THE NICARAGUA CANAL.

One of the many important questions that will come before the present congress is that relating to the long projected canal through Central America, wedding the Atlantic and Pacific oceans. The idea of constructing this canal is much older than the closing century. In 1872 a commission was appointed by President Grant, who, after a long, careful and minute study of the question, reported that the Nicaragua route possessed greater advantages and fewer difficulties than any other route known to be practicable. From a literary standpoint the interest is in a brief history of the project, and if carried out the benefits would not only flow to the U. S. but to the world at large. Commercially speaking the importance is inestimable. It would strike off nearly 11,000 miles of sea voyage from San Francisco to New York, bringing the time down to twenty days. It, and it alone, would be the industrial salvation of the fruit growing states of the Pacific, which, if a waterway is not constructed, can never hope to compete with Argentina. The soil and climate of both are about the same and Argentina has already wrested the wheat and hide trade with Europe away from California. Now she is entering the fruit-growing market and by her superior waterway is sure to make short work of California in that respect, too. From a political standpoint the value of this canal is inestimable. The late unpleasantness with the kingdom of Alfonso, and the consequent falling of the Philippine Islands in our hands necessitate the improving of our waterway in the Pacific and for the maintenance of the Monroe Doctrine the absolute control of the canal is a first necessity. The completion of the canal would be a godsend to the struggling little republics of Central America and would mean a new era in their history. Nicaragua in particular is a country peaceful, prosperous and progressive. With the canal open Central America has a marvelous future before her. The whole world in fact would benefit by it to an extent beyond computation.

A few days ago one of our staff disguised as a sixty incandescent are light flashed into the private sanctum of Prof. Lenkerd and in an interview succeeded in getting hold of the final examination in Geometry, which we produce for the benefit of Senior class.

1. If the angle of a fishing pole equals half the angle of the hook, find the angle worm.
2. Find the angle of incidence of a Senior girl's nose when she is vexed.
3. If the square described on the hypotenuse of a right angled triangle equals the sum of the squares described on the other two sides, what amount of space will be required to hold a Senior when she has her commencement clothes on.
4. Pass two Jack planes through a nail keg slatendicular to the circumference.
5. Find the "ark" that contained Noah and his family.
6. Find the hypotenuse of a right angled triangle formed by the two extremes of the Senior class, M. and R., standing eight feet apart.

Old People Made Young.

J. C. Sherman, the veteran editor of the Vermontville (Mich.) Echo, has discovered the remarkable secret of keeping old people young. For years he has avoided nervousness, sleeplessness, indigestion, heart trouble, constipation and rheumatism, by using Electric Bitters, and he writes: "It can't be praised too highly. It gently stimulates the kidneys, tones the stomach, aids digestion, and gives a splendid appetite. It has worked wonders for my wife and me. It's a marvelous remedy for old people's complaints." Only 50c. at H. Alex. Stoke's drug store.
