BUILD WARM

The double dead-air space
keeps warmth in and cold out

If you're going to build a new house, build one that's warm in winter, cool in summer. To make this easy for you, we offer home builders everywhere, without royalty, H.-L.-F. stud and wall board construction (patent applied for) illustrated above.

Dead-air is the best non-conductor of heat. This new construction provides two dead-air spaces between your warm rooms, and twenty below zero weather outside. Your house is just twice as warm as a house built the ordinary way.

H.-L.-F. stud and wall board costs 25% to 50% less than back plaster

Here's a chance to have a warm house at small extra cost. H.-L.-F. stud and wall board construction costs 25% to 50% less than back plaster, and it's a lot better. Back plastering simply makes the outer wall warm. H.-L.-F. construction makes your house twice as warm by providing two dead-air blankets to keep out cold. H.-L.-F. stud and wall board construction is easy to use. Studs are accurately milled to take the wall board and wall board is especially made, exact size required. Slip it into place, raise your wall, and there you are. No fuss, no muss, no delay—and, best of all, absolute insurance against cold. Get a price on this construction for the house you are planning.

No advance in lumber prices—send list quick for prices

Double quick shipments from big stocks

Until further notice, lumber prices which resulted in four times as much business this year as last year for Hewitt-Lea-Funk, will continue. No telling what the war will do to prices later on.
