

DUHEY & OVERLOCK FORCED TO WALL

Big Brokerage Firm of Bisbee Makes Voluntary Assignment for Creditors.

RECENT HEAVY SLUMP CAUSE OF FAILURE

Customers Refuse to Take the Stock They Had Ordered—Liabilities \$80,000 and Assets About \$50,000.

BISBEE, Ariz., September 5.—The announcement was made in Bisbee at 9 o'clock yesterday morning that the big brokerage firm of Duhey & Overlock, a corporation, had failed.

Wild rumors spread quickly around town. It was reported that the corporation had liabilities in excess of assets of more than a million dollars, but upon the return of Secretary Duhey to the city last night he gave out an approximate statement fixing the assets at \$50,000 and the liabilities at \$80,000.

Harry Duhey returned to the city last night. He was met at the depot and asked for a statement for publication.

At first he refused to talk for the news papers, but later in the evening sent for a reporter and dictated the following statement: "The assignment of the business of Duhey & Overlock was made imperative on account of the failure of certain clients to take stocks they had ordered at a high price."

At the meeting of the Copper Queen hotel a meeting of twenty-six creditors of the corporation was held. When it was learned that Secretary Duhey had named Attorney Morrison and Richard Wood as voluntary assignees, there was some dissatisfaction expressed and it was finally decided by those present to send an attorney to Tombstone to ask Judge Doan to appoint Lou Wallace, head bookkeeper for the C. & A. Mining company, as receiver for the company.

Attorney Strickler left here overland in a buggy last night and appeared before Judge Doan this morning. Creditors representing \$55,000 were present at the meeting, which lasted for two hours. E. G. Strickler and E. E. Ellinwood were retained as counsel for the creditors. Attorney Morrison stated last evening that work had already been commenced on a statement of the corporation's business and his estimate in advance was that the liabilities would not exceed \$80,000 and the assets probably \$50,000.

Among some of the losers by the failure are the following: J. F. Schmid \$13,000; P. Sasse 5,000; A. G. Evans 3,000; C. L. Gonzales 2,700; Leopold Busse 4,000; R. M. Pattison 1,800; N. E. Bailey 1,500; C. E. Wainwright 1,500; J. G. Cowan 800.

ganized in Bisbee something over a year ago. It had a capitalization of \$50,000; shares, \$100 each. The principal stockholder in the company is L. J. Overlock of Bisbee, who has been in Europe for three months and is now on his way home and is expected to arrive in New York city some time this week.

The active management of the company has been in the hands of Harry Duhey, secretary of the company, formerly of Globe and for a long time chief clerk of the Copper Queen company at Bisbee and later of Douglas. Other prominent stockholders are L. C. Shattuck, president of the Miners and Merchants bank, and Joseph Muheim.

The News in Globe News of the failure of Duhey & Overlock was received early last evening in Globe through a telephone message from Phoenix, giving only the meager fact of the failure. The news caused much excitement among local speculators, as the firm was very well known here and formerly did considerable business in Globe. Since the telegraphers' strike, however, very little trading has been done by local people and so far as known no one in Globe will suffer through the failure.

Harry Duhey is a native of Gila county and spent most of his life in Globe, leaving here several years ago for Bisbee to accept a position with the Copper Queen company. For many years he was an employee of the Old Dominion company and has a host of friends in Globe who will sympathize with him in his hard luck. Although he was in the brokerage business only a little over a year, he succeeded in building up by far the largest brokerage business in the Warren district within a short time after he started business. The firm had a branch office at Douglas and did a large business in other territorial cities. Harry's many Globe friends feel that he will do the right thing by the firm's creditors and satisfy their claims as far as possible.

HORSE BUYERS IN SERIOUS TROUBLE

Hays and Zimm Held to Graham County Grand Jury for Embezzlement

Special to the Silver Belt. SOLOMONVILLE, Ariz., September 5.—Hays and Zimm, the Texas horse buyers, who were arrested at Safford about a week ago charged with embezzlement, have been held to the grand jury in the sum of \$500 each. They made bond and have been released. The complaining witness is Jim Parks of Clifton, a former sheriff of Graham county. It seems that Parks on some cock and bull story related to him by wire, advanced Hays \$800 and this money was used in forming a partnership with Zimm. It is held that there was a collusion between Hays and Zimm to beat Parks out of the money. There was sufficient evidence of this character introduced to warrant Justice Fonda of Safford in holding gthe accused to the grand jury.

