

# THE SAFEST, SUREST AND MOST DEPENDABLE TREATMENT FOR MEN

Thousands of men are longing to attain health and strength, but are being held back by their skepticism as a result of wasted time and money with those who treat but seldom cure. Banish all doubts and avail yourself of the services of specialists of recognized ability, whose deep knowledge, expert skill and extended experience commend them and their work. We have made a life-long study of the diseases and weaknesses that constitute our specialty, reinforced by an immense practice. All that expert skill, vast experience and scientific attainments can accomplish are now being done for those who come to us for the help they need.

Come to our office and we will make a thorough, searching and scientific examination of your ailments free of charge, an examination that will disclose your true physical condition, without a knowledge of which you are groping in the dark, and without a thorough understanding of which no physician or specialist should treat you.

## VITAL POWER RESTORED

There is not a man in existence who is suffering from weakness, if decline is from unnatural causes, that we cannot rebuild and strengthen so as to accomplish the greatest desire, and after we have cured a case of this kind there will never again be a sign of weakness except brought on by imprudence.

Our cure is a thorough and scientific course of treatment which acts at once upon the nerve forces, stopping the drain and replacing the worn-out and run-down tissues. It increases the weight in sound, healthy flesh and muscle, that give strength and fill the brain and nerves with fresh vitality, building up the entire system and transforming the sufferer into a type of perfect manhood.

## BLOOD POISON

Blood poison manifests itself by stages known as primary, secondary and tertiary. Any form of this destructive disease makes itself known by such evidences as ulcers of the mucous membranes in the mouth and throat, sores on the body, itching of the bones, falling of the hair, spots and all discolorations of the skin, which signify decay and premature death.

Our treatment for blood poison consists of a predigested nucleic preparation that completely reorganizes the blood corpuscles, by which means every particle of poisonous matter is eliminated. Under our system of treatment the stomach does not become affected and it is utterly impossible for the poison to remain in the blood, and purity and health are the results in every case. All manifestations of the disease disappear soon after beginning treatment, and a normal state of health is resumed.

## STRICTURE.

Stricture as applied to the urethra, is a fibrous deposit or scar tissue formation around the CANAL, caused either by an injury or a severe inflammation, no matter what the nature of this inflammation. The immediate results of the stricture are first an obstruction to the flow of urine, distension of the bladder, which produces wasting, followed by overflow or constant dribbling and ultimately the kidneys become involved and Bright's disease results.

Our treatment consists of neither cutting or sounding, but we dissolve the stricture by cataphoresis, treatment is painless and the cure is permanent, and when we dismise a case the canal is sound and healthy and perfectly natured.

## VARICOCELE.

Varicocele in the beginning is simply a passive congestion of the venous system in the parts. If this is untreated, later the venous walls give way, become knotted and remain distended, with the resulting circulatory disturbance the organs supplied by these blood vessels atrophy or waste because of the malnutrition. The results to those who have it are too well known to require an explanation.

Our treatment consists of two different and distinct procedures, one requires the presence of the patient and the cure is effected in 24 hours; the other treatment, while slower, is just as efficient and can be carried out by the patient in the privacy of the home.

## KIDNEY COMPLAINTS.

Kidney complaints often caused by excesses, alcoholic liquors and severe sickness of various kinds. The usual symptoms are highly colored urine and strong odor, chilliness, feverishness and a feeling of lassitude, puffiness under the eyes and swelling about the ankles. Our long study and extensive practice in treating kidney diseases insure success in all cases not past the curative stage. We determine the exact condition by a thorough analysis of the urine, and we have cured so many kidney troubles, given up by other doctors, that we have great confidence in our method of treatment.

Hours: 9 a. m. to 6 p. m.

Sunday: 9-1.

## INTERNATIONAL SPECIALISTS

Rooms 1-3 Hammett Bldg., Cor. Mesa Ave. and Texas St., EL PASO, TEXAS

## ALL WOMEN

Suffering with any ordinary Pelvic trouble should consult us before submitting to a mutilating surgical operation. We have cured hundreds of women who have been told by eminent surgeons that their only hope of relief was to have an operation done necessitating a removal of some of the vital organs. Our treatments are painless and CURES PERMANENT.

