

ROMINENT PEOPLE

A MODERN PORTIA

To Miss Lucille Pugh, the criminal lawyer of New York, belongs the distinction of being the first of her sex to defend a man accused of murder. This honor Miss Pugh accepts with the same unassuming frankness that characterized her conduct in the defense of Leroy Poindexter, the negro, whom she saved from the electric chair.

Thanks to the skill with which Miss Pugh handled the case the first jury disagreed, and at the second trial she obtained a verdict of manslaughter in the second degree.

When trying her now famous case, Miss Pugh made a remarkable picture. Standing but an inch over five feet, her auburn hair parted at the side and drawn tightly around her shapely head, her brown eyes glancing from the tense face of the accused negro to the jury of twelve white men, her right hand outstretched in an appealing manner toward them, her left

indicating the prisoner, she subtly sought to force into the minds of her hearers the innocence of the man she was defending. One of the best-known court officials, who has attended for the last twenty years all the notable criminal trials in New York, stated that in his opinion, her defense was the most capable he had ever heard.

HEAD OF ITALY'S NAVY

Prince Louis of Savoy, duke of the Abruzzi, admiral of the fleet of Italy, is known to Americans largely through the American associations of his interesting career. He has made several visits to this country, one of them resulting in a love affair which, after world-wide publicity, left the duke still a bachelor. He is distinguished as an explorer and mountain climber, and at the time of the earthquake which destroyed Messina, as well as last January, when Avezzano and its vicinity were roughly shaken, he was a leader in relief work.

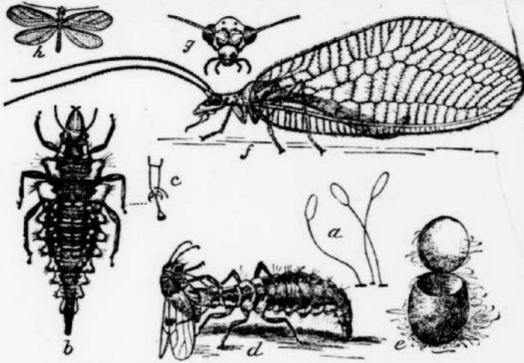

From his earliest youth the duke has made his life one of activity and of service. He entered the navy and came to the United States on board an Italian warship when he was eighteen years old. He became so interested on his first trip here that he returned some five or six years later, and then he came again about ten years ago. On this latter tour of the country it was persistently rumored that he and Miss Katherine Elkins, daughter of the West Virginia senator, were engaged to be married.

The duke of Abruzzi won more renown as an explorer and climber of mountain peaks than in any other of the pursuits to which he had given attention. He ascended Mount Elias, Alaska, made his way to a height of 24,000 feet, the greatest on record, in the Himalayas, and he penetrated far into the recesses of the Uganda district of Africa.

Italy's sea chief is only forty-two years old. He is more like an American business man in appearance than a European naval officer.

HUNDREDS OF DIFFERENT INSECT PESTS

Lace-Wing Fly—A, Eggs; B, Larva; C, Foot; D, Larva Devouring Pear Tree Psylla; E, Cocoon; G, Head; F and H, Adult.

(By J. W. FOLSOM.) A field of red clover in full bloom is taken. Many influences combine to reduce the crop of seed. The worst injuries to the seed are insidious in their nature, and are caused by insects. These injuries are of three classes: (1) Those of a negative kind due to lack of pollination. (2) The positive injuries due to miscellaneous insects that eat clover heads in an incidental way. (3) The positive injuries caused by insects that feed solely upon clover seeds or forets. The first two groups are relatively unimportant in comparison with the last.

The importance of the bumblebee in the pollination of red clover is so well established as to need no discussion. That of the honeybee, however, is not sufficiently recognized. The honeybee pollinizes clover to some extent, even though its tongue is two millimeters shorter than the average corolla tube. A field of red clover is always thronged with honeybees if any of them are being kept within a mile or two of the place; and these bees secure nectar from flowers that are under-derized, especially in times of drought, when most of the flowers are smaller than usual; also from flowers that secrete a copious amount of nectar. The bees, bumblebees especially, should be protected always. They are the best friends of the clover grower.

