The Possibilities of This Exceedingly Pop-

It is possible that in a few years the American people will be feeding on banana flour, as they now do on the flour of the wheat, rye and maize. It is claimed that the flour will keep as long as wheat flour, and is as nutritious as meat. Also that the banana is fortyfour times as productive as the potato, and that an area which would grow enough wheat to support one man would produce bananas enough to sup-

It was the opinion of Alexander von Humboldt, after estimating the capabilities of the banana, that a single section of Central America could pro-duce enough to feed the world. The meal or flour is made from the unripe banana, and the cheapness and plentifulness of the commodity, when once the industry is established. will most certainly be of interest to the poor, for this will in turn lower the price of the loaf. The manufacture of a banana sausage is said to be perfectly feasible. In this case the ripe banana is used and charged with condensed milk, and then put up in tins. Already some of the largest canning factories have begun to make this a feature of their business. The sausage is even more nutritious than the meal, and is so easily transportable, that on a campaign it will be almost invaluable.

It has also been learned, without a doubt, that the banana meal can be used most successfully and economically in manufacture of beer.

So much for the fruit of the banana. It has lately been discovered that the skin of the fruit is also valuable. First of all, it gives a beautiful fiber, from which a durable and fine cloth can be manufactured. The juice of the skin The back should be straight and the loin wide and thick. The ribs should be straight and the loin wide and thick. The ribs should be straight and the loin wide and thick. it rivals the cocoanut as being "the most useful tree to man."

If the "everlasting imported banana" can be converted into bread, sausages and beer, it will come into competition with the products of the great and powerful states of the north and west, which are able to stand the rivalry, while at the same time it will be with-drawn from competition with the other fruits of Florida by reason of the very small area to which it can be There is still plenty of suitable land,

An unduly long handle-bar is weak, it however, and the man who feels like investing and engaging in banana culspreads the rider out too much, and it unsteadies the steering. ture, "has money in the bank," for a great company has already been es-RIDERS should never discontinue eyeling for any length of time, because tablished, and is now in working or-der, to develop the banana industry in there is no better tonic; but if they are compelled to for some reason, they should immediately adopt some other form of exercise.

To LEAVE an insufficient length of

Every banana raised in Florida now finds a ready market, for it can all be used, meat, skin, juice and fiber, and the far-seeing man can sight profit hind quarters. Uniformity in the ewes ahead.—Cor. Florida Fruit Grower.

Do Old Men Plant Trees.

It has been said by some wise man-Emerson, I believe—that only old men plant trees. This may be the rule but my earliest recollections were con-nected with tree planting. My mother, father and maternal grand-mother were all ardent lovers of horticulture, and I inherited this love in an increased

While I was in attendance at Tulane university, in the city of New Orleans, I was struck by the high price charged for the extra grade of Louisiana softshell pecans. The medium grades sold on Canal street for from twenty to fifty cents a pound, while the finest sold for one dollar. These latter, of course, were used for seed and for ornament ing cakes for Christmas for rich people. It was a source of won-der to me why some one did not buy into bearing in nine years, and would bear a remunerative crop at fifteen, growing more valuable each year till they become a hundred years old. my window I see the finest pecan grove in the south, which has just come into bearing, and which is now one of the most valuable pieces of agricultur al property in the south. It contains about a hundred acres and over a thou sand trees. The Rural New Yorker gave a lengthy article about this grove last April, and has another now in press, so I shall say nothing more about it here. I have also large orchards of pium, peach, apple and pear trees, which add much to our living, and now that there is no longer any profit in cotton growing, they promise to be remunerative in them selves. - Fruit Grower.

Few farmers know the amount of actual fertility in their land. The writer must confess to having been radely awakened a few years ago to this lact, when Sir J. B. Lawes asserted that a very poor field on his farm, on which corn (wheat, oats or barley, they grew no maize in England) could not be induced to grow six inches high without very liberal fertilizing, doubtless contained not less than 2,000 pounds of nitrogen on each acre of it. But a little study and consideration confirmed this statement, and later experience proved it. The trouble was that the nitrogen was inert and unavailable, locked up in insoluble form, so that the roots of the plants could not make use of it.

Brings comfort and improvement and tends to personal enjoyment when rightly used. The many, who live bet-ter than others and enjoy life more, with It was the same with the other elements of plant food, mere elements of it, and not the food itself, and as much ter than others and enjoy lite more, with less expenditure, by more promptly adapting the world's best products to the needs of physical being, will attest the value to health of the pure liquid laxative principles embraced in the remedy. Syrup of Figs.

