

ABOUT Work Clothes

We've been devoting a great deal of attention to dress clothes these last few months. But although we excel in dress clothes, we have work-clothes of the best quality. Our theory is that the workingman and farmer should not wear "just anything cheap" for work, but should wear merchandise of the best quality—because he'll save money by it in the long run.

The Raincoats

Corduroy trousers, duck Trousers, woolen and cotton shirts, boots and work shoes that we are showing are of the best quality. And, what's better, we're able to sell them reasonable because they were purchased months ago.

In the Boy's Department there's Raincoats, Boots, Shoes and Trousers for the little fellows also.

VISIT NORTHERN DAIRY SECTIONS

Louisiana Farmers Make Long Trip to See Great Dairy Centers in Wisconsin and Illinois

The dairy observation party composed of 64 dairy farmers and others interested in the dairy industry returned October 13 from a ten-day tour of the leading milk-producing sections of Wisconsin, including visits to the University of Wisconsin and the University of Illinois and a stay of three days at the National Dairy Show at Chicago. The party was composed of 53 persons from Louisiana and 11 from Mississippi.

The tour was made under the direction of C. H. Staples, dairy husbandman of the Extension Division, Louisiana State University, who planned the trip and made all arrangements for it. Two pullman sleepers were placed at the disposal of the party by the Illinois Central railroad and representatives of the road accompanied the tourists on the entire trip.

In Wisconsin the dairy farmers first stopped at Fort Atkinson, where they visited Hoard's Guernsey farm; the James Manufacturing Company, makers of dairy farm equipment; the plant of Hoard's dairyman a weekly publication devoted to the dairy industry;

\$100 Reward, \$100

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages and that is catarrh. Catarrh being greatly influenced by constitutional conditions requires constitutional treatment. Hall's Catarrh Medicine is taken internally and acts thru the Blood on the Mucous Surfaces of the system thereby destroying the foundation of the disease, giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in the curative powers of Hall's Catarrh Medicine that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials. Address P. J. CHENEY & CO., Toledo, Ohio. Sold by all Druggists, etc.

and a number of leading dairy farms in that vicinity. At each place the visitors were taken in charge by the owner and shown over the farm and through the barns. Frequent questions on feeding, producing of cows, raising calves, crops, marketing products, etc., were asked by the visitors to which answers in detail were readily given. These replies were very instructive. Not only was each farmer thoroughly familiar with the records of his cows but seemed to know just what his neighbors' cows were producing also. Short addresses were made by A. J. Glover and P. C. Burchard, editors of Hoard's Dairyman. "The secret of success in dairying," said Mr. Glover, "is to get good cows good equipment and to keep the premises clean and attractive by the use of paint and whitewash. A man who does these things will soon become so interested in the business that it will not be drudgery." Mr. Burchard spoke on the value of cow-testing associations, which he said were a most important factor in the dairy industry. "Testing milk is the only accurate means of telling what a cow can do," said Mr. Burchard. "In Wisconsin there are 250,000 cows on test, which makes it possible to gradually increase the average production. The average production per cow in the state has increased 1000 pounds in the last 10 years."

From Fort Atkinson the party proceeded to Waukesha, where they spent a half day visiting the dairy herds of that county. Waukesha County is said to have more dairy cows than any like area in the United States. The county agent took charge of the party and saw to it that the visitors made the most of the brief time allotted to Waukesha. The dairy barns here, as elsewhere, were large and modern, equipped in many instances with steel stanchions, cement floors, running water, electric lights, ventilation systems, feed carriers, silos, etc. A community sales pavilion in which auction sales of dairy cattle are held four times a year was one of the many interesting things shown the visitors and which indicated the extent the development of the dairying industry had reached in Waukesha County.

Visit University of Wisconsin
The next place visited was Madison, where all of one morning was spent inspecting the buildings, equipment and livestock of the college of agriculture, University of Wisconsin. Short talks were made by different professors in the college as their departments were visited. The enrollment

No Worms in a Healthy Child
All children troubled with worms have an unhealthy color, which indicates poor blood, and as a rule, there is more or less stomach disturbance. GROVE'S TASTELESS CHILL TONIC given regularly for two or three weeks will enrich the blood, improve the digestion, and act as a General Strengthening Tonic to the whole system. Nature will then throw off or dispel the worms, and the child will be in perfect health. Pleasant to take. 60c per bottle.

ment in the University was 6832 students, of which 800 were taking agricultural courses. At noon luncheon and address of welcome was delivered by Governor Phillips of Wisconsin, who said that a state cannot make a better investment than in an agricultural college. Improved agriculture, as taught by the State University, had made Wisconsin rich, he said. In response to the governor's welcome, Superintendent Harris of the Louisiana dairy farmer seemed to love the thing he was engaged in. "I have gained the impression that man up here must own a few good cows and a pure-bred bull before he can be admitted to good society," said Mr. Harris.

Dean H. L. Russell, of the college of agriculture, stated all agricultural endeavor was concentrated at the state University. All branches of agriculture have their organizations, he said, with their central offices at the University. Organization and co-operation is the watchword. Every movement is taken up with these organizations and all resources are directed to agricultural education.