## OUR CHARGES.

Are reasonable, and payments are arranged to suit the patient. We make only one charge and all medicines and appliances are included, so that you know when you begin treatment just what it is going to cost you.

## OUR EQUIPMENT.

Is as good as the best. We are prepared to give all the treatments named above and this necessarily makes our treatment far superior to the old time method of drugging every patient for every malady, regardless of its nature. We realize, and the intelligent class of people are fast becoming acquainted with the fact that a doctor with a lead pencil, prescription blank and a few chairs and a desk in his office, is not up to date and is not able to cope with diseases which he is asked to treat.

## OUR CURES

ARE PERMANENT AND NO DETENTION FROM BUSINESS IS NECESSARY WHILE UNDER OUR CARE. The fact that we accept your case for treatment is a guarantee of a cure, AS WE NEVER HOLD OUT FALSE HOPES TO INCURABLES, and never commit ourselves until we are positive that we can cure you, after first making a thorough MICROSCOPICAL and X-RAY EXAMINATION if we find it necessary to ascertain your exact condition, then remove the cause.

## A GUARANTEE

Or the assertion that we GUARANTEE A CURE is absolutely worthless if it is not backed up by ABILITY and FINANCIAL responsibility. WE INVITE THE CLOSEST INVESTIGATION OF OUR METHODS AND OUR STANDING. REFERENCES and testimonials of hundreds of cures will be furnished you upon request. OUR NEW ELECTRO VACUUM APPARATUS IS A MARVEL. Corrects all errors of development. Write for information concerning it.

**SPECIAL NOTICE**—All out of town people who have written us concerning treatment should take advantage of the reduced railroad rates during the Fair, October 29th to November 6th, and call for a personal examination FREE.

## FREE BOOKS

Diseases of Men.  
Chronic Diseases

Diseases of Women  
Skin, Kidney, Rectal,  
Bladder Diseases.

Either one of the above books will be sent free in a plain sealed envelope to any address if this paper is mentioned.

WRITE if unable to visit the office. While not all cases are amenable to our Home Treatment, and we insist upon a personal examination, still we do cure many cases of a simple nature without this examination. A letter explaining your symptoms will find out whether we can treat you at home or not. ALL CORRESPONDENCE IS STRICTLY CONFIDENTIAL. CONSULTATION AND A THOROUGH X-RAY EXAMINATION AND OUR OPINION AND ADVICE IS FREE.

## PROBABILITY OF GOOD OIL BEING FOUND NEAR MARATHON, BREWSTER COUNTY

**Geologic Report Shows Best Indications of the Existence of Oil Shales in Land Which May Be Prospected. This May Become One of the Best Oil Fields in the Whole Southwest.**

Los Angeles, Cal., Oct. 25.—With the district around Tule, already a proved field of oil, interest is now centered in sections adjacent to those lands.

Marathon, in Brewster county, has been looked upon as a possible oil field and the following report, which will prove interesting to those who have considered it such, discloses the probability of good oil being found there.

The land covered in the report is known as block 1 and block 4, covering several sections of these two blocks.

**Prospects for Oil.**  
Owing to the formations being exposed as they are in this basin, it is not a question as to whether oil exists, it is only the question as to where to drill to tap the great basins that are sure to exist under part of this basin. There is every evidence to prove that oil is there; as to the amount of oil that may be developed, only the drill will prove. Personally, I have great hopes for the future of this field.

The anticline of the underlying formation, which enters near the north line of section (42), bears a little west in its passing, almost down the division line between sections (7) and (42).

As to the depth at which oil may be encountered, will say that you may expect oil in upper shales in small amounts, but it is not probable that oil in paying quantities will be encountered until the 1200 foot level is reached.

Strong gas pressure may be met near the 1000 foot mark. Strong sulphur water will be encountered between 700 and 1000 foot levels. Great care should be taken to see that everything is in readiness to shut off this water when encountered, for it will be met in several parts of the basin. After passing this water there will be no other water to speak of till near the 300 foot level, which is probably deeper than you will have to go.

