

MONDAY

You Will Find Us Located In Our New Home
Rooms 1 and 2 City National Bank Bldg.

Instead of 224 Mesa avenue, where we have been located for many months. Our new location is more desirable, very convenient and we know that our patrons and friends will find us better prepared to serve them. The new location is the most centrally located building in the city, has every modern convenience, and we trust that you will call on us soon.

Policy of This Company

It is with pride and pleasure we again tell you of the policy of this company and we are confident that there are hundreds of our patrons who will testify that "Hatton never attempts to sell a piece of property that he would not buy himself; that when Hatton represents a farm to have such and such good features and such and such bad ones that you will invariably find it just as Hatton says; that Hatton always gives the other fellow a chance to make a dollar, as well as for himself." Misrepresenting property is something that this company has never practiced and WHEN WE ARE FORCED TO DO IT, THEN WE WILL RETIRE FROM BUSINESS.

We always try to make a reasonable commission—we or any other real estate dealer is entitled to it—but when we get a good, genuine snap it is sold at the same profit of percent, and we give the general public the same opportunity to buy. For this reason we have sold more upper valley farms than any two dealers in the southwest and by a continuance of this policy we hope to do the same amount of business in the future.

Our Plans For the Future

As a matter of fact, our plans for the future are the same as our policy of the past—to give better values in property than any other firm in the southwest; to sell twice as much as any company or individual in Texas, Arizona or New Mexico. We will devote more attention to El Paso property, both improved and unimproved, than heretofore, but at the same time devoting as much attention to upper and lower valley farms. To do this it was necessary to secure additional help, which has been done, and the new salesmen will sell property only under the "Hatton policy," which is so well known over the southwest and which has been so favorably received as demonstrated by the amount of business we have done during the past year.

If you have anything to sell and want to dispose of it quick, you should list it with us because it will be properly advertised, besides, there are a large number of people who depend upon our judgment for investment.

If you want to buy property, call and see our list—the largest in the southwest—and you will find what you want at the terms you are prepared to meet.

We will sell you a small tract of land on six years' time that will pay for itself with one crop.

Some Interesting Real Estate Bargains

3 cottages in Franklin Heights, frame bldgs., with stone foundations. For sale on easy terms. These are houses which have been renting constantly.

Four room red brick house and six lots at a bargain, on long and easy terms, located in East El Paso; \$3600; easy terms.

Seven room red brick house in Mundy Heights; beautiful location; easy terms. See us about this.

Two nice corner lots in Government Hill, within two blocks of two car lines. Price \$450 for the two. Will take vendor's lien notes in trade.

Four room frame house in East El Paso on two full lots. A bargain. Let us quote you price and terms on this property.

Eight room house on Montana street; absolutely modern in every respect; barn and buggy house; well plumbed and lighted. The terms are easy and the price is right on this property.

4 room house on Boulevard; red brick; front and back porches; long and easy terms.

We have many other attractive bargains in city property which we would be pleased to tell you about.

30 acres, one mile from Ysleta and one mile from J. J. Smith, farm; has 14 acres in alfalfa, rest in garden truck; good pumping plant; chicken house; and owner will give implements and horses in selling place. Price \$7500. Terms easy.

UPPER VALLEY BARGAIN

18 miles from El Paso. 48 acres all planted to wheat, perfect titles, no better soil in the valley, three miles from railway station and new macadam road. Price \$85 per acre, with terms. The crop is worth half the price.

We have a fine piece of city property to trade for valley land.

17 acres, one mile from Ysleta on county road. A bargain. Ask Hardesty, with Hatton Realty Co.

We have five and 10 acre tracts, one mile from Las Cruces, which we sell on six years' time. One onion crop will pay for the land. See Hardesty, with Hatton Realty Co.

Note: 40 acres of alfalfa will fatten 900 head of hogs. With meat at the price it is, figure the profits.

The Outlook For 1910

Never were the prospects more favorable for an unusually successful year than 1910. During the past several months El Paso, the upper and lower valleys have constantly been in the limelight. It is a safe statement that there has been more visitors in El Paso during the past few months than in any previous year. You know what this means. Could a visitor come to El Paso without being favorably impressed at the remarkable progress El Paso and the upper and lower valleys are making? Without realizing that this is the country where a man can live contented, happily and prosperously? Where crops can be raised the year around? Without being favorably impressed with the almost perfect climatic conditions? El Paso claims many attractive features that no other city in the west can, and moreover, it has proved every claim that has been made for her. There are hundreds of reasons why El Paso and the two valleys are going to make remarkable strides during the present year. If you are considering making a change, come to El Paso. We need you, you need us, and it will pay you to come here and investigate what is in store for you.