FRENCH VICTORS OVER THE MOORS

Again Resist Charge of Fanatics and Repulse Them With Heavy Losses

CASA BLANCA, September 4.—About 6,000 Moors participated in Monday's fight. The Moors were repulsed on all sides and made a most impressive picture as, garbed fantastically, mounted on wild horses and carrying banners in front of the line, they swept down from the hills in splendid formation and charged thunderously to within 400 yards of the French, who for the minute seemed in danger of being overruled. As they advanced the Moors chanted verses from the Koran. The regular Algerians encountered the shock of the Moors' assault without yielding one foot from the position they occupied. General Druce quickly deployed his forces to the greatest advantage. The Moors submitted to the fire of shot and shell, which soon left the ground strewn with corpses.

Major Prevost was slain while returning to the camp after the engagements of August 28 and September 1, which occurred in the morning and lasted several hours. It is estimated that in the engagements of August 28 and September 1 about 8,000 Moors were killed or wounded.

CLARENCE NEFF MAKING GAME FIGHT FOR LIFE

At a late hour last night the doctors at the Old Dominion hospital held out strong hopes for the recovery of little Clarence Neff, whose legs were badly mangled in an accident at the O. D. scale house on Monday. The boy was unconscious and the greater portion of Wednesday and Wednesday night and it was thought that death was only a question of a few hours. Yesterday afternoon the little fellow rallied and has since shown marked signs of improvement. If he continues to gain strength the doctors have decided to amputate his left leg this afternoon.

MEXICAN EDITOR WILL MAKE FIGHT

Lelevier Taken to Phoenix to Have Hearing for Deportation to Mexico.

IN PIMA COUNTY JAIL FOR LAST FORTY DAYS

Has Been Running Revolutionary Paper in Douglas and Fears for His Life if Sent Back to Mexico.

Claiming that he is the victim of the political enmity of Mexican officials, G. G. Lelevier waits in the Maricopa county jail for his hearing before Court Commissioner McCormick on a charge of larceny of two checks at Naco, Sonora, the object of this hearing being to extradite him to Mexico.

Lelevier was taken to Phoenix from Tucson Tuesday by Deputy United States Marshal Myers, Mexican Consul Arturo M. Elias coming with them to look after the legal interests of his government.

But for defects in the complaint, which makes it necessary for United States Attorney Alexander to frame another, Lelevier would have had his hearing at once.

In the documentary evidence furnished by the Mexican government and on which the prisoner's extradition is asked, it is shown that while Lelevier was a custom broker at Naco, he came into possession of two checks, one of which had been sent from Cananea to Montgomery Ward & Co. of Chicago in payment for merchandise.

Not receiving the goods or any reply from the Chicago firm, the Cananean man wrote them, receiving a reply that they had not received the check from Lelevier in payment for goods he requested them to send.

Lelevier's son was employed in the Naco, Sonora, postoffice, and it is alleged that while there he stole the checks from the registered letters, and turned them over to his father, who himself used them in the purchase of goods from the Chicago house.

Lelevier has been in jail at Tucson for forty days, having been arrested with his son at Douglas, where he was editing an alleged revolutionary newspaper.

Since his arrest Lelevier has claimed that he is the victim of political enmity at Naco, whom he claims to have exposed, which resulted in their being fined by the Mexican government.

It has also been admitted by Lelevier that he cashed the check, but he claims that it was brought him by his son, and that he did not know it was not rightfully his property.

Lelevier will make a fight to escape being returned into Mexico, where he says he will suffer because of his support of reforms in the Mexican government. Lelevier some time ago cast his lot with the revolutionists and is strongly antagonistic to President Diaz and his followers.

