

## ELDERLY PEOPLE HELPED FREE

The last years of life are the sweetest, and yet the most difficult to prolong. It is then that the greatest care is exercised in maintaining bodily health. But the chief care should always be with regard to the food you eat and whether you are digesting it properly. You should not allow yourself to become constipated.

No doubt you have tried salts and cathartic pills, purgative tablets, etc., and have come to the conclusion that they are violent in action and do but temporary good. Listen, then, to the voice of experience with regard to a wonderful and mild laxative, Dr. Caldwell's Syrup Pepsin. It is not new, only we are trying to find new friends for it.

A. A. Felts, of Johnston City, Ill., suffered from stomach trouble for six years and found his cure in Dr. Caldwell's Syrup Pepsin. His wife used it too with success. We could name hundreds of others. Some heard of it first through neighbors or friends, and through the doctor's offer to send any sufferer from a stomach, liver or bowel complaint a free sample bottle for trial, without charge. If you will send your name and address he will send you a trial bottle direct to your home. If it proves itself a wonderful medicine, you will not need to buy a 50-cent or \$1 bottle of your druggist, as all of them sell it. Old people, like children, should look for purity, and it is well to mention that the purity of this remedy is vouched for with the U. S. government. Also, though a free bottle is sent to prove its merits, results are always guaranteed from the regular bottles bought of druggists, who will refund your money if it does not satisfy you. Send at least for the free test bottle to-day.

If there is anything about your ailment that you don't understand, or if you want any medical advice, write to the doctor, and he will answer you fully. There is no charge for this service. The address is Dr. W. B. Caldwell, 201 Caldwell Bldg., Monticello, Ill.

**Family Medicine Chest.**  
Every mother of sons ought to keep an "accident box" containing a spool of adhesive plaster, a package of carbolated cotton, a bottle of boracic acid and some soft old linen. A fresh cut should be carefully bathed immediately and bandaged to keep out the dirt, which so often contains germs of lockjaw. If there is much bleeding, first close the wound with the plaster, then cover it with the cotton. An application of alcohol will easily remove the plaster.

**Automobilists Read This.**  
At the end of the trip when the eyes are stiff and inflamed from wind and dust, there is nothing quite so soothing as Doctor Mitchell's Eye Salve. Just a little particle rubbed along the eye lashes brings instant relief. At all drug or general stores or by mail. Price 25 cents. Hall & Ruckel, New York City.

**Monkey Had Good Memory.**  
During a performance in a variety theater at Copenhagen a monkey named Morris suddenly sprang off the stage and threw himself into the arms of a man in the audience. It was discovered that the man had been Morris' master four years before.

**For Colds and Gripp—Capudine.**  
The best remedy for Gripp and Colds is Hicks' Capudine. Relieves the aching and feverishness. Cures the cold—Headaches also. It's Liquid—Effects immediately—10, 25 and 50c at Drug Stores.

## DEHORNING CHUTE

DEVICE THAT WILL NOT HURT THE ANIMAL.

Plans for Building Pen That Holds the Head Securely, Thus Preventing Any Possible Accident.

An authority on the dehorning of cattle furnishes the following information on the construction of the chute for the operation:

Make the chute strong. Next make a plank table in front of the same about

two feet wide, three feet long and two and one-half feet from the ground. Then prepare a square with an eight-inch side out of plank and hinge it to the table a few inches from the chute at right angles to the face of the same, so that it can move freely from one side to the other. For the hinge use two good pieces of strap iron, preferably wagon tire, and let each extend clear across each side of the width of the square. To make the hinge wrap the end of the tire around a bolt staple secured to the table by taps beneath. Through the end of the tire opposite the hinge and about an inch from the

top face of the square bore a hole large enough for an inch and a half rope. You will then have two ropes attached to the top face of this square, and these are intended to pass over the neck of the animal and be secured by a lever at one end of the table. Another identical square is prepared, and this is set on the table facing the hinged square, but distant enough from it for the neck of an animal to be set between. The second square is braced firmly in a vertical position with blocks and steel braces. Two holes are bored through the table near the front side, through which a rope is passed to be placed over the nose of the animal. The head of the animal to be dehorned is held in position by the stationary square, against which the neck of the animal is bound by the hinged square.

