SIMPLE SUMS FOR SILVERITES.

Problems Which Can Easily Be Figured Out by Voters.

A farmer raises 1,000 bushels of wheat, for which he now gets \$500. With that money he buys various kinds of manufactured goods at low prices. With free colnage at sixteen to one he might get \$1,000 for his wheat, but would certainly have to pay nearly twice as much for the goods he would buy. How much would the farmer gain from a cheap money scheme which hour each day in regaling her pupils doubled the price of the things he with arguments on the political issues got in exchange for his wheat?

The Sherman silver law of 1890 prosending them home to their pa- vided for the purchase by the governrents with profound arguments in support of McKinley and gold. She charged them to tell their fathers that the election of Bryan meant the advent of 53 cent dollars and that in the to 73 cents per ounce. If the purchase the bullion will double the price of

all the silver in the world? A workingman who depends for his livelihood on the sale of his labor to an employer is now paid two dollars per day in currency based on the gold standard and kept on a parity with gold by our laws. This two dollars will buy a relatively large quantity of necessities. If this country adopts free coinage and goes on to a silver basis, two dollars will buy only one-half as much of the goods the workingman needs. Show how labor would be benefited by a policy which would cut the

purchasing power of wages in two? An investor having money to lend was approached by a farmer who wanted a loan for the purpose of buying new implements, additional stock and some fertilizers. "If you will let me have \$800 on the security of my land and buildings," said the farmer, "I will vote for a free silver law which will enable me to pay you back next year in dollars worth half of those you lend me." State how much money that investor loaned the farmer, also the

rate of interest paid. A large number of persons who complained that they were poor decided to enact laws which would make them lack of food, clothes, furniture, houses and other forms of wealth, they agreed that instead of producing the things they needed they would set men to work digging silver, which they did not need, out of the Rocky mountains. By so doing they expected that the supply of other labor products would in some mysterious way be increased How much is twice nothing, and how will the changing of silver bullion into coins make more houses, machinery or

beef? If the "sound money" vote in Vermont increases the republican majority from 21,000 in 1892 to 38,000 this year, how long will it take the sixteen to one issue to wipe out the entire democratic vote in that state?-Whidden Graham.