See Cheese Making Center
After leaving Madison, the next place visited was Monroe, the county seat of Green County, in the southern part of the state. Green County, which is 24 miles square, has 65,000 head of cattle of which 40,500 are dairy cows in active production, and is said to be the greatest cheese-producing district of like area in the world. There are 143 cheese factories in the county, which furnish markets for most of the milk produced. Green County furnished a striking example of what dairying will do to build up the soil and increase land values. Twenty-five or 30 years ago the farmers found it necessary to make a change in their farming operations as the long continued growing of wheat had depleted the soil to such an extent that this crop was no longer profitable. In fact many of the farming lands were sold for taxes. The same lands today are selling at from \$250 to \$300 an acre, and dairying is responsible for this increase in value. The annual production of dairy products in this county now amount to \$8,000,000.

At the National Dairy Show
Wednesday, Thursday and Friday, October 8, 9, and 10, were spent at the National Dairy Show at Chicago, where the visitors saw representatives of the leading dairy breeds exhibited and judged, and attended the National sales. They saw a Holstein male calf, three and one-half months old, sell for \$6000, a Jersey bull sell for \$5100 and a Jersey cow bring \$3300. At the Jersey sale 40 cattle brought an average price of \$1453. A. H. Henderson of Ruston, a member of the Louisiana delegation, bought two Jersey cows in the sale, one for \$1700 and the other

for \$1500. Professor Prescott bought five registered Guernseys at a private sale, and H. R. Loranger of Hammond returned to Wisconsin with the intention of purchasing two carloads of Holstein cows.
Among other things of interest at the Dairy Show were exhibits of the latest inventions for dealing with the production and marketing of dairy products and an educational exhibit of milk products and their uses by the United States Department of Agriculture. Talks were made by dairy experts, including Dr. E. V. McCollum of Johns Hopkins University, who lectured on his discoveries in milk nutrition. The Louisiana-Mississippi delegation found time to visit points of interest in Chicago including the Swift packing plant, where they were entertained at luncheon.

The University of Illinois
Saturday, October 11, was spent at the University of Illinois. The morning was devoted to inspecting the buildings and equipment and the afternoon to a visit to the college farm and livestock barns. An experiment in corn production covering a period of forty years was among the interesting things pointed out to the visitors. An informal talk by Dean Davenport of the college of agriculture was one of the events of the day most enjoyed by the visitors. He said that he welcomed the delegation with especial warmth because it was led by Prof. W. R. Dodson, whom he regarded as a man of the highest worth and standing in the agricultural field.

The Dean stated that the agricultural college of the University of Illinois was made what it is by the people of the state, led by the farmers who demanded it. The farmers led the movement for the development of the college. The farmers of Illinois realize that the agricultural college costs a lot of money, said the Dean, but they also realize that it would cost them much more to attempt to farm without its help. "Things are going ahead in Illinois," continued Dr. Davenport. "We have arrested the down grade and are started in the right direction. Farmers are looking more and more to the college for help and guidance." More than 1100 students are enrolled for agricultural courses in the University of Illinois, which has a total enrollment of about seven thousand. Dean Davenport said that Louisiana was fortunate in having the State University and the Agricultural College combined and organized as one institution and added that only by such organization could the best development and the best results be obtained.

ASSOCIATION SAYS

HOLD THE COTTON

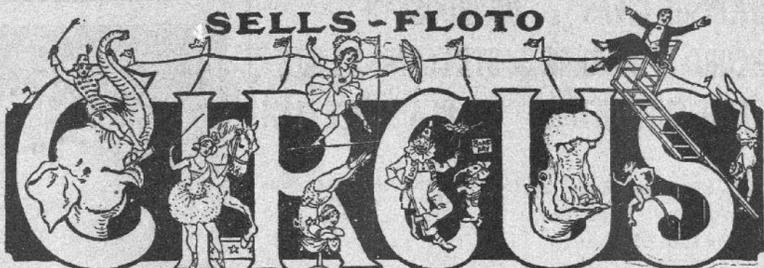

AMERICAN COTTON ASSOCIATION CLAIMS THAT COTTON SHOULD BRING 40c PER POUND

Notwithstanding the fact that growing out of war conditions the demand for cotton is and will continue to be the greatest in the history of the world, the production in the South this year will be the smallest in a decade, say officials of the American Cotton Association after completing a survey of world needs and conditions in the United States. It is calculated by the Association experts that 55,000,000 bales or 15 1/2 lbs. for every human being will be required each year. Association officials on the other hand point out that the crop in the south this year will hardly exceed 9,000,000 bales whereas it has averaged for several years 13,000,000 bales.

The answer is "hold your cotton" says Grundy Cooper of Alexandria, vice-chairman of the Louisiana division of the American Cotton Association. "The farmer is master of the cotton situation and should hold for the maximum price as the world must buy an the spinners are realizing that they must pay the price. A very recent survey disclosed that Great Britain has only two weeks raw cotton supply on hand. Cotton at 40 cents a pound is the cheapest raw material being sold in the world's market." W. B. Thompson, prominent New Orleans factor and president of the Louisiana division of the American Cotton Association pointed out recently that never was the time more ripe or conditions more urgent for an efficient strong organization of the planters and the other business interests of this state. "The American Cotton Association," said Mr. Thompson, "is so well founded upon sane practical business principles that after the big membership drive the latter part of November when I am confident the people of this state will respond in large numbers we will have an organization in Louisiana co-operating with similar organizations in every cotton producing state and assuring such thorough protection to the cotton interests as will bring at last to the planter a price that will mean the elimination of child and female labor on the plantations, the payment of a living wage to the workers, better homes, better schools, better roads and better churches and every factor that will bring the south into its own and work constantly toward the economic, social and moral uplift of the entire state."
The American Cotton Association will continue to push the building of warehouses. The South has been losing around \$50,000,000 annually on rotten cotton. The Association by se-
