

FROM ONE YEAR'S CROP HE PAID FOR HIS LAND IN WESTERN CANADA

Remarkable as are the reports of the yields of wheat in Western Canada, the marketing of which is now under way, they are none the more interesting than are those that are vouchered for as to the value of this grain crop to the farmers of that country.

Some months ago the Department of the Interior, at Ottawa, Canada, wrote to those in the United States who were owners of land in Western Canada that was not producing, advising that it be put under crop. The high prices of grain and their probable continuance for some years should be taken advantage of. Cattle and all the produce of the farm commanded good figures, and the opportunity to feed the world was great, while the profits were simply alarming. The Department suggested that money could be made out of these idle lands, lands that could produce anywhere from 25 to 65 bushels of wheat per acre. A number took advantage of the suggestion. One of these was an Illinois farmer. He owned a large quantity of land near Culross, Manitoba. He decided to put one thousand acres of it under wheat. His own story, written to Mr. C. J. Broughton, Canadian Government Agent at Chicago, is interesting.

"I had 1,000 acres in wheat near Culross, Manitoba. I threshed 34,000 bushels, being an average of 34 bushels to the acre. Last Spring I sold my foreman, Mr. F. L. Hill, 240 acres of land for \$9,000, or \$37.50 per acre. He had saved up about \$1,000, which he could buy seed with, and have the land harrowed, drilled and harvested, and put in stook or shock.

"As a first payment I was to take all the crops raised. When he threshed he had 8,300 bushels of wheat, which is worth in all \$1.00 per bushel, thereby paying for all the land that was in wheat and more, too, there being only 200 acres in crop. If the 240 acres had all been in wheat he could have paid for it all and had money left."

That is a story that will need no corroboration in this year when, no matter which way you turn, you learn of farmers who had even higher yields than these.

G. E. Davidson of Manitou, Manitoba, had 36 acres of breaking and 14 acres older land. He got 2,186 bushels of wheat, over 43 bushels per acre.

Walter Tukner of Darlingford, Manitoba, had 3,514 bushels of a 60 acre field, or over 58 1/2 bushels per acre. Forty acres was breaking and 20 acres summer fallow.

Wm. Sharp, formerly Member of Parliament for Lisgar, Manitoba, had 60 acres of wheat on his farm near Manitou, Manitoba, that went 53 bushels per acre.

One of the most remarkable yields in this old settled portion of Manitoba was that of P. Scharf of Manitou, who threshed from 15 acres the phenomenal yield of 73 bushels per acre.

These reports are but from one district, and when it is known that from almost any district in a grain belt of 30,000 square miles, yields while not as large generally as these quoted, but in many cases as good, is it any wonder that Canada is holding its head high in the air in its conquering career as the high wheat yielder of the continent? When it is pointed out that there are millions of acres of the same quality of land that has produced these yields, yet unbroken, and may be had for filing upon them as a homestead, or in some cases may be purchased at from \$12 to \$30 an acre from railway companies or private land companies, it is felt that the opportunity to take part in this marvelous production should be taken advantage of by those living on land much higher in price, and yielding infinitely less.—Advertisement.
