

Some Arizona Mines You Have Heard About

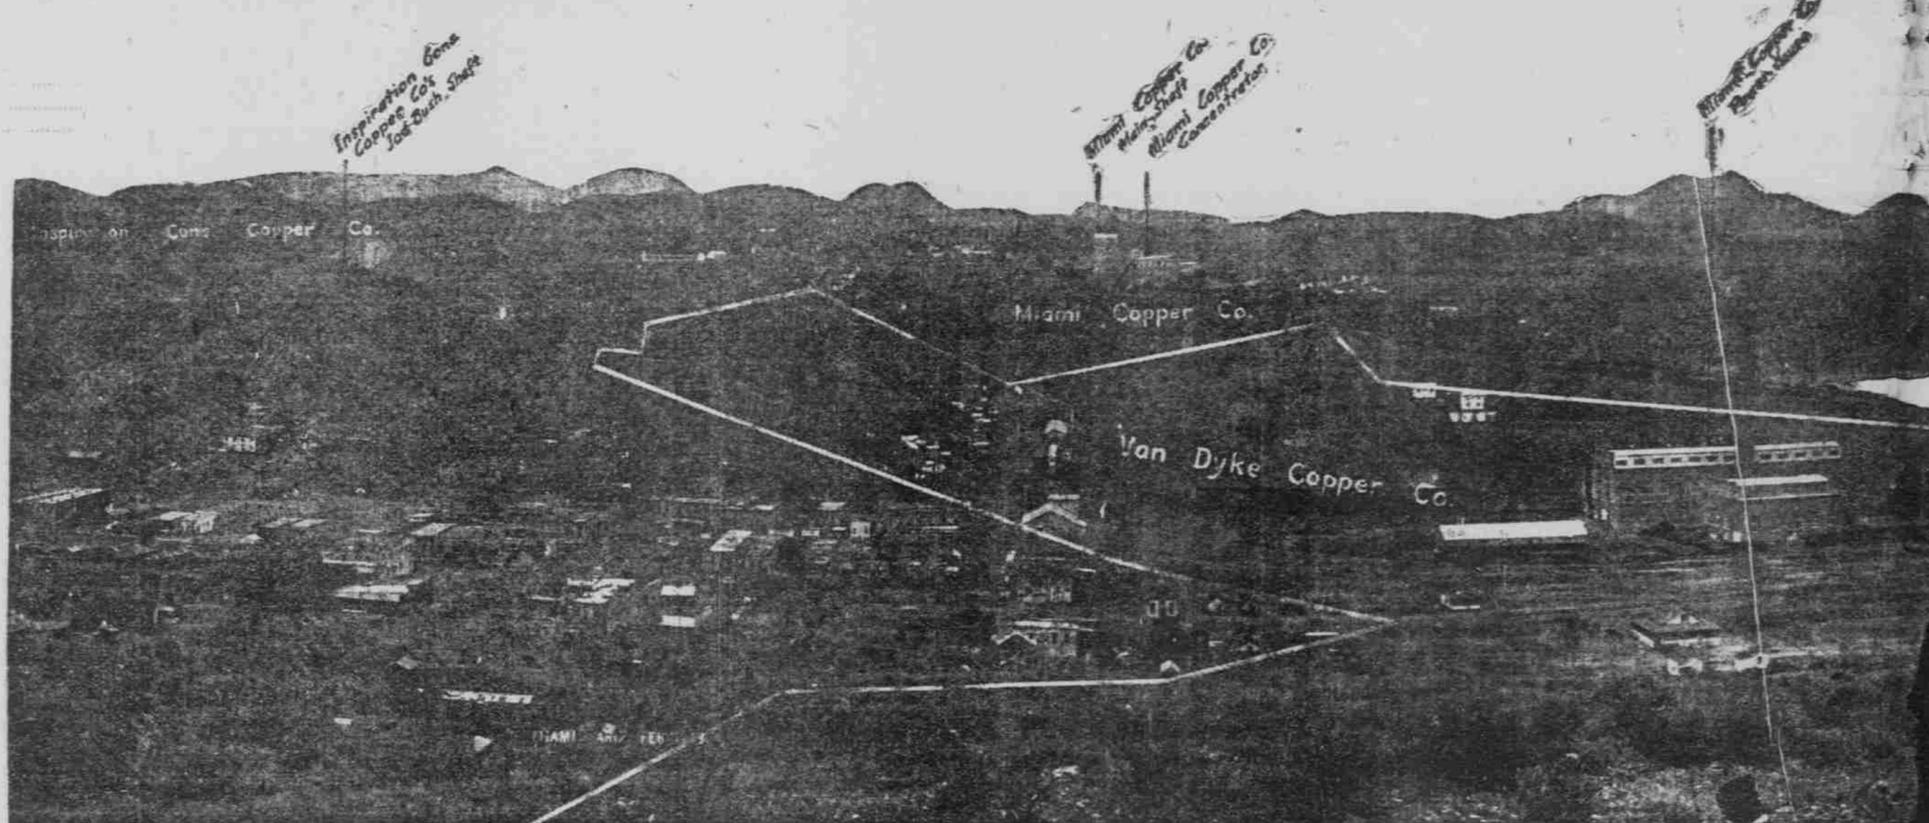

SOME of the mines you have heard about in Arizona which made fortunes for their investors based upon their location in reference to proven ore bodies in the district in which they were located are: Live Oak Copper Company, Calumet and Arizona, Junction and United Verde Extension. These mines have made millions for their backers. These mines were started because they were located close in to large proven ore bodies. The Live Oak Copper Company was developed because of its nearness to the Inspiration and the Miami. It won handsomely. Two years work developed 26,000,000 tons of ore. The Calumet and Arizona based its proposition upon its location to the Copper Queen mine. Stock sold for ten dollars is now worth over seventy and it has paid millions of dollars in dividends. The Junction was based upon its relation and nearness to the Calumet and Arizona. Its stock made many people in Arizona rich. The United Verde Extension joins the United Verde. It sold for less than a dollar. Today it sells for about forty dollars. All of these mines started because their backers believed they would strike an extension of the ore bodies already known and developed in the older mines of their neighborhood. The Van Dyke Copper Company is only two hundred yards from one of the world's greatest known copper ore bodies.

THE VAN DYKE CO

OF MIAMI

Now Offers Attractive of El Paso and

The Van Dyke Copper Company is organized under the laws of Arizona. Authorized capital stock \$5,000,000, divided into 100,000 shares, at an initial price of 50c per share. The company reserves the privilege of rejecting all subscriptions.

Panorama View of the Van Dyke Copper Company Holdings, Showing Approximately Its Location in Reference to the Inspiration and the Miami—A Town of 10,000 People, Supported Entirely By the Copper Mines of the District. Miami Was Founded October 11th, 1909.

The Men to Whom You Entrust Your Money

CLEVE W. VAN DYKE, President.

Original owner and locator of the Van Dyke Copper company, one of the early pioneers of the district. Founder of Miami in 1909. President of the Miami Townsite company. President of the Miami Electric Light and Power company. President of Miami Telephone and Water Systems.

**HOVAL A. SMITH, M. E.,
Vice President and Consulting Engineer.**

Mr. Smith was formerly chief mining engineer of the Calumet & Arizona Mining company, Bisbee, Ariz., and is ex-President of the Live Oak Development company. This company's property was located west of the Van Dyke Copper company in the same district. It developed 26,000,000 tons of ore and was amalgamated with the Inspiration to form the present Inspiration Consolidated Copper company. The work of the development of this ore body was under the personal supervision of Mr. Smith, who is thoroughly conversant with the geology of this district.

