

Imported and Home Bred Short Horns

40---HEAD OF CHOICELY BRED CATTLE---40

OSCEOLA, IOWA,

SATURDAY, JUNE 19TH, 1920

This offering is made up exclusively of cows and heifers, and 10 of these are selling with calves at foot. The Scotch tribes represented are: Kilblean Beauty, Marchioness, Missie, Butterfly, Duchess of Gloster, Lavender and Crimson Flower tribes.

Among the nice things selling are: Imp. Milleroig Marigold 7th, a daughter of the noted bull, Gartley Landseer; Imp. Duchess Julia 4th, with a cow calf at side and rebred; Imp. Lawton Annabel, in calf to our great bull Homewood Sultan; Imp. Drummond Broadhooks 12th, a richly bred Broadhooks; Imp. Ruby 3d, a very excellent red roan heifer; Imp. Lucile, one of those rare Longmore Catalonias, will have a calf by sale time by a son of the great Gainford Marquis; Imp. Hildred Ramsden 2d, a wonderfully well bred Miss Ramsden. She will have a calf by sale time by Imp. Boyndee Deoden, a well bred Marr Goldie bull. There will be two granddaughters of the celebrated Gainford Marquis in our sale. A number of these are bred to Homewood Sultan, a grandson of Imp. Whitehall Sultan and out of a daughter of Imp. Fancy's Pride.

One of the greatest offerings ever sold in southern Iowa. We are selling 10 open heifers in the sale and they are very choice. Good breeding, good cattle, and sold with a 60-day retest.

Osceola is on the main line of the C. B. & Q. between Burlington and Omaha, and 57 miles south of Des Moines. Breeders coming from the Maryville sales can leave there at 8 p. m., stay in Creston over night, and go to Osceola on the morning train.

OUCH! SUCH PAIN!

It Takes You Right in the Back!

SOMETIMES IN THE ARM, HIP OR FOOT

It's all due to an over-abundance of that poison called uric acid. The kidneys are not able to get rid of it. Such conditions you can readily overcome, and prolong life by taking

Dr. Pierce's Anuric Tablets. This can be obtained at almost any drug store, in tablet form.

MONDAMIN, IOWA.—"For over one year and a half I was afflicted with what the doctors called neuritis in both arms, shoulders, back of neck and head. I took treatment from most all kinds of doctors also at the Spings, but I found no relief until I commenced taking

Dr. Pierce's Anuric Tablets. I had not taken them over thirty days until I got relief. I continued taking them for several weeks and am now feeling fine and can do my work without any pain or trouble, altho I am 75 years old.—J. A. YOST, Route 2.

Farm Bureau Notes.

So many questions have been asked me in regard to the diseases of the peach and plum trees that we are here giving in detail an answer that will apply to two of the most prevalent diseases. Peach trees are seriously affected this year with leaf curl which is a fungus disease. It causes the midrib of the leaf to thicken and this is followed by a curling of the balance of the leaf giving it a wrinkled, thick appearance. The leaves have a yellowish appearance with a tinge of red. This disease can be controlled by one application of lime sulphur put on as dormant spray in early spring just before the buds begin to swell. The spray to use should be one gallon of lime sulphur to fifteen gallons of water. Nothing can be done now to stop the ravages of this disease this year but you had better get your spray material ready and be prepared to fight it next spring. It is dangerous and useless. You will burn your fruit and damage your trees if you apply this mixture now. Be ready next year.

A very serious disease of the plum this year is a disease known as plum pocket, a disease very similar to peach leaf curl. The plums become enlarged and wrinkled, with a hollow center. The color is yellowish or reddish. Pruning and spraying with the dormant spray same as for peaches and at the same time of year followed by a second spray just when the blossoms fall with a lime sulphur solution same as for apples will be found very effective. It is as stated above impossible to do anything with either of these diseases this year now but steps may be taken to prepare for next year's ravages which will be sure to follow. It is with deep regrets that we have not been able to secure material for spraying in time for dormant and first spray this year but owing to the switchmen's strike all freight was tied up until it did not arrive on time. Hope this may be avoided next year. Another disease that is very prevalent this year is the early blight of potatoes, which causes the tips and edges of the leaves to wither and dry up or curl up. This may be controlled by applying bordeaux mixture composed of four pounds of unslacked lime, four pounds of blue-vitrol and fifty gallons of water. Spray all vines thoroughly preferably in the late afternoon while foliage is dry. If you are bothered with potato bugs use one pound of paris green or one pound of lead arsenate powder or two pounds of lead arsenate paste to fifty gallons of water. Spray all plants thoroughly with this mixture. The farm bureau office has a supply of lead arsenate which can be had by members at wholesale price in small quantities. Apply in the evening if possible as it tends to burn the plants if applied while the sun is too hot.

Arrangements are being made to complete the details of the summer culling of poultry and all parties wishing some of this work done should communicate with the county agent's office at once. A specialist is being secured for this work and will probably be ready to begin work by July 5th to 10th. So many calls are coming for this culling work that we can in no case accommodate all parties but will take applications in order in which they are received. This specialist can cull on an average three to four flocks per day and will be here for a period of one week so get in your application

if you wish some of this work. Now is the time when all roosters should be taken to market if you can possibly spare them as it will insure an infertile egg that is a much better market product than the fertile egg. Don't forget to swat the rooster.

Many inquiries have come to us in regard to the best spraying dope for milk cows and we are here giving you a recipe that if mixed properly will give as good results as a high priced patent article that costs ten times as much.

4 1/2 quarts of coal tar dip.
3 quarts of coal oil.
1 1/2 quarts of oil of tar.
4 1/2 quarts of fish oil.
3 quarts of whale oil.

