Lester and Dell Green visited friends and relatives at Teakean and Cavendish, Saturday and Sunday.

Some of the young folks of Cavendish and Teakean attended the barn dance at Cameron Friday night and reported a nice time.

New Wheat Rust

This new rust may be distinguished from the common rust by the peculiar lemon-yellow stripes which it produces upon the leaf-blades of wheat, barley, rye, and certain wild grasses. For this reason it is commonly known as stripe rust. In Europe where it has been known for many years, it is one of the most destructive of plant diseases. If permitted to spread it may prove even more serious in the United States.

Those who have made a special study of this disease say that no effort should be spared to prevent the shipment of suspected grain for seed purposes, as spores are sometimes produced within the seed covering. Growers living in localities that are free from this rust should be very careful about the introduction of new seed. If from a region having stripe rust or if the source is unknown, the seed should be given the following treatment: The seed is soaked five hours in water at 82 degrees F., followed promptly with a 10-minute immersion in water at 129 degrees F.

The Agricultural Experiment Station wishes to learn more concerning the prevalence of stripe rust and the amount of damage which it causes under the various climatic and soil conditions of Idaho. Any one finding stripe rust or other rusts which are causing serious damage are asked to send a few leaves showing the disease to M. A. Willis Moscow, Idaho. Such specimens should be placed between folds of newspaper and then wrapped securely so that no spores can escape. Upon request franked tags may be secured which will enable such specimens to be sent free of all postal charges.

Analyzing Soils.

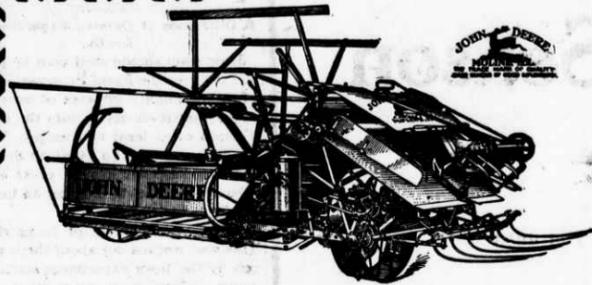

The Wisconsin state soils laboratory has analyzed soils and carefully examined individual farms in fifty-three of the seventy-one counties of the state. These examinations and soil analyses are made for a charge of \$5 for the first quarter section examined and \$3 for each extra quarter section. By combining in groups of five or more the charges are reduced to \$3 for each extra quarter section. By combining in groups of five or more the charges are reduced to \$3 for the first quarter section examined, with all additional charges at the rate of \$2 for each 160 acres. The report prepared for each farmer outlines methods for the permanent improvement of the soils examined.—Wisconsin Station.

Plow Harness Paralysis.

The misuse of the back band may seriously injure a valuable horse, and this is most likely to occur in plowing. If a plow shows a tendency to run too deep make the adjustment at the clevis, not by hooking the trace chains up so they pull down on the back band. The loin of a horse is the weakest part of his back because there are no ribs underneath to support it. Undue pressure placed on it may cause permanent injury through paralysis of the hind legs. All of the pull should come directly from the horse's shoulders.

Hog Pasture.

For supplementary hog pasture early varieties of cowpeas or soy beans may be planted May 15 by seeding broadcast or in rows. When the first pods begin to ripen, usually about the middle of August, the crop is ready for pasture.

OUR HAT IS STILL IN THE RING.

and we are doing business in the same old stand and we expect to stay there

We Make The Price, And Others Follow.

JOHN DEERE - The Better Binder

The first binder to be equipped with a practical, quick turn tongue truck. Not necessary to back binder at each turn to cut square corners. Ample clearance and flexibility of axle give smooth operation under rough conditions. Better throughout because of bigger drive and grain wheels, unusually strong main frame and elevator, special shaped slots for heavy canvases—light draft, clean cutting, positive elevating and accurate cutting.

Place your order, we can save you money.

SEE US regarding your wants in the hardware lines. We have the goods and we make the prices that will sell our goods.

The JOHN DEERE-DAIN MOWER

The mower with the compensating Gears—the simplest and quickest transmission of power from axle to knife. Gears hold each other in mesh always. That is why the John Deere-Dain cuts successfully longer than any ordinary mower.

Price - - - - - \$58.00

The JOHN DEERE SULKY RAKE

The self-dump rake with the lever of Positive Control. With the lever the teeth can be set so as to gather all the hay or only the clean hay, leaving the trash. They can be adjusted as many times as desired without stopping raking and without operator leaving his seat.

10 foot Rake 33 Teeth - - - - - \$35.00

The Red Cross Pharmacy

H. W. BUSSE, PROP.
PRESCRIPTION SPECIALISTS
HIGH GRADE CONFECTIONERY

KENDRICK, IDAHO. June 2, 1916.

To our friends and customers.

As you know, the biggest appeal a neighborhood pharmacy can make for your patronage is to be able to render dependable service. Not the kind that reads well and never pans out, but the kind that is judged by what it actually does under test.

We acquired our present store in April 1915 and made up our mind then, that we would do our level best to have what folks wanted; to have it of good quality and to conduct the store so that our customers would rather trade here than anywhere else.

We want you to feel that the Red Cross Pharmacy is your Pharmacy and that you are at liberty to go the limit in asking favors. Nothing pleases us more than to hear that someone said, "Oh, let's go to the Red Cross Pharmacy, they are so accomodating over there." Do you know that a little thing like that causes us to believe that our ideals are being realized. Ours is a community Drug Store; our chief claim for your business is to have what you want, when you want it, whether it is a prescription, a look at the dictionary, a telephone call, postage stamps or a pint of ice cream and when we tell you that we'll deliver at two o'clock or five o'clock or six o'clock, you may bank on it being there on time. If at any time you can think of a thing we've forgotten or neglected that would make our store a better or more reliable place for you to trade, we will appreciate the information.

Yours for service,
H. Busse.

Chamberlain's Colic, Cholera and Diarrhoea Remedy

This is a remedy that every family should be provided with, and especially during the summer months. Think of the pain and suffering that must be endured when medicine must be sent for or before relief can be obtained. This remedy is thoroughly reliable. Ask anyone who has used it. For sale by all dealers.—Adv.

Camp Fire Girls

The Camp Fire girls met at the Presbyterian church at 7:30 Saturday evening. Only a few were present but a very interesting meeting was held. Plans were made for our Ceremonial meeting next week and for our dresses, a book having been received which gave the girls some very good ideas for them.

Our record book has come and every girl is much interested in her plans for filling it out.

Refreshments were lacking to complete the splendid meeting some people thinking they were more hungry than we were took the refreshments.

We hope to have a large attendance next week and perhaps some one to guard the eats—who knows. A Camp Fire Girl.

Restored to Good Health

"I was sick for four years with stomach trouble," writes Mrs. Otto Gans, Zanesville, Ohio. "I lost weight and felt so weak that I almost gave up hope of being cured. A friend told me about Chamberlain's Tablets, and since using two bottles of them I have been a well woman." For sale by all dealers.—Adv.