Regarding City Property

During the past year El Paso has made remarkably substantial growth. We who have seen several costly business blocks erected, many beautiful homes built and scores upon scores of cosy cottages completed, are so accustomed to the building that it never appealed to us. There is scarcely now a vacant piece of good business or classier residence property in El Paso. It is safe to predict that wisely today will be independent for the remainder of his or her life. It does not require "old timers" to tell us when fortunes were made in a few years on El Paso property. You need not be surprised if the same thing occurs again. El Paso is rapidly growing every day. It will continue to grow every day. Its future is unlimited. Its resources are undeveloped. Its transportation facilities are improving. Its progress is just beginning to attract attention. Its merits as a winter resort is just becoming known. These are only a few of the things that are going to make El Paso a city of 100,000 population in less than ten years. You know what that means if you invest in El Paso property. Don't wait too long, make a selection soon and you'll never regret the investment.

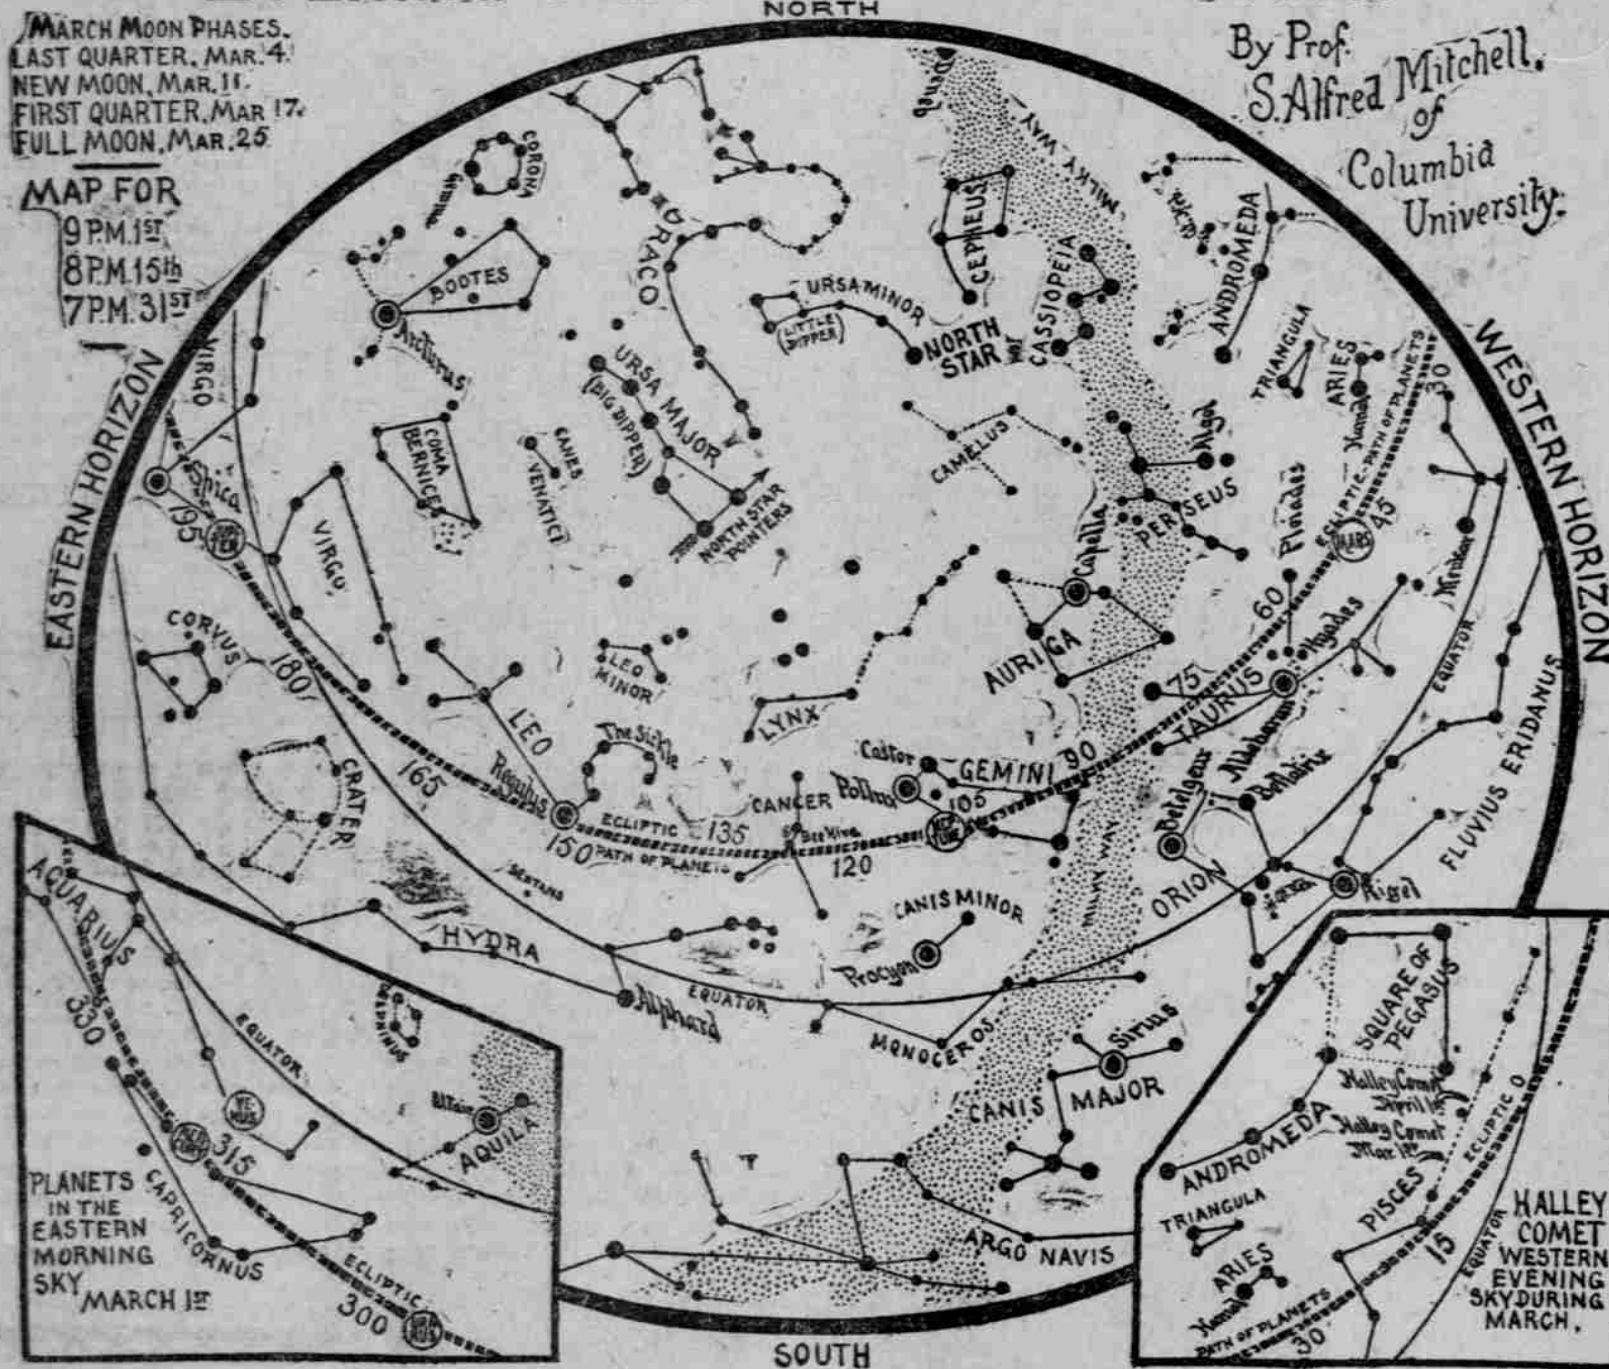

An upper valley investment is as safe as investing in Government Bonds. Call and ask for our list.

EVENING SKY MAP FOR MARCH

SELDOM has the astronomical world been so completely taken by surprise as it was by the brilliant naked eye comet that each and every one of us saw. A month ago the professional astronomer was beginning to devote his energies more and more to Halley's comet, for nothing else of unusual nature loomed big in the astronomical horizon for the year 1910. This interesting periodic comet, discovered as it was by Prof. Wolf 229 days before perihelion passage has been brightening gradually, but so slowly that the "man in the street" had begun to lose interest in it, for it was not merely a "nine days' wonder." The new comet, or as it is technically known, Comet A. 1910, apparently caught the comet seekers napping, and as a result these guardians of the celestial sphere have lost somewhat of their excellent reputation for carefully and sleeplessly patrolling the heavens, looking for these

stray visitors from outer space which come in to disturb the quiet and equanimity of our peaceful lives. Comets have always been looked upon with fear and dread even as far back as Homer, who in the Iliad speaks of "the red star that from his flaming hair striketh down diseases, pestilence and war."