IS GREAT SPORT

Rule Says Best Badger Fight Was at Globe

C. E. Rule, representative of Bail, Heinsman & Co. of Tucson, was in town Wednesday calling on his customers, says the Paradise Record. Mr. Rule is an enthusiast on the subject of badgers, and his favorite sport is a badger-bulldog contest. He states that Phoenix and Tucson are good badger towns, but that public sentiment in Douglas is so strong against that form of sport that it has been some time since a fight of the kind has been seen there. The best badger fight he ever saw was pulled off at Globe some time ago. He will never forget it. As to the cruelty of the sport, he says there is considerable exaggeration. His fine badger, which he left in a Benson hotel, though in several fights, has always emerged from the fight unharmed, and as for the bulldog—if he escapes the first onslaught of the badger unhurt, he need fear no further as to t result of the contest, as the badger is usually quite docile after making the first charge in surprise at being suddenly pulled from his hiding place and confronted by a savage bulldog. On the other hand, the bulldog has a very tough hide, on which the teeth of the bulldog do not seem to make much impression. Mr. Rule says it is very true that those who most condemn badger fighting are the very ones who know the least about it.

Tom Doyle Home

Tom Doyle, the well known mining man, returned yesterday morning from New York state, where he spent three months in his old home, which he had not visited her for thirty years. He was accompanied to Globe by his sister, Miss H. A. Doyle, who will spend the remainder of the summer in Globe. Tom reports having a fine time.

New Real Estate Office

A. B. Ellsworth, a prominent real estate man of Los Angeles, is in the city and is among the guests at the Kinney. Mr. Ellsworth believes that Globe has a wonderful future and has decided to locate here and open offices. He states that the city's greatest need is good four and five-room houses. He will undertake to interest Los Angeles capital in supplying this demand.

YOUNG WOMAN CHARGED WITH THEFT OF SPARKLER

There was an interesting trial in Justice Rawlings' court yesterday in which Mrs. Lola Johns was the defendant and S. J. Hanawalt the complaining witness. Hanawalt charged that Mrs. Johns, who has been employed as a waitress at the Cozy restaurant, purloined a diamond ring belonging to him, whereas the defendant claimed that the ring had been loaned to her by the complaining witness' brother Clinton. Mrs. Johns was arrested Wednesday evening and released on a cash bond, after the ring had been returned. At the hearing yesterday she was represented by Attorney George K. French and when the case was continued until Monday Mrs. Johns was paroled in custody of her attorney. She came here with her husband several weeks ago from Denver, the latter accepting a position as meat cutter at a local market. The ring is said to be valued at \$400. Mrs. Johns is a very handsome woman and her case is attracting much attention.

Death of Mrs. White

Mrs. Edith Hawthorne White, aged 25, wife of Harry White, a mining man of Douglas, died in this city at the residence of her grandmother, Mrs. Wilson, on South Broad street yesterday afternoon at 4 o'clock. The remains will be shipped to Douglas this morning for burial. Mr. Wilson brought his wife to this city for medical treatment and the care of relatives last July. The lady was not considered in a serious condition and her death will be something of a surprise to her many friends in Globe.

Mail Contract Awarded

W. P. Kelsey of the Globe Livery company has entered into a contract with the postoffice department to carry the mails to Crowley, the new Pinto Creek postoffice. The service, which will be daily except Sunday, will begin next Monday.

MEXICAN IS FOUND DEAD IN THATCHER

Coroner Decides that He Was a Victim of Too Much Red Liquor

Special to the Silver Belt. THATCHER, Ariz., September 5.—The body of an unknown Mexican was found about a half mile from the gravel pits south of this city this afternoon. There were no evidences of violence and it is believed that the deceased came to his death as the result of alcoholism. Letters found in the coat pocket of the man were addressed to "Amon Macorri, Tucson." Several Mexicans working at the gravel pits state that the dead man was seen about town on Sunday drunk, and it is thought that he came here on the freight train which reached Thatcher Saturday afternoon. A coroner's jury found that the deceased came to his death from the excessive use of liquor and the body was ordered buried by the coroner.

TRAIN ARRIVED HERE ALMOST ON SCHEDULE

For the first time in almost two weeks the regular evening passenger train from Bowie arrived in Globe on the same day it left Bowie. Last night's train was only an hour and a quarter late and its arrival so early in the evening quite a sensation. Wednesday evening's train did not reach here until 4 o'clock yesterday morning. Superintendent Mallard, who arrived in the city from the scene of the last washout early last evening in his railway auto, thinks that the worst is over and that there will be no further washouts unless there is more rain. Mr. Mallard states that according to the "oldest inhabitants" the recent rains in the Gila Valley were the heaviest for over twenty-five years.

