Strawberry Short Cake

It was Dr. Butler who, in speaking of the strawberry, said: "Doubtless the Lord could have made a better berry, but doubtless he never did." Give the family a treat. Give them strawberry shortcake with cream—and make it with the best flour you can buy.

Our flour never varies and never disappoints. It is good—not sometimes, but every time—for every sack is made from the best grade of wheat and made in just the same way. We believe that our long experience has taught us how to make good flour, and you will agree with us when you try it. Don't order just "a sack of flour"—Order by name from your grocer—

National Defense and International Peace

Preparedness and Peace and the Engineer

THE United States desires peace, based on justice and maintained with honor. But to insure this kind of peace Americans must know that nations are now defended not alone by fighting men, but by fighting industries.

The Engineers of this country, trained as only American Engineers are trained, hold that truth to be as fundamental as the law of gravity. With the authority of the United States Government more than 30,000 Engineers and Chemists, members of five eminent American scientific bodies, are making for the first time in the history of the Government a minute, sweeping survey of the industrial resources of America. They will go to the factories and mines of the land and with their sole method, efficiency, and their sole motive, patriotism, form a vast, flexible organization, such as the world has never known.

Their work will be the basis for creating in this country a true line of defense in time of war—the ability to produce swiftly, abundantly and with sustained power all the thousand and one elements of modern warfare. Without such production there can be no efficient army and navy.

Military Preparedness wins the battle. But Industrial Preparedness wins the WAR! Industrial Preparedness involves no huge expenses. Only the KNOWLEDGE of what American Industry can do. To KNOW the extent of each plant, the equipment of each shop, the capacity of each machine, the ability of each man. THAT is the essence of industrial preparedness. That is the task to which thirty thousand Engineers are pledged.

The Engineers' work will lay for all time the ghost of the "munitions trust" by making it possible to have munitions made in thousands of plants.

This vital work of the Engineers will supply the military authorities in Washington with information never before collected, and it is carried forward without a dollar's cost to the Government. And this advertisement is not paid for. The Associated Advertising Clubs of the World have prepared the copy and the publishers have patriotically responded and printed it without pay for the sake of National Defense and International Peace.

All Americans are asked to strike hands with the Engineers so that America shall learn how to raise up an impregnable wall of defense against a day of trial.
