Methodist Church

The Childrens' Day program at the M. E. Church last Sunday morning was splendid. The children all did fine. Miss Mable and Cordelia Emmett deserve credit for the work they did in training the children and preparing the splendid program.

On July the 10th, the fourth and last quarterly conference will be held for this year at Kendrick, and will take this occasion to say we want to have an all day service which will be held in the grove on the Knepper place up Brady gulch. Let everybody look forward to this time, prepare a lunch and be on hand and we will have a picnic quarterly conference, a good speech or so and a general good time. We expect Fair view and American ridge to be well represented.

First and third Sabbaths American Ridge at 11 A. M. and Kendrick at 7:30 o'clock second and fourth Sabbath. Kendrick at 11 A. M. and Fairview at 7:30 P. M. Prayer meeting at Kendrick every Wednesday evening at 7:30. Choir practise Thursday. 7:30 P. M.

J. J. Matney, Pastor

FOR SALE: 1 bay gelding 4 years old weight 1400; 1 filly 3 years weight 1300. J. J. Lutsch. 25-4t

Hand work makes me—
Head work buys me.
The Pusch Hand Made only at
The Red Cross Pharmacy.—25-tf

Why

do you pay your nickle for an inferior cigar, when you can purchase the Pusch Hand Made for a jit.
The Red Cross Pharmacy. 26 tf

Bilious Attacks

When you have a bilious attack your liver fails to perform its functions. You become constipated. The food you eat ferments in your stomach instead of digesting. This inflames the stomach and causes nausea, vomiting and a terrible headache. Take Chamberlain's Tablets. They will tone up your liver, clean out your stomach and you will soon be as well as ever. They only cost a quarter. For sale by all dealers.—Adv.

At your service in the soda fountain line.
The Red Cross Pharmacy. 26-tf

FOR SALE—Caladonia Bean Cutter, been used only 4 days.
Frank Frederickson.—25-tf.

Bring It In.

No. 146 the lucky number which drew the Electric Iron last Saturday.
The Red Cross Pharmacy. 26-1t

WHAT?

The Camp Fire Girls will sell ice cream and cake.

WHERE?

At the home of Mrs. Patton.

WHEN?

Saturday afternoon and evening, July 1st. Everybody welcome. Everybody come. 26-1t

Advertised to the nation, smoked, by all creation, the Pusch Hand Made cigar.
The Red Cross Pharmacy. 26-tf

Greatly Benefited by Chamberlain's Liniment

"I have used Chamberlain's Liniment for sprains, bruises and rheumatic pains, and the great benefit I have received justifies my recommending it in the highest terms," writes Mrs. Florence Slife, Wabash, Ind. If you are troubled with rheumatic pains you will certainly be pleased with the prompt relief which Chamberlain's Liniment affords. For sale by all dealers.—Adv.

Chamberlain's Colic, Cholera and Diarrhoea Remedy

This is a remedy that every family should be provided with, and especially during the summer months. Think of the pain and suffering that must be endured when medicine must be sent for or before relief can be obtained. This remedy is thoroughly reliable. Ask anyone who has used it. For sale by all dealers.—Adv.

WYANDOTTE A FINE GENERAL UTILITY BIRD

There is no American breed that in popularity leads the Wyandotte, for the reason that that breed combines in the highest type the good qualities which go to make up a general purpose fowl, writes M. K. Boyer in the Knickerbocker Press.
I am not saying this to the detriment of the Plymouth Rock nor the Rhode Island Reds nor any other breed. They all have a noble mission, but I do say, without a bit of hesitation, the Wyandotte breed is today the farmers' fowl.

Bradshaw, the well known Australian poultry expert, says he has been a patient observer of Wyandottes ever since their introduction into that country, and although he does not say they are the best of all and the only breed, he does maintain that they have every essential factor which goes to constitute them a most profitable breed to keep and highly deserving of the highest position among the several breeds embodied in the comprehensive nomenclature of farmers' fowls.

