HOW TO VALUE A MINE.

With the news that John Hays Hammond's proposal to take charge of the Independence gold mine had been accepted by the London owners came the report that the mine had been "worked out." This statement had been made many times before, and much doubt existed in the minds of interested parties when Mr. Hammond's latest report was received, says the New York Tribune. This document showed that the property which for a long time yielded a 40 per cent dividend on a large investment, was still rich in ore, and capable of producing large profits. Mr. Hammond said that the "ore in sight" warranted him in guaranteeing a dividend of ten per cent or 488,000; and that would leave about \$500,000 out of the year's deposits to be used toward the further development of the property and locating new ore beds.

The phrase "ore in sight" is one that is well understood by people who are interested in the mining business, but is misunderstood by the average layman. The ore is not "in sight" on the surface, but its existence is established by a series of operations which are in many instances exceedingly difficult, expensive and laborious.

Speaking on this subject, Dr. A. R. Ledoux said: "There is no way to determine the existence of gold ore, its quantity, quality, or anything about it unless one gets on three sides of the deposit, and even then there is an element of uncertainty about it. Ore in sight is what has been found after 'blocking' out a certain section of ground. The blocking is accomplished in various ways in keeping with the nature of the ground. Thus, by sinking a shaft of 20 feet in width 100 feet into the earth and then running a level from this, say 200 feet, to another shaft the same depth and width as the first, and then taking samples of the ore or rock from all parts of this block one would have a good idea of the yielding qualities of that particular block. This block would be 400,000 cubic feet, or about 20,000 tons, and the assays from the four sides, the two shafts, the tunnel and the surface would be the 'gold in sight.' The center of the block, which cannot be reached until actual operations are begun, might yield much more than the assays indicated, and, on the other hand, it might be found worthless or barren rock. In cases where the block is 100x200x20 feet would be deemed insufficient for determining the value of the mine, another block of similar size may be laid out below or beyond the first, and by this series of blocking the value of the mine as a gold producer is estimated. It is a well known fact that gold is often deposited in 'shoots' that are in oblique and tortuous direction from the surface, and one must be posted on the geology of the country to arrive at a correct estimate of the value of the land that has been looked out. A shaft, for instance, may run for 100 feet through rich ore and another parallel shaft 200 feet away may not strike any ore until a depth of 100 feet or more has been reached. The next shaft 200 feet away may have to be sunk still further before the valuable rock is reached and this would indicate that the shoot runs diagonally from the surface. This is only one of the many benomens in the matter of gold veins that present themselves to the miner, and no set rule can be followed in order to locate the valuable ore or to determine its extent. But the term 'gold in sight' or 'ore in sight' is usually applied to the block or to the series of blocks which has been examined and assayed on three sides."

A Convincing Argument.

Tit Bits: In County Sligo, among the hills, there is a small lake renowned in that region for its fabulous depth. A professor happened to be in that part of Ireland last summer, and started out one day for a ramble among the mountains, accompanied by a native guide. As they climbed Pat asked him if he would like to see this lake, "for it's no bottom at all, sorr."

"But how do you know that, Pat?" asked the professor.
"Well, sorr! I'll tell ye; me own cousin was showin' the pond to a gentleman one day, sorr, who looked incredulous like, just as you do, and me cousin couldn't stand it for him to doubt his word, sorr, and so he said, 'Begorra, I'll prove the truth of me words' and off his clothes and in he jumped."

The professor's face wore an amused and quizzical expression.

"Yes, sorr: in he jumped, and didn't come up again, at all, at all."
"But," said the professor, "I don't see that your cousin proved his point by recklessly drowning himself."
"Sure, sorr, it wasn't drowned at all he was. The next day comes a cable from him in Australia asking to send on his clothes."

A Practical Man on Trib.

The following is from the Virginia Enterprise:
No veterinarian on the Pacific Coast has had a longer experience, nor has any man had a more successful practice with horses, than has Dr. Burns of this city. He makes the following statement:

A valuable mare driven by Supt Lyman of the Con. Virginia Mine on the Comstock Lode, has been in the stable unable to work from the kick of another animal, received on the inside of the right fore leg above the knee. The skin had been broken and the muscles and tendons severely bruised. During a week's time I had given the limb such treatment as, from thirty years professional experience, I thought beneficial; but without avail. The leg was swollen to nearly twice its natural size, and the swelling would not yield to treatment. On Thursday evening, June 18, 1896, I made the first application of the liniment Trib, thoroughly rubbing in half of a six ounce bottle over the whole leg. I applied it regularly twice a day for the next three days. On the fourth day the mare went to work, completely cured—the most surprising and satisfactory cure coming under my observation during a lifetime devoted to the treatment of horses.

That was several years ago, I have since then used this liniment regularly in my practice. Trib fulfills all it promises.

An especially valuable feature of Trib is that, while it has all penetrating strength of the most powerful liniments, it does not blister.
For love of the horse, and the fellowship of horsemen, I offer this testimony. I know that Trib will benefit both.

Virginia City, Nevada.

Vice-President T. E. Gibbon of the San Pedro, Los Angeles & Salt Lake, also chief counsel of that company, arrived in the city late last evening from Los Angeles. He was accompanied by Attorney C. O. Whitmore, who went out on the road to meet him. Mr. Gibbon stated last evening that he had nothing new to communicate. The details of letting contracts, purchasing material and equipments and working on the grade east of Los Angeles having been already detailed in The Tribune. He is here, he added, to go over legal matters with Mr. Whitmore to prepare for the Land office hearing and Circuit court trial at Carson, Nev.; on the 11th and 12, respectively, and the trial at Pioche on the 21st. Mr. Gibbon states that everything pertaining to the road is in the most satisfactory condition, and work in all departments is moving along just as fast as circumstances will permit.—S. L. Tribune.

For burns and bruises Trib is chief; From every sprain it takes the pain To muscles sore it brings relief; And for the "hoos" it is the boss.