Early pasturing is the secret of a good seed crop, as the growers in New York, Ohio, Michigan and other states have found. The explanation is simple. The fact is that pasturing gives a good seed crop for the reason that it delays the heading of the plant until a time when the seed-midges and seed chalcids are no longer on the wing and laying eggs. When precautions are not taken against these pests, they can be counted upon every year to destroy most of the clover seed. In some localities these two insects eat from 50 to 75 per cent of the red clover seed every year without

Some of the insects of the clover field are, of course, beneficial. Such are those that pollinize the flowers—bumblebees and, to some extent, honey bees, as well as those that act as checks on the injurious insects. Most of the clover insects are not limited to clover, but to other food plants as well. The seed-midge and the seed-caterpillar are, however, confined to the clovers, and the seed-chalcid to clovers and alfalfa so far as known. The root-borer is said to eat peas as well as clover. The hay-worm has been found only on hay as yet, but the moth has been raised from masses of dead grape leaves taken in a vineyard. The leaf weevil is reported from beans and timothy, as well as clover and alfalfa. The clover louse has been a pest of the worst kind on peas and has a long list of food plants. Of the less important clover insects, a few have no other food plant; but the majority can easily maintain their existence when no clover is at hand.

The combined efforts of all the insects are sufficient to reduce the hay crop materially every year. Aside from the occasional conspicuous injury, there is every year a steady drain on the plant through the attacks of insects. This annual drain is not noticed for the very reason that it occurs every year. If we could keep all the insects out of the clover field,

we should get more hay. If we could exclude all except the bumblebees and the honeybees, we should undoubtedly get an immense increase in the yield of seed.

Those who raise clover seed on a commercial scale owe their success to methods which operate chiefly against the insect enemies of seed—whether the growers are aware of it or not. Under the same conditions of soil and climate, one man is able to get a good crop of seed and his nearest neighbor is not.

Many farmers do not attempt to raise their own clover seed. Those who do, get more or less of a crop according to circumstances. In the black soil of the corn belt, one and one-half bushels of seed per acre is about the average yield for clover; the soil is not the best for this crop. Frequently too little seed is sown, and always the seed insects ravage the

crop unless certain precautions are taken. Many influences combine to reduce the crop of seed. The worst injuries to the seed are insidious in their nature, and are caused by insects. These injuries are of three classes: (1) Those of a negative kind due to lack of pollination. (2) The positive injuries due to miscellaneous insects that eat clover heads in an incidental way. hindrance. The farmer gets only what the insects leave. If he gets two bushels of seed to the acre, the insects have, perhaps, already eaten from two to six bushels off the same acre.

CARE FOR THE LITTLE CHICKS

Special Attention Must be Given During First Ten Days—Essentials for Successful Brooding

(By H. L. KEMPSTER, Missouri Experiment Station.)

New hatched chicks require special food and care, especially during the first ten days. After they are ten days old the following mixture should be kept in a trough where the chicks can run to it at all times. Thirty parts cornmeal, 30 parts wheat middlings, 10 parts pure beef scrap sifted fine and one part bone meal, and finely cut green food.

As the chicks increase in size the mixed chick food can be replaced by coarser grains. At this stage it may be advisable to feed a wet mash once a day, about 4 p. m. The chicks should be given no more feed than they will eat up before going to roost. As they increase in size they should have access to dry mash in a hopper, where they can help themselves.

Some essentials for successful brooding are, clean food, consisting of both cracked grains and ground feed; animal food, such as milk, buttermilk or commercial beef scraps; extra bone-making material, such as bonemeal; clear water; plenty of shade; comfortable dry quarters; freedom from lice, and access to clean, fresh earth.

European Food Supply.

This year the entire world will look very largely to the United States for its supply of food. Every possible effort should be exerted to meet the needs that will be thrust upon us.

Fight on Weed Crop.

The entire forces of the farm should now be ready for an onslaught on the weed crop. Have the plows bright, the harrows and the disks mended and all ready to use.

Rid Farm of Rats.

A systematic and relentless campaign against rats, the construction of rat-proof structures and the prevention of refuse food from accumulating so as to maintain the pesky rodents, will go far towards ridding the farm of these pests.

Keep Little Pigs Busy.

The little pigs must be kept busy a part of the time to prevent their getting too fat and lazy, which will encourage thumps.

"MOVIES" IN THE CHURCHES

Called Silent Sermons and Have Become Exceedingly Popular in Numerous Sections.

Hundreds of churches throughout the country are now equipped with all the machinery used for giving moving picture shows. The church movie, which has aptly been called the silent sermon, is proving a great success in attracting large congregations.