J. Penfold Field, a celebrated English authority, says the Wyandottes are par excellence the farmer's fowl. The late Joseph Wallace said the Wyandotte, although not excelling in

The problem of feeding hens is a great one. The bird needs certain constituents, such as mineral food, nitrogenous food and carbonaceous food. All of these are found in the grains, in corn, wheat, oats, buckwheat and barley. But all are not found in any one grain in the proper proportions. So we add animal feeds and green feed. Follow nature and you will go rightly. She supplies bugs, worms, greens, grains, minerals, exercise and fresh air. The picture shows a bunch of half grown pullets on clover.

any special quality, is the happy possessor of an even and well balanced organism, which makes it preferable to the majority of breeders over breeds excelling in some points and deficient in others. It is the equalization of useful qualities in the Wyandotte which makes it so popular. There is no excess of one quality at the expense of the other.

Mr. Bradshaw says that one important feature of the breed is the fact that, being rather short legged and cobby in build, with consequently finer bones and smaller carcass than the Langshan, Rock or Orpington, when the latter three breeds, but particularly the first two, are growing a framework of bones, on which later on to place a big carcass of meat, the Wyandotte is growing flesh and bones at the same time, and if caught at any time during the second, third and fourth month the Wyandotte will be plumper and fatter than the other breeds and always in killing condition within the above period and if well fed from hatching to killing time will require no special fattening for the market.

Now, it is not only as a table fowl that the Wyandotte excels. As a steady layer, as a producer of good sized, good shaped and good colored eggs it has no superior in the American class. As a winter layer it has proved itself to be excellent, and in the yards of the writer, tested alongside of Barded and White Plymouth Rocks and Rhode Island Reds, it not only led in the race of winter egg production, but it did so without hurt, for it partook of and assimilated more food than any of the other varieties and that, too, without laying on fat.

Cavendish Items

We have been having a nice little rain but the bean men would like to see the sun shine again.

D. H. Daniels moved back to the city again.

LeBaron brothers sold a bill of lumber to Odis Linn. The lumber will be used for a large barn.

Several from Cavendish motored to Dent Sunday.

Will Resse and family returned Thursday from Miles City, Montana.

Fred Daniels arrived home from Montana, Friday. He says Idaho looks good to him.

Carl Bloom will have a sale and start for Canada next week.

Bruce Dancy, Andrew Peterson and Mitch Blackburn made a business trip to Kendrick Thursbay.

A Home Made Fireless Cooker

An advent of warm weather makes the housewife dread the long cooking processes and renders the fireless cooker even more desirable than in the cooler season.

The following will be found to answer the purpose. A candy pail or butter tub makes the outside. Inside this is fitted a galvanized pail leaving a two inch space. The intervening space should be filled with ground cork, shavings, sawdust, or even chaff. The cover of the candy pail should be built downward and also filled with the insulated material. A second cover is fitted just below the rim of the galvanized pail extending to the sides of the wooden bucket. This covers up the insulating material. It may be made of wall-board or thin wood.

Cooking vessels can be purchased at almost any hardware store at a small cost. It is usually found best to use one stone below the cooking vessel and frequently one above. These are heated on the stove and with the heat of the hot vessel will continue the cooking process for several hours. Well shaped stones or even hard brick will answer tho the usual soapstones are better.

How a teacher of 60 pupils in a one-room schoolhouse, located in the forests of North Carolina, succeeded in getting her pupils interested in practical agriculture with a pig and less than an acre of uncultivated land, is told in a report of one of the field workers of the department.

A farm paper offered a pure-bred pig as a prize for securing a certain number of subscriptions. This energetic school-teacher set out among the parents of her pupils and succeeded in selling enough subscriptions to win the pig. When the pig arrived the pen was already built by the school children on the school grounds for its reception. The parents were invited, and talks on pig raising were made. The rest of the day was spent in driving around to some of the best pig farms in the county, where various kinds of live stock were scored and discussed.

The pupils learned that a pig could not thrive entirely on scraps from lunches and occasional ears of corn. An interested member of the school committee offered the use of his team and implements, and the pupils started to work clearing the forest land to crops of rye, wheat, rape, and grass to afford the pig grazing plots of green forage. A cold frame was also put in, and cabbage plants were grown for sale, the money thus realized being turned over to buy whatever additional feed was needed to keep the pig.

As a result of the interest aroused, tax-payers and members of the school board have given their support to the establishment of a small demonstration farm. More land is to be purchased, and the county agent is to visit the school each week. Since the pig was brought into the school, less than a year ago, the membership of the county pig club has more than trebled.

