

AVERS WIFE SLANDERED BY WOMAN!

Husband Throws New Light on Seattle Kidnaping Case

"My wife and I took our boy, Sigmund Clein, jr., 3, from Mrs. John A. Wangness' brother, at the entrance to the Lyon building. The Wangnesses had cared for the boy a year, having taken him when the mother was in destitute circumstances.

"We brought the kidnaping charge because we thought it was the only way to recover our child," Clein said.

Clein declared that the alleged derogatory remarks about his wife were made while she was being considered for membership in a lodge of which Mrs. Wangness is an officer. He said his wife had not petitioned for membership and has never been rejected.

Mrs. Wangness, who claims she wanted to keep the boy in order to provide him a good home, has been released on the kidnaping charge on her personal recognizance. The date for a hearing has not been fixed.

"I just got married at the courthouse," McDonald explained to Sgt. F. C. Fuqua, of the police traffic division. "And was driving up Fourth with my bride. I couldn't see that traffic cop. I couldn't even see the Cobb building."

"They let him off!"

Drove While Drunk on Love, Say Police

Driving while intoxicated, or Drunk on Love, might have been the charge lodged against Arnold McDonald, of 1912 E. 70th st.

McDonald almost ran over Traffic Policeman M. C. Short at Fourth and Union st.

"I just got married at the courthouse," McDonald explained to Sgt. F. C. Fuqua, of the police traffic division. "And was driving up Fourth with my bride. I couldn't see that traffic cop. I couldn't even see the Cobb building."

"They let him off!"

BIBBER, Ariz.—Postmaster L. R. Bailey, arrested on charges of misappropriating postal funds. Bail, \$50,000.

MOUNT VERNON, — Clarence Wiles, of Row, sentenced to ten days in jail for reckless auto driving.

One of the Reasons Why Seattle Children Are Healthy

14,000 bottles of Maplewood milk leave the Pure Milk Dairy on Westlake Avenue North every day to carry health and vigor to thousands of Seattle citizens. Thirty delivery trucks are busy bringing the fresh product from near-by farms, and delivering it after its preparation in the Dairy to private homes, hotels and restaurants.

The Pure Milk Dairy is a part of Seattle's business history, for it has been supplying milk and cream in this city for nearly twenty years. In 1900 Mrs. Andrews started delivering the certified milk from the famous Maplewood Farm, which is still the home farm of the Pure Milk Dairy. Since that time the Dairy has been incorporated and grown into one of the largest and most sanitary milk plants of the Northwest.

If you watch the cans of milk as they arrive at the receiving room of the Pure Milk Dairy, this is what you will see every morning:

The cans are transferred from the trucks to an electric elevator which takes them to a platform on the second floor, where they are weighed and combed with the contents of other cans. This is called standardizing, and is one of the most important steps in getting a uniform milk product. One reason why Maplewood Milk can always be depended upon is that it never varies in its amount of butter fat. It offers an honest quality of milk at all times.

From the standardizing room, the milk passes into containing tanks to await pasteurization. The Simplex Pasteurizing Machine, one of the newest and most complete on the market, is installed in the plant of the Pure Milk Dairy. Great aluminum pipes, one within another, keep the milk in circulation while it is being heated. The steam between the inner and outer pipes keeps the milk at a temperature of 142 degrees Fahrenheit; a perfect pasteurization is secured by allowing the milk to remain under this degree of heat for thirty minutes.

A Simplex Cooler, on the same principle as the Heater, then removes the milk. The cooler consists of three pipes, two of which contain water and the third brine. Circulating around these pipes, the milk is cooled to a temperature of 50-53 degrees Fahrenheit.

Now the milk is forced into a holder, capped with sanitary caps, and flows at once to the bottling department on the first floor.

Part of the milk is retained for separating purposes. The cream goes through the same process of pasteurization, heating and cooling as has been described. Two more Maplewood products are secured from the skimmed milk which flows into a separate vat after separation—cultured buttermilk and cottage cheese. The skimmed milk also is pasteurized before being made up into cheese and buttermilk.

Many passers-by on Westlake Avenue stop to watch the big automatic bottling machine at work in the windows. The bottles are filled with milk, capped with sanitary caps, sprinkled with a cleansing shower, and conveyed away—all by the action of a single machine with but one man operating it.

Other interesting features of the plant are an ice crusher which cuts the cakes of ice and deposits it in the wagons below, thus eliminating much labor in handling; the testing room, where the important tests for butter fat are made by expert technicians; the bottle-washing rooms, where elaborate machines are in-

Stetson & Post Lumber Co. Wields Important Influence in Pacific Northwest

Pioneer Concern, Established in 1874, Identified With Early History of Seattle—Now a Big Factor in Lumber and Mill Work and Adopting New Plan for Home-builders.

Almost a half century ago, when Seattle was a straggling frontier village, Mr. George W. Stetson and his partner, Mr. Post, established a little factory and grist mill in a building at the foot of Yeeler Way, rented from Henry L. Yeeler. This was the humble beginning of one of the most important lumber manufacturing companies of today in the Pacific Northwest.

In the fire of 1889, their plant was destroyed and was rebuilt at the foot of Yeeler street. This plant also burned a few years after it was built and was rebuilt. In 1907 the Yeeler street site was sold to the O. & W. railroad for a dock site for ocean-going vessels.

The present site of this company is at 2300 Westlake avenue, at the corner of Hanford street, just opposite the Hanford street dock of the Seattle Port Commission.

In 1916 the Stetson & Post Company purchased large tracts of timber on the Cedar River and established a logging camp to supply the company with the logs used in the manufacture of their products.

In 1919 the company's president and founder, George W. Stetson, died. His present officers and owners are E. H. Brett, president; Boss Belle Stetson, treasurer, and B. F. Kehrer, vice president and secretary.

The Stetson & Post Lumber Company has a record of never having had to shut down on account of market conditions. Last winter, the worst that the local lumber industry has had to weather, the Stetson & Post Company operated full time every day. The officers attribute their successful record to the quality of their product and the service given their customers, during nearly half a century of operation. By the Stetson & Post Lumber Company's standard of quality, the quality of all mill containers, and locker rooms for the employes, with well-equipped shower baths. Every feature about this modern dairy is a credit to the city, and its efficient manager, A. P. Ehrig.

Mothers of Seattle have long been familiar with the value of the Maplewood Certified Milk, a special product for babies and growing children. No higher tribute could be paid to the quality of this Certified Milk product than the hundreds of healthy and happy youngsters of Seattle who have been raised on it.