Comets With Bad Reputations.

On account of their bad reputations, and their unusual appearances, astronomers have been most assiduous in searching for them, and it is a matter of no little chagrin that the citadel has been approached and stormed by the enemy without having been seen by the sentries. Comet A. 1910, was discovered on Jan. 17 by Innes at Johannesburg, South Africa. At the time it was only 2 degrees west and 4 degrees south of the sun, and it was bright enough to be seen even after sunrise. As it was then almost at perihelion, it changed its position in the heavens rapidly

and quickly increased in brilliancy, and in a few days rivaled in brightness the evening star, Venus. Continued cloudy weather throughout the United States deterred us from seeing it for nearly a week, but what a splendid object it was when we did see it. Even in the city where we had the dust and smoke, the glare of the city lights and the lack of horizon to contend with it showed up beautifully. For the benefit of amateurs who think they possess keen eyes, a few measurements of the length of the tail are given. On Sunday, Jan. 23, the tail was 10 degrees in length (two may remind those who have forgotten it that the distance between the "pointers" of the Dipper is about 5 degrees). The tail increased greatly in length, and by the end of January had reached the enormous length of 35 degrees, as measured by Prof. Douglass, of the university of Arizona, over one-third the distance from horizon to zenith. It quickly faded

after that and on Feb. 2, when it was practically invisible in New York city, due to smoke and lights. Prof. Barnard estimated its length at 20 degrees. The tail was then very broad, widening out rapidly from the head, and an excellent photograph of it obtained the same night showed, in addition to the main tail, another much shorter tail, or extension, pointing in the opposite direction and extending 12 minutes of arc towards the sun. The last time this phenomenon was noted was in the great comet of 1882; and the great comet of 1910 is the most brilliant comet we have had in all that time.

Remarkable Comet.

It likewise is the most remarkable comet in that period, judging from its spectacular appearance, the length and brilliancy of its tail, and its curious composition, for the spectroscopic shows in addition to the cyanogen band found in all comets the bright lines in the yellow part of the spec-

trum due to luminous sodium vapor. This constituent of common salt is very seldom seen in a comet, and we recall it in the Wells comet and the great comet of 1882. It is probable that the closeness of the comet's approach to the sun caused the appearance of the sodium lines. As a result, it shows with a yellowish light. Comet A. 1910, was but 4,000,000 miles from the sun when nearest it, and it moved at the rate of 1,000,000 miles per hour.

Nature of the Force.

But what is the nature of this force? This problem was solved by Abraham, the Swedish scientist. As far back as 1873, the celebrated Clark Maxwell published the electromagnetic theory of light which today is regarded as our most acceptable theory. According to it we know that light is a wave motion, and just as the waves of the sea pound in on the shore with a tremendous force, so the tiny waves of light must exert a pressure on every body on which they fall. This pressure on bodies of ordinary size, due to the sun's light, is exceedingly small compared with their weight. The pressure on a body depends on the area which is exposed, the weight of a body on the volume or cubical contents. If we decrease a particle's size, its weight decreases as the cube of the diameter, the pressure as the square, and hence its weight decreases faster than the pressure; and if the particle is near the sun, and if it is sufficiently decreased in size, the pressure of the sun's light driving it away may equal the attraction of gravity centered in the sun and pulling it toward it. Is this only a theory? How large are the particles, or rather how small must they be before the pressure of sunlight will equal the attraction of gravity? The particles, of course, are small, but they are not inconceivably small, and are of dimensions well known to physicists. But there are physical foundations for this interesting theory? Yes, there is, for Prof. Nichols and Hall have been able to measure in the laboratory the pressure of sunlight and they have more-over produced a comet's tail artificially from these ideas.

Notions About Comet Tails.

Thus, then, we have the following notions concerning the tails of comets: The matter in them must be in a very finely divided state, little flocks of dust or gaseous molecules, the sun rays exert on this fine matter a pressure which is greater than gravity, and as a result the tail is directed away from the sun. As a consequence, this tail does not move along bodily with the comet, but new matter is continually being driven off from the comet's head and the tail is a new tail always. The comet therefore is slowly being used up by its own

emanations, and the slowness of this process is evident if we consider Halley's comet, of which we have records for 2000 years, and it has been consuming itself all this time, but yet is not wasted away. Truly, the more we learn of comets the more we marvel at their wonders. But we need not be much afraid of the cyanogen in the comet's tail penetrating into the earth's atmosphere and bringing disease and death with its poisonous vapors.