A great variety of special films have been prepared suitable for such use, and a clergyman in selecting a subject to his taste finds a surprising variety to choose from. There are films suitable for sermons on all the commandments, as well as many of the most familiar texts in the Bible. Several of the firms making a specialty of such films issue regular catalogues to assist clergymen in selecting silent sermons.

Scores of churches the projecting machines are part of the church furniture. The rigid laws laid down by the fire departments apply as well to churches as to theaters and the machines must be set up in fireproof metallic rooms. The electric wiring is arranged so that the sermon may be turned on conveniently in the main church auditorium or the lecture or chapter rooms.

The screens and the rest of the equipment are of the usual standard type. Many of the film houses which supply churches have small theaters or exhibition rooms where a clergyman may have a trial exhibition of a silent sermon before definitely ordering it.

The film sermons are rented out at a regular rate, according to their length and the nature of the production. In producing these silent sermons a regular church service is followed, consisting of a singing of hymns, prayers and recitation of the lesson. The films are carefully chosen to fit into the place assigned them. Some of the catalogues of silent sermons suggest church services to accompany them, giving the numbers of appropriate hymns and Scriptural lessons.

The Polymuriel Garment.

Some ladies in New York are at work just now hunting for the philosopher's stone. They claim to believe that a "polymuriel" garment in feminine dress can be designed that will suitably clothe every type of figure, every age, for every occasion, every day, from getting up to going to bed, from the period when the girl first comes out of the nursery till she goes to her grave.

The philosopher never found the mythical stone that could turn everything to gold. Clothes problems, like the poor, will be with us always. There are ways and means of eliminating some of the problems, and it is possible to reduce all fractions except the "vulgar fractions" of mathematics to their lowest terms.

But it is a foolish waste of time and energy to hunt for the impossible. And it is impossible to find one style of dress suitable for everybody.

Nobody who is fastidious wishes to wear one costume from early morning till late at night. There is a positive psychological benefit in the bath and change of toilet that separate the working hours of the day from the hours of relaxation. Not even two (or a collection of) "polymuriels" that could be worn alternately would solve our clothes needs. Suitable clothes for street and travel and business are not suitable for indoor wear.—Belle Armstrong Whitney, in Good House.

War's Effects in Labrador.

The far-reaching influences of the present war are illustrated by the effect it is having on the Indian and half-breed trappers of Labrador and Hudson bay, says an exchange. The various companies which carry on the traffic in pelts in this northern region are curtailing their operations, and although steamers of the Newfoundland sealing fleet will go north in the coming summer, as in previous years, to take supplies for the fur-trading posts and to embark the stocks of furs and fish collected during the past twelve months, they will carry much smaller quantities of trading goods and provisions than heretofore. This policy is dictated by the fact that since the war began valuable furs have been a drug in the world's markets, and little prospect of any betterment is foreshadowed until after hostilities terminate and old-time conditions of prosperity revive.

Pick Up Earth's Can of Gold.

A workman excavating for a new building uncovered with his pickax a tin can filled with gold. The amount is estimated at between \$2,000 and \$5,000. The money was divided among the men. The coins, of \$2.50, \$5, \$10 and \$20 pieces, were dated from 1840 to 1855, leaving the impression that the owner had put them in the hiding place before the Civil war. It is thought he enlisted and intended to get the money after his return.—Milwaukee Dispatch to the New York Herald.

To Be World's Highest Dam.

The United States reclamation service is blocking the Boise river canyon, at Arrowrock, with a dam 350 feet high. This will be the highest dam in the world. It will have a length of 1,075 feet at the top and will contain 530,000 cubic yards of material.

During construction the waters are being diverted through a tunnel running around the dam. The tunnel is 487 feet long and measures 25 by 30 feet. It is large enough to pass the whole of the Boise river.

A Veritable Solomon.

"Blinks is probably the wisest man in the world."
"Why can an outburst?"
"He can tell a woman's disposition without marrying her."—Philadelphia Enquirer.

Little Difference.

WANTED THE REGULAR TOOLS

At Least Colored Man Was Sure of One Thing, He Wouldn't Work With the Pie.

An old negro man was standing by a grassy yard in front of a Chinaman's washhouse when a woman walked to the street corner near by to board a car. The old man approached her and, lifting his hat, politely said: "Lady, can you tell me where I can obtain a job?"

He held in his hand a loosely wrapped package, from which protruded the edge of what was apparently a five-cent pie.

