THE WHEEL Is The Life of a Buggy

A—Wearing surface being 1-8 inch thicker than flat tire, does away with stretching of tire, adds greatly to reinforcement of felloe, forming strong arch which prevents flat tening of felloe between spokes—**POSITIVELY NO LOOSE TIRES.**
 B—Oval surface means less contact with the ground. Wheels fitted with this tire will draw easier than the flat tire.
 C—Lips or flange forms a perfect clamp. Does away with split felloes; prevents tire from slipping side-ways and keeps paint from being worn off of felloe.
 These lips extend over felloe and are compressed to rim, keeping out moisture between tire and felloe, thus preventing wheels from taking on dish.
 We use only four bolts to hold on Joint Clips. This means 14 less holes through felloe, prevents splitting and bolts getting loose; also making it easier to wash wheel.
 This is no experiment—10,000 sets in use and no complaints whatever. We guarantee all wheels fitted with this tire.