ANOTHER SCANDAL STIRS PITTSBURG

Four Prominent Politicians Indicted for Complicity in Tax Receipt Frauds

PITTSBURG, Pa., September 4.—A political sensation was caused here today when it became known that the grand jury had indicted four prominent politicians, alleged to have had participation in connection with the alleged tax receipt fraud. The men indicted are: Elliott Rodgers, state senator and former judge of the common pleas court; Samuel Grenet, director of the department of public safety in Allegheny; William Hogel, a member of the Allegheny council, and William Lamb, a leading Allegheny politician. These men are charged with securing false registration, fraudulent voting and conspiracy to issue fraudulent tax receipts. The charges, it is said, are based on the November election in 1906, and are the outgrowth of a crusade waged in the Voters Service league in Allegheny. Each of the accused men has been bailed in \$5,000. It is estimated that about 700 or 800 affidavits have been secured from parties who used the alleged bogus tax receipts which they claimed were given to them by Allegheny politicians.

MINING WRITER TELLS OF GLOBE

Hayden, Stone Correspondent Writes of Recent Visit to the Globe District.

IS HIGHLY IMPRESSED WITH OLD DOMINION

Physical Condition of Mines Is Better than Ever Before in History—Globe Consolidated and Superior & Boston.

During his recent visit in the Globe district Simon J. Beahan, the well known mining writer and western correspondent for the firm of Hayden, Stone & Co., was very favorably impressed with the district and says the following in his correspondence to the brokerage firm:

With a monthly output of 2,500,000 pounds of copper the Old Dominion is now profiting from its vast expenditures of the past two years for construction and development, and while this rate of production will reflect a normal scale of operations for a year or so, still it is evident that the maximum is yet far from being reached, as witness the fact that the matter of doubling the present concentrating capacity of 500 tons is already under advisement.

Of the above monthly recovery, about 500,000 pounds is received from the United Globe, whence daily shipments aggregate about 175 tons. The Old Dominion mine is supplying about 1,000 tons daily, of which 300 is forwarded direct to the smelter. The company has five furnaces, all in commission, with material on the ground for a sixth, which, however, is to be kept in reserve.

The entire output of Old Dominion is hoisted through a shaft, opened to the 14th level, a depth of 1,100 feet. Production is confined largely to the territory below the sixth level, though ore is still being extracted from the levels above to the third, inclusive. Above the eighth level the product is exclusively oxidized ore, all of which goes to the smelter.

The sulphide ore body, probably the most valuable asset of the company, comes in between the ninth and tenth levels, from which point its tendency has been of broadening proportions, both laterally and in width, to the 14th level, the present bottom depth of the shaft, where this copper shute has been disclosed for a length of 800 feet, with the drifts east and west still in ore. The vein varies in width from eight to eighty feet, a stop on the 14th level being operated to the latter width and containing average copper values of at least 10 per cent. The undeveloped length of this vein west of the breast of the drift on the 14th level is about 4,000 feet, with a considerable longer stretch to the east.

The winze being sunk in the footwall from the 14th to the 16th level, is bottomed within seventy feet of the latter, from whence a length of crosscut of 100 feet will be required to intercept the vein. This work is of the highest importance, as the results will have a direct bearing on the future position of the company, for which reason its completion, about the middle of October, will be looked forward to with a broad degree of interest.

Shaft B, opened to the 10th level, depth 800 feet, is used for the handling of timber and serves to ventilate the main workings, with which it is connected at its two lower levels. This shaft commands the territory east, where development work is in progress. C was sunk primarily as an air and drain shaft, the plan being to handle the entire volume of mine water through this source. A new pump capable of handling 4,500 gallons per minute is about to be installed at this point, and when in commission conditions will permit of what promises to prove some extremely important developments in this direction.