**Kind of Oil.**  
The oil found in the upper or shallow wells of your basin proves to be 28 gravity; I fully believe the oil to be found in the lower strata will be of higher gravity yet. As it is, the oil found near the surface is of a better grade than the average oils of the state. Some of the cropping shales point to a very high grade of oil, in fact, there are here croppings of some of the most highly charged petroleum shales that I have ever met in any field.

I have ascertained that the Southern Pacific will take all fuel oils developed in this district, owing to the long hauls they are required to make to secure oil at the present time. Located so near a railroad and with prospects of another railroad which have their survey almost to the land, you should be able to market your oil at good figures with the least expense.

**Gas Exists Here.**  
Gas will be found in this field, with great pressure, and will probably be

the cause of a flowing well. There are very few places in the United States where the oil is so evenly distributed throughout the basin as in this. A well would be a paying proposition in itself with the towns of Marathon and Alpine for consumers, besides cheap fuel for irrigating purposes.

Practically no paleontologic or geologic data concerning the sections here mentioned is here available. There have been several geologists visiting the field in the interest of corporations, but their findings have not been made public. It is well to mention that my findings place this district, or the basin portion of it, which we find enclosed by the hills on all sides, as of a different age, or as being older than the surrounding hills, especially those to the north or west.

**Deposits in Mountain.**

The small mountain that lies to the northeast of these sections is older than any other rock found in the district, as it belongs to the archaic era, of the archaic age, and is granite, showing no traces of life. There have been deposited in the basin proper a light covering of the upper cretaceous period. This has been eroded away so that at present there exists in no place over nine feet of this rock. Underlying this upper cretaceous, the lower cretaceous, known in Texas as the Comanche series, is missing; thus showing that what is now the basin was, during the lower cretaceous period, high and dry, while the surrounding hills were low and the Comanche series was there deposited.

The hills that now exist, surrounding the basin, were not forced up in the position in which we now find them, but were forced from the north, rising and overlapping the underlying formations, and to a certain extent caused the breaking of the upper strata of the basin as we find them today. This breakage has in some places exposed the underlying formations to a depth of 1200 feet, exposing the oil shales and sands that exist.

The first 200 feet of the basin show signs of belonging to the carboniferous era. Near the foothills surrounding the basin, in places, are found evidence of the Jurassic period, such as the cephalopods, ammonites, hildocerat bifrons, almatheus margaritatus.

The basin proper belongs to the sub-carboniferous period.

**Location and Topography.**  
The region, or sections referred to in this report as block (1) sections (7) and (8) and sections 42, 44, 45, 46, 53, 54 and 57, block (4) are situated in Brewster county, Texas, three and one-half miles northwest of Marathon, Texas, which is credited with a population of 600.

At the point mentioned 3 1/4 miles from Marathon, the land extends west four miles and north four miles, thus forming an angle in which two sections are added to the north of the second section, and to the west nine sections compose the land to be covered by this report, the nine sections representing 5765 acres, as five acres are held under separate lease near the center of section 42, block 4. The southwest corner of section No. 8 extends to within a few rods of Lenox, a station on the G. H. & S. A. railroad. The north line of section 57 enters the hills forming the imaginary rim of the basin, which extends much further to the north, underlying these hills.

It is in these hills that the anticline of the older formations is best studied. It is here that we see where the later formations have been laid down on the anticlines of the older formations without showing in any way from their surface the existence of such anticlines.

**The Marathon Basin.**  
The nine sections here taken contain much level land, chiefly in small valleys extending north and south between hills that have an average elevation of 40 feet above the level land. Near the foothills the elevation is 425 feet, while to the south side of the land here described, the average elevation is 4500 feet.

The basin represented as the Marathon basin, if taken with its extensions, is a very large territory; taking it, as it is generally spoken of in that district, it extends to the east of Marathon two miles; to the west it extends to the hills, about 12 miles; to the south it extends, brokenly, for nine miles; to the north it extends under the hills six miles from Marathon. Like

most other fields, the best prospects for oil are to be found in the anticlines, which do not cover the entire basin.

**Geologic Formation.**

As described, the sections under this report lie wholly within the basin, there are exposed to the surface all of the underlying formations to the depths of 1200 feet. Chiefly sandstone and shales underlying the limes.

