The QUALITY STORE

THE PURE BRED SIRE.

In 1889 a Lacrosse county (Ill.) farmer decided that his ordinary beef and milk cows were not paying, and so he purchased the best pure bred sire he could get of the breed desired and mated him with his herd, which was of mixed breeding. By keeping careful records he found that the cows resulting from the first cross produced the first year, on the average, 212 pounds of butter fat. By continuing the use of a pure bred sire of the same breed he increased this amount to a 268 pound average at the end of the ninth year. In 1913 in his herd of twenty-five milking cows none produced less than 400 pounds of butter fat and several produced 600 pounds.

Instead of munition stock the public may soon be buying stock in potatoes.

Protection

There is nothing too good for any member of your family when sick.

In fact as far as medicines are concerned, none but the very best should ever be given to a sick person.

If people would follow this advice strictly and to the letter, there would not be so much sickness, neither would it cost so much to be cured.

Everyone of our medicines is absolutely pure, full strength, and is made right, because we make it ourselves.

You want our medicines and service when you are sick.