### Seed Selection.

Careful and continued seed selection will pay many times for the work. Plants become adapted to the conditions under which they are grown and while it is desirable to try new varieties from other localities, such new seed should never be used for the entire acreage of any staple crop. After the new varieties become acclimated, they may be found better than those commonly grown. If such is the case, locally grown seed will then be on hand for the entire crop and there will be no loss.

### Weeding Small Fruits.

Do your weeding among the small fruits with mulching of swale hay, straw or forest leaves. This will save a large amount of hard work in hoeing. It holds the moisture, keeps the weeds from growing, keeps the fruit clean while growing and ripening. The fruit will grow much larger and of finer quality and certainly will bring better prices. Such has been my experience for many years.

### Essentials in Poultry Raising.

At all times I see that my poultry houses are well ventilated. In the winter a very slight crack at the top of the building will provide sufficient exit for the foul air to escape. This is provided with a shutter to prevent too strong a draft. In summer the opening is made much larger and the sides of the building are also open to let as much heat as possible escape. By this means and by proper attention to exercise, cleanliness, etc., my fowls are kept in excellent health and comfort. Not the least of their comforts is a dust bath placed where the sun can shine on it at all times. This bath is also provided with sulphur, tobacco dust or insect powder.

There is always a temptation to turn the stock on pasture before the grass has had a chance to get a start. At this time the animals will get little good from the pasture and they are likely to do much damage in tramping the wet soil. Let the ground get solid and the grass a good start before they go on it.

## BREEDERS WORK IN UNISON

Co-Operative Breeding is Sure Foundation for Future Prosperity Among Cattle Raisers.

Co-operative breeding, as viewed by a writer for Orange Judd Farmer, gives promise of great achievement in the future. As at present carried on much of our breeding is done in the dark. Unworthy sires are used. Breed is almost entirely ignored.

If a community will form an association, study the breeds, and carefully select the breed they like best, and is best suited to their conditions, and that they will be willing to stand by ever after, then they will have laid a sure foundation for future prosperity.

This much we know, that when an association is formed interest is aroused, and a desire for better things is inspired. Full-blood sires are bought, and if a man feels too poor to buy a good animal alone, two or three will go in together and buy. As good sires are bought, exchanges are made, so a choice animal can be kept near the same locality during the entire period of its usefulness.

Particular emphasis is placed upon the character and efficiency of the live business man, be in touch with every member, he should know what stock each one has, and what he desires to have. Through him exchanges are made, buyer and seller brought together. When they have stock to sell he carries advertising for the whole association, thus lessening the expense. He should have the registry books of the breed, so a prospective animal can be traced, and its worth determined. When animals are for sale they are reported to the secretary, so a buyer can find out by him just what can be bought, and where it can be bought, and a buyer will go to such a place, when he would not go from house to house in the uncertainty of finding what he wanted. In shipping there is also an advantage, as animals can be shipped much cheaper in carlots than singly.

Cow testing associations are apt to follow, friendliness is promoted and speakers may be obtained through the agency of such an association.

Lake Mills, Wis., is noted the world over for its cattle, because breeders have been working together raising one breed. A buyer has large numbers to pick from, he can buy in large lots, and he can get what he wants, and he is willing to pay the price.

### COLONY HOG HOUSE IS BEST

Litter Raised in Each Individual Building Avoids Crowding and Injury to Shotes.

Where all the hogs sleep together cold nights, two, three and sometimes four deep, it is not an unusual occurrence to find a nice shote overlain or mashed to death. The colony house solves the problem. A family is raised up in each individual house, hence there is no crowding of several sizes in one bed.

