# On the Remington and Nowhere Else

Here are two facts about the Remington which every typewriter buyer should know:

1. The Remington Column Selector adds 25 per cent. to the letter writing speed of the typist. This is not a claim or an estimate. It is a definite fact—proved and established by any number of comparative tests.

2. The Column Selector is a Remington feature exclusively. No other machine has it—or anything like it.

Oh, yes, other machines have devices which look like it, with the five keys, etc. It is easy for a salesman, who knows the supreme merit of this Remington feature, to call them "column selector" keys. But there is no other device on any other typewriter which can do what the Remington Column Selector does.

The Remington Column Selector is the only feature on any typewriter which permits instantaneous setting of the carriage at any desired point on the line.

It is the only feature which provides this setting by either forward or backward movement.

It is the only feature which provides true "express service" with no stop-to-stop movement in reaching any writing point.

And these are the features which make the 25 per cent. speed gain. Let us show you the real and only Column Selector—the Model 10 Remington.