The lady replied that he might ask the Chinaman for the job of cutting the grass. So the colored man bargained with the Chinaman to cut the grass, for which he was to receive 25 cents.

Then it turns out that the Chinaman has no tools, and the colored man's lawn mower is a long way off at his home and he is disinclined to go after it, so the way is weary, the flesh tired.

Thadly finally suggested in a matter of fact way: "Are you going to cut the grass with the pie?" The colored man drew himself up with great dignity and replied, reprovingly: "Lady, I never cut grass with a pie."

Just Like Dad.

"What makes that boy so fidgety at the breakfast table?" growled the head of the family as he glared over the top of his paper.

"I suppose he's sitting for you to get through with the sport page so he can find out who won yesterday's game," said the boy's mother. "You're the same way yourself when the news man forgets to deliver the paper."

Peruvian Balsam.

Peruvian balsam, known the world over for its excellent properties, not come from Peru at all, but along a stretch of the coast of Ecuador.

Most of us who attempt to wear a mantle of greatness are disappointed in the fit.

If it is necessary to make a choice choose lazy men.

It's the high spots that knock out the rolling stones.

Geometry Re-quired.
Plato is said to have written his door: "Let no one ignorant of geometry enter here." Today restriction would reduce the list. Perhaps outside the list of those who are not one at all. All the arithmetical mathematicians he would no one at all. All the arithmetical mathematicians he would no one at all. All the arithmetical mathematicians he would no one at all.

Profane.
"What do you think of my new horn?" asked Mr. Flipper, as the bulb and producing a "boom" that was calculated to scare a trian out of his seven senses.

"I don't like it at all," replied the wife. "It sounds too much like the language you use when you are in the car."

Crisp little bits of Indian Corn, rolled thin as paper, and toasted to a golden brown.

Post Toasties

Have a sweetness and tasty goodness distinctively their own.

And all the way from raw material to your table not a human hand touches the food—clean and pure as snowflakes from the skies.

Ready to eat right from the package with cream and sugar or crushed fruit, Post Toasties are wonderfully delicious.

Sold by Grocers Everywhere

OUR NEW SUBMARINE CHIEF

Germany's remarkable development of submarine warfare has aroused the interest and action of every civilized nation, and the United States is not behind others in recognizing its importance. In order to develop the undersea arm of the American navy and to eliminate its present faults, Secretary Daniels has designated Capt. A. W. Grant, one of the highest ranking officers of his grade, to command the Atlantic submarine flotilla and exercise general supervision over that branch of the service. He already has got under way an organized effort to put every unit of the submarine flotilla in first-class condition to perform all of the functions for which it is designed, and much of his time is spent in Washington and at the various shore stations. His powers in the work of construction and development are very large, and he receives every possible assistance from the navy department.

As assistant in this important task, Captain Grant has Commander Yates Stirling, who is considered one of the leading experts on underwater craft and who last winter gave congress and the public some interesting information about the weaknesses of the vessels under his charge.

CONGRESSMAN SEES WASHINGTON

Congress adjourned and he entered on a vacation at his home in England. He is a confirmed form of vacationer, and his wife, Keating, is a confirmed tourist. The first thing he suggested the congressman is the capitol.

Sir Johnston Forbes Robertson, an English actor, recently sailed for London, after completing a farewell tour of the principal cities of this country. Just before sailing he said: "I am on her soil are to be well prepared and get ready. Establish compulsory military training."

BIG HAUL BY JOE MARTIN

Nineteen Elusive Bass Trapped by One Little Eel—Second Try Gets Seventeen More.

Smith, La.—Joe Martin has just brought in the finest mess of bass of the season, and with it a strange tale. He had 36 big-mouth black bass that he caught at two hauls with a string line. He was using small minnows for bait and had no luck. After fishing

that they went up in the Washington monument and saw it from the window of the tomb of George Washington at Mount Vernon, the bureau of engraving—even the pension committee. Every little card to send home to friends.

Russia, Biggest of Nations.

Russia lacks only ten longitudinal degrees of stretching half way round the earth, and possesses one-sixth of the land area of the planet. Russia's Asiatic possessions are 40 times as great as those of Japan, even since the Russo-Japanese war. The variety of Russia's resources make the empire not only to the United States as the best food producing country in the world, it leads all nations in mineral and timber supply.

Egg, Larva and Pupa of Cloverseed Chalcid.

we should get more hay. If we could exclude all except the bumblebees and the honeybees, we should undoubtedly get an immense increase in the yield of seed.