South of C shaft there has been disclosed an extensive body of oxidized ore, assaying from 6 to 7 per cent copper and containing such an excess of iron as to render it extremely desirable. The development of this body, as above indicated, has been retarded by the heavy inflow of water, but it has been opened upon at the eighth and ninth levels, while at the tenth level the ore already blocked out is estimated at not less than 100,000 tons. It may be added that this shaft is connected with the eighth level of the active workings.

It is but three years since the Old Dominion was compelled to purchase its entire sulphide flux, while today it is supplying 75 per cent of the entire requirements in this direction essential to the treatment of the entire tonnage forwarded to its smelter, including commercial shipments.

The Old Dominion occupies a stronger position physically than at any time since entering the ranks of the producers. The reserves are of broader extent and of better character, and no doubt exists but that when the capacity of the concentrator is doubled sufficient ore will be available to tax the increased facilities.

Globe Consolidated

It is reported that sinking in the Malory shaft has been discontinued at a depth of 790 feet and that lateral development from this point will be started. It will be recalled that at a depth of 500 feet crosscuts were driven from this shaft, and while no ore bodies of moment were encountered there were

good indications that the copper values had been leached and would be found at greater depth. Consequently the results on the 790-foot level will be watched with a good deal of interest.

Globe Consolidated has held remarkably steady during the slump and its small capitalization of 100,000 shares and the ability of the crowd behind it, give the stock speculative possibilities that are possessed by few of the new development propositions.

Superior & Boston

The character of the Superior & Boston developments to date are such as to inspire a broad degree of confidence in its future, for which reason the spirit of aggressiveness in evidence in attaining workable depths and shaping affairs for production is to be commended.

The most important development thus far is on the Buckeye vein of the Black Oxide claim, which is reached by a tunnel, extended to a length of about 650 feet. Where drifted upon for a length of eighty feet, this vein shows an average width of from five to six feet of carbonate ore, the average copper contents of which is about 6 per cent, in addition to a heavy excess of iron, in which fact is to be found an advantage from the standpoint of smelting. A winze has been sunk from the tunnel to a depth of ninety feet, showing values somewhat better than those in the drift.

The maximum height of the back of ground commanded by the tunnel is 488 feet, while the length of vein yet to be developed by the tunnel is 350 feet. Shaft work will, of course, be necessary in the development of this vein in the territory east of the tunnel.

Shipments from the Buckeye stockpile to the Old Dominion smelter are about to be commenced, while within a month or so stopes are to be started with a view to regular production on a small scale.

It may be of interest to note that the Buckeye vein is numbered among the most important sources of production of the United Globe property of the Old Dominion, it having contributed gross values to the latter of upwards of \$800,000.

The new shaft on the Limestone vein has just cut the formation at the 235-foot level, where there was disclosed a width of five feet of 5 per cent carbonate ore. Compared with the level above, the formation is wider and presents both a stronger and healthier appearance. This vein has never heretofore been explored.

The Great Eastern shaft, being sunk to develop the Black Hawk vein, is bottomed at a depth of a trifle over 300 feet, or within 100 feet of the depth of the fifth level of the Arizona Commercial shaft on this formation, distant but a few hundred feet. These shafts are to be connected for ventilation purposes as early as possible.

The fifth level of the Arizona Commercial shaft contains a very good grade of ore in the east stopes, with the geological conditions such as to indicate much better values at a slightly increased depth. In this connection the fact that the Arizona Commercial is about to start a new vertical three-compartment shaft on this vein is not without special significance.

STRIKERS GOING TO OTHER LINES

Seek Temporary Employment in Other Trades—No Trouble to Find Jobs

NEW YORK, September 4.—The World today says:

From now on the striking telegraph operators will seek temporary employment in other trades. Four hundred telegraph girls in this city will start today to get employment in dry goods stores. Summer vacations are over and they say they easily can find other employment. They will seek employment also as telephone operators. Twenty girls obtained other employment yesterday. October 1 next, when the eight-hour law goes into effect compelling railroads to make shifts of eight hours each in twenty-two states, six hundred men from New York and Chicago will become telegraphers on the railroads.

Superintendent Brooks of the Western Union said yesterday: "The making of directors September 10 will take no action on the strike, but simply will transact routine business. The fifty-five men from different locals who are coming here to discuss arbitration might as well save expenses and remain where they are. Their coming here will do them no good."