Dissolve 3 pounds of laundry soap in water, add the ingredients of the spray and bring the whole up to thirty gallons with lake warm water. It will keep off the flies and keep hair from becoming harsh. Spray twice a day. Now is the time of year when the flies do a great deal of damage especially to dairy cows and cattle that are on feed. This spray may be applied at a cost of one cent a day.

Many inquiries are coming in regard to best remedy for chicken mites and we are herewith giving you three different remedies that are good if applied properly. Dissolve one pound of laundry soap in one gallon of soft water. Churn to a thick creamy consistency with your spray pump, add one gallon of kerosene and twenty-five gallons of water.

Another good one is 2 parts of crude 1 part stock dip, 25 drops of kerosene, 40 gallons water.

You can also use 1 1/2 pecks of hydrated lime, 2 pounds common salt, 3 gallons lime sulphur or 1 gal. stock dip to 40 gallons of water. Paint all roosts with any of the above four to six times during the season. The painting or spraying should be done in pairs one following the other in five or six days. Mites hardly ever stay on the fowls during the day time so very effective control measures can be effected by treating the hen house and roosts without disturbing the fowls themselves in the least.

For poultry lice use the following:

Three parts of gasoline, one part of crude carbolic acid or stock dip. Mix liquids thoroughly and add as much ordinary cement or plaster of paris as liquids will absorb to make a crumbly mass. Spread out and allow gasoline to evaporate. This will give you as much lice powder for 25 cents and as good as you can buy for \$10.00 in patent medicine form. In fact it is one of their own receipts. The application of the lice powder should be made in pairs 10 to 14 days apart.

The Better Way
Never disobey Nature's warning. It's far better to forestall weakness with nourishment that protects.
Scott's Emulsion
after meals for child or adult, is a wonderful help in forestalling weakness. Ask for Scott's.

AUTO RUNS WILD DOWN STEEP HILL.

Brakes Refused to Work And Car Tumbled Over Several Times.

Sunday being such an ideal day for auto driving, Miss Mabel West asked the consent of her uncle, Sheriff Ed West for his almost new auto that she might take the family out for a ride. Those who went for the drive were: Mr. and Mrs. A. J. West, S. I. West and Jack West of Weldon, a grandson who was visiting at the West home. The sheriff knew that the brakes on the car were badly worn but did not inform Mabel of the fact, thinking that she knew it, as she had driven the car before. When they reached Squaw Creek hill about six miles north of Osceola and started down the incline, Mabel tried to throw the gears from high into low, letting the engine do the holding, but missed and got into neutral and as the brakes would not work, the car became unmanageable and went wild down the hill at a terrific rate, crashing into the iron balustrade on the corner bridge below, the car and occupants going on off of the side of the bridge into the mud and slime of the creek beneath. Jesse Schaefer happened along at the time and picked up the occupants and brought them to town. They were a bruised up, scratched up and bloody looking bunch as they had received some pretty bad looking gashes, as the car turned over several times and threw them clear of the auto except Mabel who stayed with the wheel. Mrs. West was unconscious when heister and did not regain herself until about 5 o'clock in the evening, and it is not yet known how critical she might be injured, but the rest will be alright in a few days it is thought. The car was a wonder how any live to tell of the incident. The sheriff went out Monday afternoon and brought to town what was left of the auto. This was a terrible auto accident one of the worst ever happening before in Clarke county and one which none of those who were in it care to ever experience again, however, they all came out fortunate under the circumstances, and the exceedingly bad place in the road where the mix up happened. Three doctors were called to the West home where they administered surgical and medical relief to the injured. Mr. and Mrs. A. J. West are 78 and 75 years of age and a tumbling around like this is hard on them. Mrs. West however who was the most seriously injured is now getting on nicely.—Osceola Tribune.

Lightning Freaks.

The Electric Shop is in possession of some specimens of the phenomenal action of the lightning last Tuesday morning. About three and one-half miles south of Grand River the lightning struck and severed one of the wires the two ends falling to the ground on the edge of a field. The strong current continued to pass from one end to the other through the black mud of the field, and when the spot was reached the next day the mud through which the current passed was entirely petrified. The stones thus formed are hard and where the wires touched are smooth and glassy. The heat must have been very intense indeed to do such quick work. Had not the cause been known, it might be supposed to be the work of ages.—Lamoni Chronicle.

BRIACEA

A Wonderful Medicine

The scientific blending of reliable vegetable remedies of benefit to persons who suffer from—

Nervousness	Sleeplessness
Depression	Loss of Appetite
Brain Fag	Digestive Troubles

Slow Recovery from Influenza and Kindred Ailments

Are you run down? Are you irritable? Are you overworked? Then try this approved remedy and satisfy yourself of its beneficial ingredients.

Briacea is sold in original 16-oz. bottles only. Refuse all substitutes.

WESTERN ROCK SALT
LET THE CATTLE BE THE JUDGE

"I used to buy white salt blocks for my stock because I thought they were best. But one day a neighbor convinced me I was all wrong. He told me Western Rox-Salt-Block were really the best blocks produced, because they were 98% pure salt. He said, 'Put it up to the animals themselves. Let 'em have their choice of white salt or gray rock salt. Being guided only by instinct, and not by selling talks, they will choose the salt that's best for them.'"

"I made this test—and the cattle chose Western Rox-Salt-Block! Since then I've kept Western Blox in front of my stock all the time. They thrive on it, and have a higher market value. At the same time, I've cut my salt bill, because Western Rox-Salt-Block last much longer."

Western Rox-Salt-Block are made of clean, wholesome, finely-crushed rock salt, pressed into 50 lb. blocks under tremendous pressure. Will not chip or crack; unaffected by rain.
