

# THE NEW DE LAVAL

THE worth of a separator depends very largely upon its bowl. A separator bowl must be scientifically designed, properly constructed and perfectly balanced or it will not only lose some cream to begin with, but will soon get out of balance and lose a great deal more cream, besides wearing out the bearings and gears in a short time. That is why the average life of a cheap separator is only two or three years.

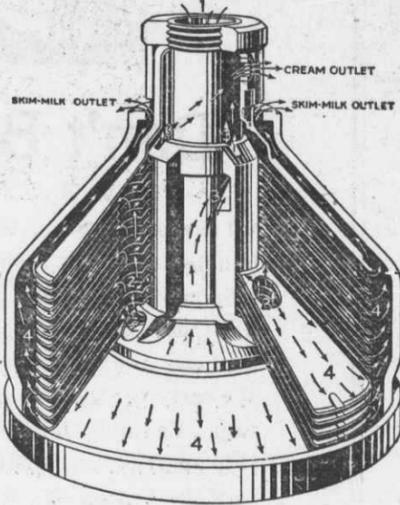

## The bowl of the NEW DE LAVAL is self-centering

The new De Laval bowl is so constructed and so balanced upon its detached spindle that it will run true and do perfect work even after the machine has been in use for a long time.

The De Laval bowl has always been noted for its close skimming under all conditions, but the NEW De Laval patented milk-distributing device, together with the larger discs, makes the new De Laval bowl an even closer skimmer than the old one and gives considerably greater capacity into the bargain.

The new De Laval bowl has been called by people who ought to know, "the greatest improvement in cream separator construction in the last thirty years."

Come in and see one of the new machines. We'll be glad to explain it to you in all its details, and we know you will be interested in examining the new bowl, the bell speed-indicator, and the many other improvements.

## The World's Strongest Fence and the Reasons Why

MORE than thirty years ago Mr. Page began fencing the earth.

It is a mighty task and not yet finished, but more than a million American farmers are using Page Fence. Vast stretches of land in Canada, Mexico, Central and South America are enclosed with Page Fence, and every civilized country on the globe is a buyer of this product. Wherever wire fence of maximum tensile strength and utmost durability is appreciated, you'll find Page Fence, the Pioneer, the original square mesh Woven Wire Fence. It has enormous tensile strength.

Page Fence is not stuck nor tied together, nor cut into short sections and wrapped together, but consists of continuous wires, both horizontal and perpendicular, actually woven, the one with the other, every foot receiving hand labor. The Page Knot is the only real knot applied to wire fence construction, and has no equal for smoothness and strength.

It Can't Come Off!