HON. WM. E. BROOKS, Treasurer.

Treasurer of the Van Dyke Copper company. Attorney at Law. Has served as representative of Gila county in every state legislature since Arizona was admitted into the Union. Mr. Brooks served as speaker of the house of representatives during the last two sessions. He is thoroughly familiar with the Van Dyke Copper company, as it is located in Gila county. Mr. Brooks has passed upon the titles for the Van Dyke Copper company.

**L. D. VAN DYKE
Vice President and Director of the Miami Townsite company.**

C. B. LOOMIS

Secretary and Director of the Miami Townsite company. The directors are well known, successful men whose activities in the "Miami Copper Belt" qualify them specifically to handle the finances and develop the Van Dyke Copper company. They have developed millions of dollars worth of Arizona resources and have a definite personal knowledge of the district and the nature and occurrence of the ore bodies.

Study Both the Photograph and the Map They Are Interesting

The Above Map Shows Approximate Location of "BILLION DOLLAR" Ore Zone. The Long Axis of the Van Dyke Copper Company is Approximately 2 Miles Long. The Long Axis of the Van Dyke Copper Company is Approximately 2 Miles Long.

The Whole Proposition Is This:

A stream of Copper Ore about two and one half miles long and a half mile wide in its widest part has percolated the hills above the Van Dyke Copper Co. property with a billion dollars worth of Copper Ore. This great ore Zone is headed down hill toward the Van Dyke Copper Company's property. It has been discovered within two hundred yards of the end line of the Van Dyke Copper Company's interests. Has this big massive copper ore body stopped dead short or has it continued to flow down hill into the Van Dyke Copper Company's property and three miles through it? The world will never know the answer to this question until it is explored by means of shafts, tunnels and drills. The members of the board of directors noted above have been given the duty to determine this great question. They are already prepared and will soon be operating. The preliminary work has begun and in a few days they will be going down to secure this information. What do you think about it? Is the ore there and if you believe it is there how strongly do you believe it? The shares are selling today for fifty cents a share. Every shareholder participates in the profits of this great enterprise in proportion to his holdings.

SHARES ARE NOW BEING SOLD FOR FIFTY CENTS EACH