Its excellence is due to its presenting in the form most acceptable and pleasant to the taste, the refreshing and truly beneficial properties of a perfect laxunavailable as so much earth, which contains elements of the food of plants, is for the support of animals. Food must be digestible or it is as useless for the nutriment of an animal or a plant as mere air or solid rock will be. Thus the soil may contain a vast ant to the usue, the refreshing and truly beneficial properties of a perfect lax-ative; effectually cleansing the system, dispelling colds, headaches and fevers and permanently curing constipation. It has given satisfaction to millions and quantity of the elements-the raw material-of food for crops, and yet be as infertile as the great African desert of Sahara. Indeed, this barren desert is actually filled with fertility, and blossoms as the garden when it is watered, and in the same way there may be an profession, because it acts on the Kidneys, Liver and Bowels without weak-ening them and it is perfectly free from abundance or a great surplus of plant food in a soil, and yet it may be wholly unable to yield a crop. We have this unable to yield a crop. We have this same experience on this continent, Syrup of Figs is for sale by all drug-gists in 50c and \$1 bottles, but it is manwhere there are deserts as barren as ufactured by the California Fig Syrup Co. only, whose name is printed on every package, also the name, Syrup of Figs, and being well informed, you will not accept any substitute if offered. that of Africa, and vet when the overflowing plant foot in it is made available by irrigation the soil yields enormous crops.—Rural World.

Southern Hogs in the West The year 1895 may see a remarkable

reversal of existing trade conditions between the south and west. Accustomed as we have been to the shipment of western hog products and provisions into the south, on an extensive scale, it will seem to most people absurd to think of the south shipping hogs and corn to the west. This may be done before the and of the present year, according to Mr. W. H. Baldwin, vicepresident of the Southern Railway Co., who believes that the failure of the corn crop in the west, concurrent with the extraordinarily bountiful crop in the south, will result in the phenome-non of the south shipping hogs to the west. Already purchases of corn have been made in Alabama and elsewhere

for shipment to Illinois and other west-An expert estimate of the cost of corn production in Texas. Mississippi, Arkansas and North Carolina places the overage figures at thirty cents, and at the present good market prices the profit will be large. Besides this, some of the planters have entered into the raising of cattle on a scale never before even contemplated. The failure of the pasturage in the west through the hot weather and the consequent decrease in the herds of live stock in those sections is likely to impart a great stimulus to the stock-raising industry in the south for next year, and it would not be astonishing if southern beef, other than that from Texas, might be in the

Founding a Flock. To establish a flock from commor ewes, secure the help of a pure-bred ram of any of the mutton breeds that have qualities suitable for your conditions. In a ram for this purpose, mutton form is demanded. He should be heavy headed, thick necked, broad chested, but nowhere coarse. Over the shoulder should be full and broad. the body. Such a sheep is thriftier than one that is flat-sided. It is very desirable in a mutton ram to be deed and broad between the hind legs

western markets in 1895. - Farm News.

or twist, so as to furnish a plump leg of mutton. The legs should be short, the bone clean, and the hair upon them fine. A ram. to get good lambs, must have a strong constitution. The evidence of this, be sides the points of form before mentioned, are activity, a pink-tinted skin and a sound lustrous fleece covering the belly as thickly as the back. fleece should be dense and even, and made of fibers that have a good length, mutton breeding is strong in frame and of fine quality. A ewe that has a distinct feminine appearance is kindest to her lambs and makes the best breeder. She should be close to the ground, with straight back, well-arched ribs, and broad loin and strong square-shape of a flock is desirable, for it is a profitable quality of lambs and wethers, as those that are uniform please the butcher best. -- Rural World.

More Stock in the South

The new south is developing new life and vigor, and attracting immigration by the thousands. King Cotton is dethroned for mixed farming and stock growing. The diversified farming has the south, and with the great abundance of cheap, rich cotton-seed meal and the production of grain, forage and grass, the south is destined to beone of the greatest live-stockproducing countries in the world, with grass the year round, and no winters to provide against.

Cattle, sheep and hogs are becoming more universal upon the southern farms; the home demand is fast increasing in the growth of the southern a large amount of these extra-grade cities and towns, and the great manufacturing interest extends all over the by experience that they would come south.

