Up to the first of May there was an accumulated deficiency in rain of .623 of an inch since the first of January. The temperature for the month averaged 62.1, the same as last year and, with that exception, the lowest since 1911, when the monthly mean for April was 61.7.

MUST SPEED UP SHEEP INDUSTRY

Government Report Suggests Grazing on Unfit Farm Lands, Ranges.

Washington, D. C., May 2.—Unless the sheep industry of the United States adjusts itself to the changed economic conditions of the day, production will continue to decline in the proportion it has in the past, in the opinion of the committee on statistics and standards of the chamber of commerce of the United States, which has completed an investigation of the industry.

The principal remedies suggested in the committee report, made public today, are the use for sheep grazing of the agriculturally worthless and cheap cut-over timber lands of the country; the more general and systematic raising of sheep on the farms and continued use of the great ranges of the west to their full capacity.
