the amount of silver, just as we do under our present system. There is plenty of money in the country today, but those who have it are holding on to it, until they see in what kind of money it is coming back to them. It seems to be the cause of the present depression in business is largely owing to a want of confilence in the future, and if the people vote decisively in November against the free coinage of silver at 16 to 1, and in favor of the present standard, until an international agreement with the leading commercial nations fixes the relative value of gold and silver, we shall find millions of money seeking investment all over the country. Men who have the mean to start new enterprises and thus

throw money into circulation and give

increased employment to labor, are sim-

ply waiting to see the results of the com-

ing election before they make any more

policy commenced four years ago, when the democrats declared in favor of State bank currency, and it has been intensified by the movement for free silver."-Sagi-

The Kernel.

A German farmer in Scio, seems to understand the situation pretty well. A populistic democrat was talking free silver to him the other day, when he turned and said: "Dot's all righdt. You one of them fellers be what talked free trade to me four years ogo. You say vote for us, vote for free trade, and all dings be fine and goot. I vote for free trade and see! My sheep all gone, no market for my wheat and corn and anything what I raise; every dings gone to dunder and blitsen! you shoost go to hale mid your free silver. I vote mid der republicans for protection, dot's what I

It May Do as Much for You

Mr. Fred Miller, of Irving, Ill., writes that he had a severe kidney trouble for many years, with severe pains in his back and also that his bladder was affected He tried many so-called kidney cures, but without any good result. About a year ago he began the use of Electric Bitters, and found relief at once. Electric Bitters is especially adapted to cure all kidney and liver troubles, and often gives almost instant relief. One trial will prove out statement. Price, only 50 cents for large bottles, at D. T. Macdonald's drug store.

J. B. Hunter made another balloon as cension here Saturday evening, which was perhaps not as successful as the previous one, owing to the lateness of the ascent; but certainly as exciting. The balloon did not go up nearly as high as on the first ascension neither did the parachute open as quickly, but it opened before there was any danger, and the plucky areonaut landed saiely in the Athletic Park. The balloon came down near the public library building in Calumet. A large crowd saw the performance.

McClure's Magazine for August is to be mid-summer fiction number, with stories by Octave Thanet, Stephen Crane, Chnton Ross, E. W. Thompson, and Annie Eliot. Stephen Crane's story will exhibit the hero of his successful novel, "The Red Badge of Courage," grown an old man, but still capable of a fine act of bravery; Clinton Ross's will deal with Perry's historic fight and victory on Lake Erie; and Annie Eliot's will depict a sprightly love episode in a Yale and Har-

Rev. Jesse Povey, pastor of the Congregational church at Lake Linden, addressed the meeting at the Opera House yesterday afternoon and many who attended spoke in the highest terms of the talk. It was ladies' day and a goodly number of the gentler sex were in attendance. Mr. Povey's daughter from New York, who is spending the summer at Lake Linden, and the Misses James rendered the special music, which was unusually good.

The Evelyn Gordon company concluded a week's ergagement at the Opera House last Saturday evening, when "Woman Against Woman" was presented to a crowded house. The members of the company went to Iron Mountain yesterday where they play this week.

Court North Star, No. 17, Foresters o America, turned out in a body yesterday morning and attended divine services at the First Presbyterian church, where the pastor, Rev. Daniel Stalker, preached an interesting sermon bringing out many good points of the order.

Lost, a few weeks ago, a small black and tan bound. The finder, or any one giving information where the dog is, will be rewarded by applying, after working hours, at No. 42 7 Eleventh street, Yellow Inchet