FOUR MONTHS SENTENCE FOR MAN ARRESTED HERE

Z. Skalmier, arrested in this city a number of weeks ago and taken to Douglas charged with passing a number of forged checks in that city, has been convicted and sentenced to serve a term of four months in the county jail and to pay a fine of \$50. An appeal will be taken. Skalmier's defense was that the checks were dated four months in advance of the time they were cashed and for that reason they were not due when presented to the bank. The court did not consider this contention.

Ball Player Leaves

Walter Bridwell left here yesterday morning for San Carlos and Wilcox, where he will visit relatives, after spending the summer in Globe. He will join the Globe baseball team at the latter place when they are on their way to Cananea for the Mexican Independence day series, after which he will go to Los Angeles to re-enter the University of Southern California.

LACK QUORUM AT COUNCIL MEETING

Important Matters Which Were to Come Up Are Sidetracked for the Time Being.

ONLY THREE ALDERMEN SHOW UP AT MEETING

Street Lighting Was to Have Been Settled—City Physician Wants to Have Slaughter Houses Moved Far Away

Aldermen Van Wagenen, Martin and Woods attended the council meeting last evening, but as four members are required to make a quorum, no business could be transacted. There was quite a program for last night's session, but Mayor Sultan found it necessary to leave the city on business and there were not members of the council enough in the city to form a quorum. The most important business which was to have been taken up was the street lighting matter, but a solution of the problem seems as far off as it was weeks ago.

Another matter which was to have been brought up was the complaint from the red light district, which registered a kick at the last meeting, alleging that they were being held up for extortionate rents. The council had requested J. T. Hendrickson, a large property owner in the district, to attend the meeting and throw some light on the matter, and he was in attendance. Mr. Hendrickson claims that the rents are the same as for the past few years and that no attempt has been made to hold up the tenderloiners.

Dr. B. G. Fox, the city physician, was present last night to register a strenuous complaint against the slaughter houses now operating within a short distance from the city. There are now three of them in a row just south of the city limits, and according to the city physician the stench that emanates from the abattoirs is something fierce. He holds that they are a source of continual menace to the health of the city owing to their proximity to the city water supply and that they should be compelled to move to the legal distance of two miles from the limits of the city. It is hoped to get a quorum at the next weekly meeting of the council and there probably will be one, as monthly salaries are due then.

HIGH-CLASS APARTMENT BUILDING TO BE ERECTED

George Gamble, for a number of years proprietor of the Coronado stage line, running east from Solomonville to Clifton and Morenci, and who recently located in Globe, has decided to erect a handsome terrace on the east side to cost something like \$10,000 and which will afford homes for at least twenty families. Mr. Gamble has secured an option on a lot 125x100 feet, about three blocks east of Broad street, and will soon have plans made for a two-story terrace building. Each apartment will contain three rooms. He proposes to furnish the house in modern style, using space-saving wall furniture. The building will be of brick or concrete blocks and will probably be ready for occupancy about November 1.

MUCH COPPER IS SOLD AT EIGHTEEN

Millions of Pounds Sent to London and American Sales Expected Soon

BOSTON.—There have been a number of millions of pounds of copper sold within the last few days in London at 18 cents per pound and a fraction above.

Consumers in Europe are buying heavily and the purchases are not speculative, but for consumption, for European stocks have been exceedingly small for a number of months.

Europe generally comes into the market when copper strikes bottom. It is the American people who buy on the top, while the European consumers keep out of the market. The foreign consumers are now filling up, while the American consumers have been looking on.

The Western Electric company, which some months ago laid off a large force of men and canceled orders for copper, is now putting on men again; within a week they have put on 300 extra men. This company has also re-entered the copper market and has been quietly picking up the metal for two weeks.

We understand that the Amalgamated interests have been selling copper abroad quite freely on a basis of 18 1/2 cents; in fact, our London cables have reported this fact. Official announcements by the United Metals Selling company, Phelps, Dodge & Co. and other copper selling interests of a new scale of prices between 18 and 18 1/2 cents will probably be made within a day or two.

Large sales of copper for domestic consumption will probably be made within a few days.—News Bureau.