We have six of these houses made of fencing plank that has done good service in a fence 36 years. Some are hemlock and some poplar, the greater

The Colony Hog House.

part perfectly sound, except the nail holes. These houses are distributed over the farm in convenient places to feed and water.

The floor space is 48 square feet with seven feet front and five feet in the rear. The roofing is three-ply prepared paper, which makes a very serviceable roof.

### Cover the Manure Heap.

Piling the manure in the open insures a big waste. The Cornell Experiment station piled two tons of fresh horse manure in an exposed place. In five months it lost five per cent in gross weight, 60 per cent of its nitrogen, 47 per cent of its phosphoric acid and 76 per cent of its potash. Here was an average loss of 81 per cent in plant food, or more than the weight loss. In other words, the rotted, concentrated manure, ton for ton, was worth less than the fresh manure.

### Value of Timothy.

Timothy is grown rather for hay than for pasture and yet in certain areas of the prairie it is much relied upon for pasture at the present time.

### The Dairy Cow.

Every dollar added to the average income from the dairy cow in the United States adds over \$20,000,000 to the nation's production of wealth.

### Cure for Mange.

Following is a recommended cure for mange in hogs: Creosote, 1 1/2 ounces; lard, two pounds. Mix well and apply to the affected parts of the body. Or, sulphur, one-half pound; lard, two pounds. Mix and apply as suggested above. Turpentine and sulphur at the rate of ten parts of the former to one of the latter is another effective remedy. The same mixture may be used for a dog, but the animal should be carefully muzzled for the lard-creosote mixture, else he might make himself very sick by licking it off.

Fix up a comfortable box stall for the mare and her coming baby colt. Make it roomy and warm and supply it with plenty of soft bedding. Previous to foaling, feed the mare oats, wheat bran mash, and about half pint of linseed meal twice daily.

Hogs are a good price now, and indications are that they will be better by next summer and fall. Corn, too, is high, so make the corn go as far as possible with pasture, skimmed milk, slops, and supplementary foods.

## Three Meals at Once.

"Now, Mary," said her mistress, "you must come to the door of the drawing room and say: 'Breakfast is ready, and supper is ready, but dinner is served.'"

The newly corralled domestic inwardly digested the concise instructions, and that evening convulsed the guests who were awaiting the announcement of dinner by stepping between the portieres, dropping a courtesy and repeating: "Breakfast is ready, and supper is ready, but dinner is served!"

## Don't Poison Baby.

Forty years ago almost every mother thought her child must have PAREGORIC or laudanum to make it sleep. These drugs will produce sleep, and a FEW DROPS TOO MANY will produce the SLEEP FROM WHICH THERE IS NO WAKING. Many are the children who have been killed or whose health has been ruined for life by paregoric, laudanum and morphine, each of which is a narcotic product of opium. Druggists are prohibited from selling either of the narcotics named to children at all, or to anybody without labelling them "poison." The definition of "narcotic" is: "A medicine which relieves pain and produces sleep, but which in poisonous doses produces stupor, coma, convulsions and death." The taste and smell of medicines containing opium are disguised, and sold under the names of "Drops," "Cordials," "Soothing Syrups," etc. You should not permit any medicine to be given to your children without you or your physician know of what it is composed. CASTORIA DOES NOT CONTAIN NARCOTICS, if it bears the signature of Chas. H. Fletcher.

### Kicking Kindness Into Him.

The benevolent old gentleman got busy when he saw four boys eight or nine years of age attack one boy of about the same age.

"You mustn't, you mustn't," he said, when he had hauled them off, "attack your little companion this way. What has he done to deserve such harsh treatment?"

The four boys glowered sullenly while the one boy whimpered as he thought what would happen to him when the benevolent gentleman went on his way.

"Well," said one of the four at last, "he won't join the band of kindness our teacher wants to get up at school!"
