### "PIANO" MAKES QUEER MUSIC

Probably Paderewski Would Shudder at Sight of This Native African Instrument.

Africans are a music-loving people, though in a native African village there is not much to be had that will produce sounds of a harmonious nature. There the musical instruments are of the crudest kind. Even if the African musician has the real musical gift, with his very best effort it cannot be displayed creditably on the crude instruments at hand.

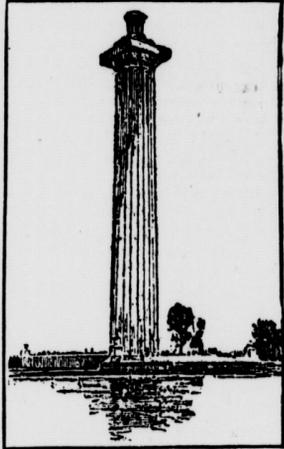

The African "piano," ungainly looking as it is, shows a good bit of ingenuity both in its construction and its manipulation, so that the sounds blend in some sort of musical strains. There are usually 18 to 20 "keys" in the makeup of an African piano. Each is of polished wood 3 to 4 inches wide and 14 to 15 inches in length. Under each key is a gourd attached by means of a resinous gum, or an application of cement very durable when it hardens. A half circular strip of flexible wood holds all in place. The gourds are of different sizes. Two sticks, like drum sticks, are used by the player, one in each hand; and the playing is done by pounding with the sticks upon the keys, each of which, when struck, gives out a different sound.

In some of the villages of Africa where missionaries dwell, the "piano" drum, for that is what it really is, serves as the church "bell," to summon the people to the services. If manipulated by the native evangelist, which is often the case, the call to prayer and praise rings out with all the lusty musical (?) sounds his vigorous pounding can bring from it.

### WORTHY OF GREAT FIGHTER

Memorial to Oliver Hazard Perry at Put-in-Bay Really Beautiful Work of Art.

The memorial monument in honor of Oliver Hazard Perry at Put-in-Bay, O., commemorating his victory over the British in the battle of Lake Erie, September 10, 1813, is noted for its beauty and simplicity. The cost was \$800,000. It is built of granite, concrete, marble and Stella bronze. The magnificent Grecian-Doric column rises to a height

The Perry Memorial.

of 350 feet from the base. The diameter is 45 feet, and the neck 35 feet and gallery 45 feet square. The octopod is 18 feet in diameter and 23 feet high and contains a frosted glass dome, illuminated by electricity. It was off Put-in-Bay that Perry, in command of an American squadron, captured the British fleet and sent to his superior officer, General Harrison, his famous dispatch: "We have met the enemy and they are ours."

### Change Shape of Cattle's Horns.

An English inventor undertakes to change the shape of the horns of cattle by hanging weights on them while they are growing. The weights are pear-shaped, with a tapered hole lengthwise to fit the horn, and are held in place by setscrews. The queer devices are illustrated in Popular Mechanics Magazine.

### Coal in the Philippines.

A vein of coal has been discovered in the Philippines which is said to be up to the quality of the Chinese fuels. The amount has not been ascertained, but it is certain that it will answer the demands of the islands for many years.

### FRIENDS GATHER AT FUNERAL SERVICES FOR MRS. BERTRAND

Friends gathered Tuesday at the Knapp Parlors to attend the funeral services for the late Mrs. Lucy A. Bertrand, who passed away at St. Joseph's hospital in Bellingham Sunday, following an operation. Rev. W. O. Benadom conducted the services.

Mrs. Bertrand was 52 years old. She was born at Lower Sumas, B. C. On June 4, 1888, she was married to Charles Bertrand. Most of her life was spent on a farm at South Aldergrove, B. C.

She was a member of the Methodist Church.

Besides her husband, she is survived by a daughter, Myrtle.

### NEWS OF LYNDEN

Announcement has been made of the engagement of Miss Edith Cowgill of Bellingham to Dr. John Mulder.

The ice plant at the creamery is being repaired. Some of the brine pipes burst last winter, and they have been replaced by new ones.

The Baptist Missionary Society met with Mrs. B. A. Axlund Wednesday.

W. H. Waple's shingle mill is expected to re-open Monday morning, after having been idle for some time for repairs. Upwards of a dozen men will be employed, and this crew will turn out about 75,000 shingles a day.

