Moist Warm Air Heater

Warms the entire house by circulation. The air is changed in every room every thirty minutes.

Moist, warm air at 65 is as warm as dry air at 70 to 75. It cost 25 per cent as much to heat a house from 65 to 70 as it does to heat it up to 65. Consequently you save 25 per cent of your fuel bill, besides the risk of taking cold is reduced more than one half. The air moistener is made automatic insuring a constant supply of water in the moisture pan.

The dust collectors gather the dust and dis-

ease germs, preventing them from circulating in the air. Cold basements are assured by the proper insulation of the casing.

The Moist Warm Heater can be installed in an old or new house, store building or school by a handy man and helper in six hours.
