The arrow points to the Patented Draft Control. Just as the engineer controls his locomotive so can you easily control the heat from this remarkable stove.

Owing to its air-tight stay-tight construction all air entering the stove must pass through the draft control. No control is possible with imitation stoves—Since their leaky side door and cast bottom construction can only be made temporarily tight with stove putty which soon dries and cracks, admitting air through numerous cracks, thus making regulation of the stove impossible.

We offer you quality goods at lowest prices. Prompt and courteous attention is our Motto. Inspect our stock before buying.
