

A Mistaken Idea

Some people have an idea that in order to have a bank account, they must have a large sum to deposit; that the bank does not care to be bothered by small accounts.

This, however, is not true of the Chehalis County Bank. This bank welcomes new accounts, whether of \$1.00 or \$1,000.00 and the same courtesy and service is accorded the small depositor, as those in more fortunate circumstances.

It is our object and wish to serve the public in financial matters in a manner that shall be satisfactory to all—old or young, rich or poor.

WE WANT YOUR BANKING BUSINESS and will be pleased to have you open an account with us.

TEN-YEAR-OLD ROADS BEST.

Builders Are Getting Careless, Kansas City Judge Says.

"Why are the roads built ten years ago better today than the roads built three or four years ago?"

That question was asked by Judge H. C. Gilbert of Judge E. L. Martin and Judge E. E. Axline of Kansas City. The questioned judges shook their heads.

"Simply because the plans and specifications made and carried out ten years ago were for real rock roads work and for the further reason that the contractors who did the work ten years ago were required to build the roads exactly according to plans and specifications," answered Judge Gilbert.

"There is going to be a change in this road building business," Mr. Gilbert said, and the other members offered the additional bit of information that there is going to be a decided change.

"Contractors in recent years haven't been building the roads in strict compliance with the plans and specifications," Mr. Gilbert added further. "Some of the contracts called for roads twenty feet wide and others sixteen feet wide. They are a little narrower than those widths in many places—too many places. The same contracts called for the macadam to be fifteen inches in the center—little enough, and nine inches deep at the sides. These macadam roads are not built in many places."

The dairy business of the country will be put on a much more profitable as well as a fairer basis when the price paid for cream is determined not only by butter fat content, but free from color, etc., which can, inevitably, a poor butter quality. This so long as a dairy patron pays so much per bush for his cream on the basis of the Babcock test, no matter how long and filthy it is, a dishonest injustice will continue to be done the clean and careful patron, while there will continue to be lacking in the case of the filthy patron a compelling motive to be any cleaner or do any better.
