\$30.00, \$50.00 and \$75.00. All the popular 50c Blue Amberol Records in the catalog. Get the new September list.

DISINFECTANTS

A good time to spray and disinfect Barns and Hen Houses. Use KRESO DIP or Kreso Disinfectant. \$1.50 per gallon.

VAGARIES OF THE MEMORY

Psychologists Have Given Matter Much Study, but It Is Still Much of a Mystery.

The psychologists have given much study to the vagaries of memory, which are among the most interesting of mysteries. Why do we forget certain things and remember others? This question, together with many others of a like nature, seems as yet to be unanswered.

William James, in the course of a paper on the subject, says something which we have tried in vain to recall will afterward, when we have given over the attempt, "saunter into the mind" as innocently as if it had never been summoned.

Then, too, curiously enough, bygone experiences will revive after years of oblivion, often as the result of some cerebral disease or accident.

Such a case was that of the young woman in Germany who could neither read nor write, but who was held to be possessed of a devil, since, in a fever, she was heard raving in Latin Greek and in an obscure rabbinical dialect of Hebrew. Pages and pages of her talk were written down, and they were found to consist of sentences intelligible in themselves, but not having the slightest connection with one another.

Finally the mystery was cleared up by a physician, who traced the girl's history to the age of nine. Then, he learned, she had been taken to the house of an old pastor, a great Hebrew scholar. She remained in this house until the pastor's death. It had been for years the old scholar's custom to walk up and down a passage near the kitchen and read to himself in a loud voice. His books were examined, and among them many of the passages taken down at the girl's bedside were identified. The theory of demonaical possession was, of course, then abandoned.

OLD GREEK HAD RIGHT IDEA

Xenophon's Conception of the Dignity and Value of Agriculture is Beyond Criticism.

Xenophon's work on agriculture lacks the divine afflatus of the Georgics and the patient, comprehensive research of Varro's "De Re Rustica;" its more modest scope is shown by the name he gave it: "Oeconomics," or, as Etienne de La Boetie rendered it, "La Mesagerie"—a capital word, that has gone down in life!

Xenophon traced the rule of the farm on rather general lines; he started from the principle that, in the main, agriculture is made up of common sense and diligence.

To critics who blame him as unscientific let it be said that in southern farming, at least, these two qualities will carry the cultivator further than the most beautiful steam plow.

The standpoint from which he viewed the agriculturist was not without elevation, though it did not strike him, as it struck Virgil, that the husbandman was a sort of high priest. But neither did he regard him as the mere servant of private and selfish ends.

The landed proprietor was the pillar of society and agriculture the lifeblood of the state; the fields grew more than corn—they grew men. This was his point of view.—New York Telegram.

Weight of One's Head.

Do you know how much your head weighs? It is not the size, but the contents that counts. Do you know that it is possible to weigh the head without cutting it off? Do you think it is possible to weigh one of your hands while it is still attached to your body? You probably never thought of it or else considered it impossible if you did. But any physician can do it. If he follows the method described today by Dr. C. D. Spivak of Denver in a paper at San Francisco, Doctor Spivak described the apparatus which he has contrived by which it is possible to weigh different parts of the living human body. By means of a pair of scales with sliding weights made like a seesaw and by the aid of complicated mathematical formulae, the separate weight of any part of the body can be determined.

Fusible Tin Boiler Plugs.

The investigation of fusible tin boiler plugs has been completed at the bureau of standards and presented for publication. It is believed that there can now be no excuse for boiler explosions from imperfect plugs if the bureau findings are followed, namely, to use tin to 99.9 per cent purity and free from zinc, a requirement easily met, but which has not been the actual practice in many cases.

Motor Ships in Sweden.

A Danish shipbuilding yard at Copenhagen has just launched the seventh and last motor ship for the Rerieraktiebolalet Nordstjernan of Stockholm. This ship is similar to the others built and has 6,600 tons dead weight. As this boat will run to the west coast of the United States through the Panama canal, it has been named San Francisco.

Value of Forethought.

"I dare say there is such a thing as 'fortifying oneself' in advance for disappointment."
 "It can be done. When Jagsby goes fishing the first thing he does after dropping his line in the water is to take a long pull at his flask. After that he doesn't care whether the fish bite or not."

GAME OF LIFE WAS CALLED

On Account of Darkness After Tragic Accident to Enthusiastic Baseball Fan.

W. H. Murphy, a salesman, living at the Minneveska apartments, was on his way to the ball game, reports the Los Angeles Times. He tried to board a moving train, grasped the handrail and tried to lift himself to the steps. His grasp was not firm, and his palms were moist with running, and as he began to elevate himself his hands slipped.