The shales, grading from a light gray to a jet black where they join the sandstone at about 1000 feet depth; here we find a stratum of shale and a stratum of sand; the sand strata varying from three to 60 feet, while the shale is much thicker; the sands found near the surface are fine and soft, while those deeper are coarse gravel.

The limes in some places are composed entirely of shells from which fine specimens can be secured. The shales, especially those from the lower depths, are highly charged with petroleum.

Evidence of the great gas pressure that existed, and still exists, are everywhere to be seen in the cones that are extinct and in those where the gas will burn today. The basin proper belongs to the sub-carboniferous period, which will be shown by the fauna in the specimens I secured.

**The Marine Fauna.**

The fauna of these series are chiefly bryozoa, corals, sphenolites ponderosa, brachiopods, strophodontia concava, and the spirifer acuminatus, rensselaeria aquadrilata, gastropoda, loxoneura hamiltoniae. Also the remains of small fish resembling those that existed at that time, but not well enough preserved to truly classify.

There is an abundance of the above fauna found in various places throughout the basin, as well as the large shells belonging to the Comanche series which surround the basin. Numerous shells from the Jurassic rocks located near the northwest corner of the basin are found in the gulches entering the basin from that direction, such as the ammonites.

**CARACRISTI MAKES A REPORT ON CHIHUAHUA WATER SUPPLY**

Dr. C. F. Z. Caracristi, who passed through El Paso on Friday from Chihuahua on his way to Casas Grandes, has completed a survey and examination of the water bearing formations of the territory lying between San Antonio on the north, Ortiz on the south, Santa Isabel on the west and Palmito on the east, covering over 20,000 square kilometers of territory. The examination and survey have occupied over seven weeks and the result of these researches is now compiled into a report. He says the report will be very full on the subject of the water supply of that region.

"I have examined the sources of the water supply," says Dr. Caracristi, "and the geologic formations that have all received careful attention and I am of the opinion that the parties whom I represent in the matter will eventually make public the result of the survey. I can say, however, that there are at least 200,000 acres of land within the territory examined that are capable of irrigation by flowing wells and by being pumped by hydro-electric power."

**EUREKA SHAFT IS NEAR THE NINTH LEVEL POINT**

Morenel, Ariz., Oct. 21.—The sinking of the Eureka shaft of the Arizona Commercial property has progressed to within thirty feet of the point where the ninth level will be established. The operations are now complicated by the prevalence of water. It is generally known that owing to the encouraging information obtained from the diamond drilling, the management of the company expect noteworthy results from the operations to be carried on at a depth of 900 feet as soon as a generally sound sump can be made. Apparently the company is anticipating renewal of development on a somewhat larger scale than at present prevails as soon as the new level is established.

Some of the diamond drilling is reported on fairly good authority to have reached a depth of 700 feet below the seventh level and to have found good copper bearing material at that depth. Nearly all the territory east of the shaft toward the Superior and Boston property and away from the claims of the National Mining Exploration company,

**BI-METALLIC EXTENDS TUNNEL TO TAP GOLD DIKE.**

Is Considering Also Construction of Thirty Ton Gold Mill Near Lake Valley.

The Bi-Metallic Mining company, owner of gold mines 12 miles northeast of Lake Valley, N. M., is extending its new 600 foot tunnel to tap a wide free gold bearing trachyte dike, from which composite samplings assay \$15 per ton in gold. Some specimens of the ore show considerable free gold.

The company is considering the construction of a 30 ton gold mill in the near future, as Wisconsin people are negotiating for a controlling interest, the sale of which will provide ample funds for rushing the tunnel development and the installation of a modern amalgamating and cyanide mill, which cannot fail to put the property on the producing list and assure to the small number of stockholders reasonably certain returns.

**BURRO MOUNTAIN COMPANY INSTALLS A NEW CAGE.**

Silver City, N. M., Oct. 21.—The Burro Mountain Copper company has received a new cage for its shaft on the Newby claim. This cage is equipped with the most modern improvements. Judge Norman W. Haire, president of the Mangas Development company, and vice president Joe E. Sain, of Albuquerque, are in the city, in connection with company affairs. Whether there will be an early resumption of work is not yet known.