The dairy interest, too, is fast developing with the better farming, fruit growing and gardening to supply the dered what their number was, 'I am northern markets, improved horse I bought me a quantity of the best breeding, too, is nedding to the new seed, and in spite of opposition (for I prosperity. Instead of buying cheap was a young man then) and ridicule,
I planted a large grove in northern

Ten years have uses on the plantation and in cities for headlines in alphabetical copy passed since then, and as I look from and manufacturing centers. books."—Pearson's Weekly.

With such diversified home markets,

The corn crop in the southern states

last year, while showing some increase 1893, was far from reaching a satisfactory figure. In fact, official statistics prove that the south in 1894 all? produced less corn by \$2,519,000 busnels than in 1891, while its cotton crop was slightly larger in 1814 than in 1891. the figures being 9,035,379 bales in 1891, and 9,088,000 in 1894. The south has lost 1,026,180 in cattle, or about 10 per cent, since 1890, though there has been a considerable increase in hogs. If the south had raised last year as much corn as in 1891, it would be better off by over \$30,000,000. These figures from official sources point unmistakably to a radical mistake in southern agriculture. — Humboldt (Tenn.) Messenger.

HERE AND THERE.

-Take care of the early-hatched chicks. It is these that you will have to depend upon for your early layers and show birds -All grades of paper, from the finest

note to the coarest variety of wrapping paper, have been made from the stalks and leaves of corn. -The grass crop of 1894 was worth \$100,000,000 more than the cotton crop

of that year. Grass is now king of all agricultural products. -There is an opportunity for some farmer in this country to Lake money out of sweet potatoes for the early northern markets. The potato wanted

there is a white, dry, mealy potato and

the earlier they are marketed the more

money there is in them. -Yes, it is lice that causes so much mortality among little chicks. may think they are free from them, but if you will sprinkle them with insect powder and then wrap them in a you would be surprised to find

the lice leaving the chicks. -The French government this year Kentucky tobacco (against 13,200,000 pounds of heavy Kentucky (against 660,000 kentucky (against heavy Kentucky (against 660,000 pounds last year), 4,840,000 pounds of burley (against 4,500,600 pounds last

PERSONAL AND LITERARY.

-August Strindberg, the famous Swedish novelist, is said to be hope-lessly ill in Paris. Despite his former arge income, he is also reported to be poverty-stricken and dependent upon his relatives in Copenhagen.

-Calhoun's voice was sharp, rasping and not pleasant to hear. His gestion lations were rapid and far from graceful, and he had a way of emphasizing a point by jerking his tall body back wards and forwards in a most active and inelegant way.

-Miss Beatrice Harraden, the authoress of "Ships that Pass in the Night," is busily engaged upon a new work dealing exclusively with English ife. Like Bret Harte in his early days. liss Harraden, with a wisdom of the heart, has known how to discover and lay bare ore under a hard and varied surface. Dr. Conan Doyle included her name in a recent article among the twelve most promising young writers

-Pay Inspector James Fulton, who died the other day as senior officer of the naval pay corps, had seen less sea duty than any other man of his rank. He had been at sea in all less than eight years. His term of shore duty footed up more than twenty-three years, and he had been unemployed just four years. Several men much b low him in rank have far exceeded his sea service, though few as long as twenty years in the corps have been as short a time unemployed.

-Edward O. Atkinson, the Boston economist, gave a novel dinner the other night in Washington at the residence of Assistant Secretary Hamlin Seven courses, all cooked by Mr. At kinson, were served. The entire cos of the dinner, exclusive of the floral decorations, was one dollar and fifty cents. Those present, besides Mr. At kinson, were Secretary and Mrs. John G. Carlisle, Secretary and Miss Morton, ex-Postpuster-tieneral and Mrs. W. S. Bissell, the Japanese minister and Mr. and Mrs. Hamlin.

-E. C. Squier's book on the Mosquito coast, published here a few years ago, gives a pretty clear hint of King George William Clarence's relations to Great Britain Mr. Squier found the king living in the house of the British consul. The young monarch was uncere-monlously bidden to "Get up" by the consul's negro maid servant, aad hav ing risen George went to a neighboring stream to wash his face. Mr. Squier desiring to be presented to the king, the consul shouted him back to the house, and on his return said: "George this gentleman has come to see you the real king in the Mosquito terri-
