The Glowworm's Rays. The glowworm's light is said to have been shown to be due to the emission of rays similar to Roentgen's. Three hundred glowworms were caught near Kioto and placed before photographic plates screened from the light by several thicknesses of paper, together with plates of brass, copper and aluminum. A piece of cardboard with a hole in it was placed between the metal and the photographic plate, and for two days the arrangement was kept in a chamber sheltered from all foreign lights. On developing the plate, however, it was found to be blackened, except the part opposite the hole in the cardboard. The rays of the glowworm would appear, however, to penetrate metal and excite

Generosity Among Soldiers.

The sight of the war cured the

writer of one notion-that the military

profession may tend to make those

who follow it brutal and cruel. On

like instinctive hostility to one's fel-

lows that is developed by the social struggle for existence. All soldiers,

whether officers or privates, seem to

be engaged, on the other hand, in a

kind of competition of generosity. It

is a great point with them-a kind of

invariable rule of conduct-to be

ready to share what they have with

others. This rule of generosity does

not seem to waste much sympathy on

one another's physical sufferings.

They bear their own without com-

plaint, and seldom ask favors when

to "grub" or shelter, they will give a

comrade, or even a stranger, better

than they have themselves, if they

possibly can. And the work of an

officer, even in the most active and

terrible campaigning, seems to be

easily consistent with the finest man-

liness and most delicate sympathy.

And yet we should not encourage war

A Mecca for Naturalists-Skeletons of West Wonderful Thing at Camp Wikoff From a Boy's Standpoint.

A woman and her little son went to the camp at Montauk, L. I., and for and the St. Elias Alps, lies a most re- hours he gazed at the strange panomarkable tract in Alaska," remarked | rama, forgetting hunger and weariness G. W. Stephens of Seattle. "I went | and barely speaking a word. On the train home she asked him what scene in particular had impressed him most. Without hesitation he replied: "Oh! Jimmy Wallace!"

For a moment she was surprised; then she realized that from a boy's standpoint Jimmy Wallace probably was the greatest attraction in that strange city of tents by the sea. She first saw him early in the afternoon, a small black boy, with a sweet, childish face, gazing up into an officer's eyes with adoring approbation. The officer was saving :

"Now, Jimmy, don't you do it again. You gave me an awful scare when they said that they could not find you. I thought you had gotten on some train and been carried off. Don't wander far from the camp!"

And Jimmy touched his ridiculous cap in true military style and scampered away.

Later the woman found him adjusting his suspender on the one button of his ragged trousers, and for a blissful ten minutes she and her son had Jimmy all to themselves. At first he was shy and gazed at his visitors with his gentle eyes just as any unimportant little boy might have done. stranded trees, logs, stumps and But presently he lost himself in the glory of his achievements and possessions, and then, indeed, was Jimmy courses fringed with vegetation mirror- brilliant.

regretfully down at his airy costume : to think the strangest, the 'I'se got a suit just like de boys, an' a gun, an' a little Spanish pony named Buffalo Bill, an' a mule named Jack, an' I'se got a little tent all fur myself up on de hill by de colonel'san'-an'-dat's what I got," with a

final burst of pride. The woman could not believe all that he told her, for he was certainly not more than 10 years old, so she went up to one of the Ninth cavalry and questioned him. Yes, it was all the contrary, it seems to make them true, the trooper said, but he had left more generous and kind. It is not out one item more touching than all to be supposed that it is war that the rest. While he was standing by makes them so; it is probable that the the colonel in that battle of Santiago removal of the professional soldier a bullet went clean through his left from the field of competition for existence among independent workers and foot, and when he was lifted up to be "business men" leaves him little carried back with the wounded, he chance to fall into that hungry and fox-

Fungi That Kill Locusts.

The Colonial Bacteriological institute, attached to the Cape of Good Hope (South Africa) department of agriculture, has issued its report for the year 1896. Though belated in appearance it is a valuable document as indicating the importance of the work carried out at the institute. Besides the elaborate experimental investigations which have been conducted on sentiments any more than we should rinderpest, we note various directions in which the activities of the staff because a yellow fever epidemic dehave been engaged. For example, no velops fine cases of heroic self-sacriless than 1039 culture tubes of a locust destroying fungus have been forwarded to different parts of the country, and the reports received as to the There is a bank in a little country efficacy of this fungus are encouragtown up in the mountains of New ing. Bees gorge themselves with honey, then hang themselves up in festoons or curtains to the hive, and remain quiescent for hours. After a time wax scales appear, forced out from the wax pockets. The bees remove these scales with their natural forceps, carry the wax to the mouth and chew it for a time, thus changing it chemically. Wax-making is therefore an expensive industry, for it costs not only the time of the workers, but it is said that it takes twenty-one pounds of honey to make one pound of wax.