**MEXICO MINE OWNERS GO TO INSPECT PROPERTY**

Harry Holdeiman, secretary and treasurer of the Llano Copper company and a party of a dozen stockholders of the company passed through the city Friday morning, traveling in the private car "Sunbeam," en route to Noria, Sonora, Mexico, near which place the company's properties are located. He called on his friend, H. J. Betzler, manager of the depot barber shop, whom he knew in Kansas City, Mr. Holdeiman's headquarters.

**TRANSMISSION LINE FROM JEROME TO FOSSIL CREEK.**

Kurmer and Neagle, contractors, have commenced the construction of an electric transmission line from Jerome, Ariz., a distance of 40 miles, to the power house of the Arizona Power company on Fossil creek, to cost \$100,000. To accommodate the wires 400 towers will be erected, with two poles to each tower, the poles being 40 feet long. The new transmission line will greatly benefit the mines north and south of Jerome.

**PEABODY MINE IN JOHNSON DISTRICT TO BE DEVELOPED.**

It is said that the original stockholders of the old Peabody mine at Johnson camp, Cochise county, Arizona, having secured control of the property, will begin active work. They will also

operate the McCabe mines in Huachuca mountains.

The Black Prince company in the Johnson district is sinking its compartment shaft, which is down 300 feet.

**PACIFIC SMELTING COMPANY IS COMPLETING ITS SMELTER.**

The Pacific Smelting and Mining company is at present completing the lead smelter at Guaymas, Sonora, preparatory to blowing in. It also owns a copper smelter at Fundicion, Sonora. It also has several mines operating in the southern part of Sonora, one 25 miles west of Fundicion and several along the Yaqui river.

**LA PAZ PLACER SOLD.**

A 40-acre placer claim adjoining the New La Paz placer property in La Paz mining district, Yuma county, Arizona, has been purchased by R. J. McAdory of Los Angeles, the consideration being \$6000. Many Los Angeles people are interested in La Paz camp and a new townsite has been laid out on the New

La Paz property, and is named Arizona City.

**SALVADOR STRIKES ORE.**  
The Salvador mine of Sonora, Mexico, has struck rich gold-silver-lead ore in its shaft at a depth of 45 feet. The lode is six feet in width, with two and a half feet of ore on the foot wall. The property belongs to J. J. Holman, J. J. Scott and William Gunn of Bismarck, Ariz.

**STEAM PLANT FOR LA PRIETA.**

La Prieta mine, 33 miles north of Alamos, Sonora, is installing a steam plant, pumps, hoist, etc. The shaft is down 100 feet, and a crosscut on this level has opened up ore that runs from one to four ounces in gold a ton.

**ORE FROM C. O. D. MINE.**

"One day this week," says the Mojave Miner, "two men took from the slope of the 300 foot level of the C. O. D. mine 17 sacks of ore having a value of \$2000 per ton. In this stop the values run to gold."

**\$3.50 Recipe Cures Weak Men--FREE**

Send Name and Address Today--You Can Have It Free and Be Strong and Vigorous.

I have in my possession a prescription for nervous debility, lack of vigor, weakened manhood, failing memory and lame back, brought on by excesses, unclean habits, or the follies of youth, that has cured so many weak and nervous men right in their own homes--without any additional help or medicine--that I think every man who wishes to regain his manly power and virility, quickly and quietly, should have a copy. So I have determined to send a copy of the prescription free of charge, in a plain, ordinary sealed envelope to any man who will write me for it.

This prescription comes from a physician who has made a special study of men and I am convinced it is the surest acting combination for the cure of deficient manhood and vigor failure ever put together.

I think I owe it to my fellow man to send them a copy in confidence so that any man anywhere who is weak and discouraged with repeated failures may stop drugging himself with harmful patent medicines, secure what I believe is the quickest acting restorative, upbuilding, SPOT TOUCHING drop me a line like this: Dr. A. E. Mich., and I will send you a copy of this splendid recipe in a plain ordinary envelope free of charge. A great many doctors would charge \$1.00 to \$5.00 for merely writing out a prescription like this--but I send it entirely free.