As has been told before, Halley's comet passes on the far side of the sun on March 26, and thereafter will be a morning object. As it will set soon after the sun in the early part of March a short ephemeris only is added: Date 1910, Right Ascension, Declination.

March 5 0 30 28 7 56 2
 March 10 0 33 34 7 54 28
 March 15 0 37 35 7 58 3
 March 20 0 41 36 8 0 15
 On Feb. 19, Prof. Barnard measured the head of Halley's comet to be 190,000 miles in diameter, and the tail 5,000,000 miles long. In a five inch guiding telescope no trace of a tail could be seen, but on a photograph a tail 1 degree in length appeared. Between this date and May 18 the tail will undoubtedly develop in length and though we will be 14,000,000 miles from the comet when it passes between us and the sun the tail will undoubtedly sweep by the earth. The comet has not yet been seen by the naked eye, and we will probably have to wait until April 'till after it comes out from the rays of the sun. The stray comet we have seen with the naked eye has whetted our curiosity to behold Halley's.

The Planets.

Venus passed between the earth and the sun on Feb. 11, and is now a morning star, rising before the sun. On March 13, it attains its greatest brilliancy. Mars is gradually getting fainter, and may be seen towards the southwest in the early evening. About March 10 it will be directly south of the Pleiades. On the first of the month Jupiter rises shortly after 8 o'clock. It is at opposition March 18, and so is on the meridian due south on that date at midnight. It is then nearest the earth and consequently brightest. It will therefore be a magnificent object all this month. Saturn is seen low down towards the southwest in the early evening.

Spring begins March 21, at 7:02 a. m., eastern standard time.

MAN FINDS ROBBER IN HIS BEDROOM

Goes for Gun and Robber Gets Away—Broken Leg Wrenched.

Between 3 and 4 o'clock this morning a burglar entered the home of L. W. Waddell at 317 South Ochoa street, but was frightened away before he could secure anything.

Steve Le Gros, Waddell's stepson, who sleeps in the front room, felt the man's hands on his face and felt him trying to reach under his pillow. He arose and went to the back room, asking his father for the gun. The latter secured it, but when he returned the burglar had flown, having placed the piano stool on the window sill to raise the screen.

Le Gros has been laid up with a broken ankle and wrenched it severely when he jumped out of bed.

SUNDAY'S ENTRIES

JUAREZ JOCKEY CLUB.

First Day, Sunday, Feb. 27.

First race, selling, five and a half furlongs—Ina Johnson 94, Henry Bolton 96, Genova 97, Odd Rose 97, Cesarillas 100, Father Eugene 104, Nila 105, Bob Lynch 105, Maltine 105, Alarmed 105, Rio Pecos 110.

Second race, selling, six furlongs—Hattie Garrett 94, Anne McGee 97, Shirley Rose 99, Howard Pearson 99, Lista 101, Ethel Day 103, Silver Stocking 103, Rubiola 105, Gladys Louise 105, Galves 105, Vohome 106, Light House 107.

Third race, purse, 2-year-olds, three and one half furlongs—Iwaini 105, Ballela 108, Uncle Ben 112, Flying Wolf 115, Frank Mullens 120.

Fourth race, the Juarez Derby, \$500 value, one mile and a quarter—Cuzzo 105, C. W. Keaton 114, Jim Brady 114, man Silver 114, The Wolf 117, Charles Hargrave may be an added starter.

Fifth race, handicap, seven furlongs—Luke Cates 95, Ocean Queen 97, Light Knight 102, Bear Man 100, Meddling Hannah 103, Meadows 112.

Sixth race, selling, one mile—Minnowette 97, George Guyton 99, Miss Vigilant 102, Sensible 103, Garrymader 104, J. J. In 104, Alma Boy 107, Gibson 107, Lotus Ester 110, Sam Taylor 112.

*Five pounds apprentice allowance.

**Bard & Farrar entry.

TRY DR. CURE THE HOK'S VEGETABLE COMPOUND.

MEDICINES for hereditary debility or weakness of men, women and children.

Chronic Blood Poison, Eruptions all Skin Diseases.

Rheumatism, Catarrh, Heart Disease, Lung Trouble, Liver Complaint and Constipation.

Female internal trouble, inflammation or acute pains INSTANTLY CURED.

See 105 N. Campbell. Bell Phone 2910.

Do not miss more effective to breathe than a remedy for diseases of the breathing organs than to take the remedy into the stomach.

Cresolene comes because the air, rendered strongly antiseptic, is carried over the diseased surface with every breath, giving prolonged and constant treatment. It is available to mothers with small children.

For treated throat there is nothing better than Cresolene Antiseptic Throat Tablets.
