With two 14-inch bottoms, under Iniversal Tractor, Model D, as ordinary 3-plow machine. The su-perior efficiency of the Moline Uniwersal is due to its higher speed, 3½ miles an hour, two bottoms at 3½ miles giving the same number of plow-miles as three bottoms at 2½

Plowing at 31/2 miles an hour gives ideal results, the ground being pulverized more thoroughly than at slower speeds, with less air space. Tough sod that cannot be turned at all at 21/2 miles an hour is plowed

with ease. Perfect work is assured with the Moline Universal through the advantageous position of the operator, who sits on the implement, where he must sit in order to do good work. The Moline Universal is easily handled, turns short, and backs as readily as t goes forward.

Waste of time in the field is eliminated and the tractor kept at productive work a maximum number of hours a day through a complete elec-tric starting and lighting system. The Moline Universal is the only tractor thus regularly equipped,

of the Moline Universal lies in its perfected overhead-valve engine and two-wheel construction. The engine develops 18 horsepower at the belt and 9 at the drawbar, every ounce of which is available for pull. There are no dead wheels to drag along that only carry weight and steer.

For plowing in extremely soft ground, the Moline Universal is equipped with a differential lock that enables the two drive wheels to be locked together, doubling their pull-

When plowing the land wheel is raised so that the tractor is level. The wheel is very easily and quickly

raised or lowered. The light weight of the Moline Universal, 3380 pounds, and its high clearance, 29½ inches, make it adapted for all other field work, besides plowing. With it one man can plant 40 acres a day, cultivate 20 acres a day, harvest 25 acres a day, or do any other work with equal speed. It is the ideal tractor for any sized farm, practically eliminating horses and solving the farm help problem. Call and let us show your this re-