SPRING PREPARATION.

Don't burn corn or cotton stalks. They furnish the land with soil fertility as well as soil ability and lessen danger from drought. Don't plow land the least bit too wet. It makes sun dried bricks, kills soil bacteria and lessens production some times for years. Don't do it. Remember that preparation is half of cultivation and far easier, cheaper and better done before than after planting. Hurry is often like worry. It doesn't pay.—Farm Progress.

ROMANS AS DRY FARMERS.

They Garnered Rich Olive Crops From the Hot African Sands.

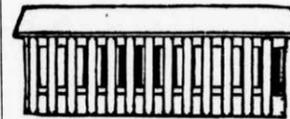

The problem of dry farming with which our western farmers are struggling was faced also by the ancient Romans and handled by them in a manner from which we moderns can borrow many a suggestion. When the French took control of Tunis they found established there, a legacy from the Roman colonists of old, a system of dry farming as perfect as anything achieved by modern experiments in Australia, South Africa and our own west. Professor J. Russell Smith of the University of Pennsylvania has made a first hand investigation of this remarkable archaeological puzzle, which he describes in the Century in an article entitled "The Dry Farmers of Rome." He says in part:

"Plainly the Romans were master dry farmers to succeed under conditions worse than those under which we have failed. How did they do it? Can we not copy them? Fortunately, we can copy them, for they succeeded by the very simple device of growing tree crops. Since our dry farming has failed with grain crops on ten inches of rain and upward and theirs succeeded with tree crops on ten inches of rain and downward, the lesson is most plain. We, too, should grow tree crops.

"The secret is not hard to find. The perennial plant, of which the tree is the highest type, is nature's great implement for fighting aridity. If there is deep water the tree will send its roots for it. Recently an artesian well digger in Arizona brought up the live root of a small bush from the depth of eighty-three feet. If there is surface water at almost any season the perennial desert plant will seize it as a hungry dog seizes a bone and keep it securely for months or even years, supporting life and if possible maturing a crop of seed. Many and interesting are the devices by which plants have modified themselves to get and hold water in the fierce and merciless processes of adaptation, natural selection and survival. The olive, for instance, is a deep rooter in moist subsoil or a far-reaching, shallow rooter if there is no water in the subsoil. Its leaves are glazed above and hairy beneath. If undisturbed the foliage will completely shade its trunk, thus protecting it from the rays of the sun. Given one good drink, an olive tree has shown its ability to survive two rainless desert summers with only a single shower between. That is why the dry farmers of Rome succeeded 1,500 years ago, and their successors are succeeding now, while our farmers have often failed through their dependence on the quick growing, quick perishing annuals."

Poultry Feed Trough.

The difficulty in keeping poultry feed clean and dry during continued exposure can be largely overcome by using troughs with slatted sides and broad, detachable roofs. The troughs are from six to ten feet long, with sides five inches high, says a Missouri exchange. The lath slats are two inches apart, and the troughs are sixteen inches high from floor to roof. The roofs project about two inches at the sides and effectually keep out the rain

except when high winds prevail. The roof is very easily removed by lifting one end and sliding it off endwise. The trough can then be filled and the roof drawn back into place without lifting it. This arrangement is economical of feed, keeping it in good condition and avoiding waste. When dry mash is used there may be considerable waste by the finer parts being blown away, and on this account the dry mash trough should be put in a sheltered place out of the reach of the wind.

Increase In Nut Growing.

The pecan, the chestnut and the hickory nut are the only native nuts domesticated, but sometimes forest and waste places can be planted not only to the nuts named, but to improved varieties of acorns, beechnuts, butternuts, filberts, hazels, chinquapins and nut pines, to utilize waste lands, to diversify diet and to furnish articles of food that can be shipped long distances and be kept from year to year. The fad of today which substitutes nuts for meat may become a necessity tomorrow. Meanwhile it is interesting to note that the pecan has become within a few decades so important a crop that optimistic growers predict in another half century that pecan groves will be second only to the cotton fields in the south. There are sixty-seven varieties, of which more than a million and a half trees have been planted.—U. P. Hedrick, New York Experiment Station.