A lurch, a swing and a sudden shift, and his body was thrown to the rails. His legs were caught beneath the wheels and the train passed over them, amputating both above the ankles.

He was taken to the Receiving hospital for treatment, where Surgeon Wiley and Assistant Surgeons Roome and Johnson dressed the limbs, an operation demanding further amputation. As he went to the operating table to receive the ether he was smiling and cheerily talked with the nurses.

"No more ball games for me for a while," he remarked.

The attentions of the surgeons stopped further speech, while the ether was administered, and afterward, when he had been wheeled from the spotless surgery to the ward, he began to talk again. He was at the ball game.

"Well, he'll get a hit now. The time has come; he's going to get a hit now."

"Oh, hum, it's rather a slow game today. What's the matter with those boys that they're moving so slow? They ought to hurry. Can't they see it's getting dark? It's certainly getting dark fast. You can hardly see the outfielders there—not in right field, anyhow. I guess they'll have to stop soon, won't they? The sun's all gone down. My, but it went fast."

"And see how dark it's getting—why—why—"

"I guess they'll have to call—the game."

And the surgeons drew the sheet far over his head and notified the undertakers.

New Record by Fisheries Bureau.

The commissioner of fisheries, under date of June 10, advises that not only will the output of the fish-cultural operations of the bureau of fisheries during the fiscal year ending June 30 surpass previous records but for the first time in many years there has been a sufficient supply of black bass to meet all current demands for both public and private waters. All outstanding applications for black bass will be filled. Some of these have been held over for several years for lack of a sufficient supply of the fish. Among recent deliveries of this fish have been 10,000 to a large artificial lake at Austin, Tex., formed by the damming of the Colorado river, and at the station whence the fish came a large supply is now on hand. It is the policy of the bureau to distribute each year an increasingly large proportion of fish which have been retained at the hatcheries until they reach the fingerling or yearling stages, which means that the output, being more mature, is better able to care for itself and is not so subject to the depredations of natural enemies.

Hydroplane a Freak.

The hydroplane of the day is a freak in every sense of the word. The various types of underbody construction are designed to give the boats lifting power, to lessen the draft under speed, and, consequently, the displacement—in other and plainer words, to lessen the amount of water that has to be pushed aside in the endeavor to make high speed. The hydroplane is the outcome of years of study by the best naval architects and marine engineers in freak-boat construction. Thousands of dollars are spent annually on these freaks, but many are thrown on the junk pile and the effort repeated. All of these boats are overpowered, as one would consider the needs of an ordinary boat. But extra power is added to gain a little extra speed. Thus one of the Atlantic coast owners is this year duplicating his power by adding a second motor to a 45-horsepower with the hope of adding an extra ten miles an hour to the speed. This may be termed freakishness, yet in the quest for the 60-mile all sorts of freakish things are being undertaken.

Auto Wins in Train Race.

After a mad race, covering 18 miles, between an express train on the Laurel line and a high-powered automobile, which had been requisitioned by Chief of Police Roberts of Wilkes-Barre, the latter captured a man accused of kidnaping a Wilkes-Barre man as he stepped from a train in Scranton, Pa. The fugitive got away with a ten-minute start, but the big racing car cut down the running time, and the officers were waiting at the station here for their man, who was taken back to Wilkes-Barre.

The running time of the train was 35 minutes, and the automobile traveled a little more than a mile a minute to overhaul it.—Scranton Dispatch to Philadelphia Record.

Height of Absurdity.

"Look at those two chumps having a heated argument about the merits and demerits of an automobile."
 "Do you mean the two men examining a car across the street?"
 "Yes."
 "Umph! To make matters worse, neither one owns the car they are wrangling about."

\$10,000 FOR PAGE AD.

The Curtis Publishing Co. announces new rates for the Ladies' Home Journal one of \$8 per line or \$6,000 for a full inside page, \$7,000 for the second or third cover in two colors, and \$8,000 for the third cover in three or four colors, \$10,000 for the fourth cover in four colors. For the Saturday Evening Post a rate of \$8 per line is announced, one of \$5,000 for a full page, \$6,000 for the second or third cover page in two colors, \$7,500 for the fourth cover page in two colors, and \$10,000 for center double page in black, \$12,000 for center double page in two colors.

CORN FOR SILO.

Corn makes the best ensilage when nearly ripe, though it can be put in the silo at any stage. The nearer ripe the corn is the greater amount of food value secured per acre. The crop increases in weight per acre quite rapidly after it reaches the tasseling stage. The season has kept corn back this year. Leave it as long as possible before putting it into the silo. It will not hurt the corn for silage even if it freezes, provided it is then put in the silo right away.