Mr. and Mrs. R. F. Jones and children visited relatives in Sumas Sunday.

Mrs. Beavers is spending a few days in Bellingham this week.

Norman Crosier is ill this week.

The job of excavating for the new Edson residence on Fifth and Edson streets was completed this week.

Work will begin on the concrete foundation at once, and the building will be finished as soon as possible. The structure will be a modern five-room bungalow, of hollow tile construction, with a stucco exterior. The house will be 28x48 feet in size, and will face Fifth street.

Tomorrow afternoon the P. N. G. Club will be entertained by Mesdames J. C. Anderson, Mattie Anderson, and George Vinup at the Vinup home.

Gale Edson, Douglas Slade, and Frances Knapp returned home from the University of Washington last night for a few days of vacation. Other University students who are expected home this week include Albert Bowman, Marian Bay, Clifton Worthen and Ruth Oakes.

Hoyt Horton has been ill this week.

The local Odd Fellows and the Rebekahs entertained Saturday evening. A delightful time was enjoyed by a large number of members. The program committee was composed of the following: Mr. and Mrs. C. B. Bay, Mr. and Mrs. Al Bergman, and Mr. and Mrs. O. H. Olson.

## BROOD CHICKS PROPERLY THE IMPROVED 1920 AMERICAN BROODER STOVE

FRESH AIR The Ventilating or Fresh Air system of the Improved American is simply perfect, the air being automatically drawn into room and over chicks after it has first been warmed to exactly the proper temperature.

USES ONE-HALF THE FUEL This improved stove burns only one-half that of other Brooder Stoves, because it has three times the heat deflecting surface and better heat distribution.

AUTOMATIC HEAT CONTROL It is perfectly automatic and works to a degree.

RADIATOR AND DEFLECTOR It is the only Brooder Stove provided with a large Adjustable Heat and Fresh Air Deflector, which can be raised and lowered at will. This is in addition to the regular Heat Radiator. By the use of this double equipment, the brooder is adapted for any kind of a house, no matter how cold or open, Laying House, or Brooder House. This model was especially designed for Whatcom county conditions by George R. Shoup.

BURNS AS FUEL Kerosene (Coal Oil), Distillate, Stove Oil, (Oil Tops).

(CAN MAKE IMMEDIATE DELIVERIES)

## What the Users Say About the Perfection Milker in Whatcom County

Lynden, Wash., Mar. 13, 1920  
Mr. Bellingar:

It is not true that the Perfection Milker injures the cows by making lumps in their teats. I have been using a Perfection for 3 years and am satisfied that it does not injure the cows.

I have been milking from 16 to 20 cows this winter and in the last 6 months I have had 60 cents expense on the machine.

Respectfully,  
Art Boehringer.

Lynden, Wn., Mar. 16, 1920  
Mr. P. Bellingar, Lynden R2,

Dear Sir:—In answer to yours of the 14th asking how I like my milking machine I will say that it has proven very satisfactory. I am milking 23 cows with one double unit, as you know, in one hour and twenty minutes and do not hurry either. I am putting in about 35 cows in a few days and will want another double unit soon.

The Perfection Milker is a very good machine. I am milking cows with very large teats and cows with very small teats (so small that it would be almost impossible to milk them by hand), all with the same teat cup and will say again that it is very satisfactory.

Yours very truly,  
Chas. T. Hall.

R 2, Lynden, Wash.,  
March 10, 1920

Mr. P. Bellingar.

Dear Sir:—In answer to the letter I had from you asking if it is true what other agents are saying about the Perfection Milker, that it injures the cows, causing lumps and calouses to form in the teats.

I have used the Perfection Milker 9 months, on 15 cows, with good success, and find that it has not injured my cows' teats in anyway, but that a cow with sore teats will stand still for machine milking, while I had to tie her legs for hand milking. I had one cow with a cut about 2 inches long and 1/2 inch wide from barbed wire, and the second day after it was cut I went to milk her with the machine again, and it did not even draw the scab loose from the cut, but allowed it to heal much quicker than the most careful hand milking could have done.

Anyone telling you that the Perfection Milker injures the cows' teats, can, if interested enough, examine my cows at any time.

The only repairs I have had are some rubber gaskets in the end of the teat cups at 5c each, and I broke a couple of pieces of tubing 4 or 5 inches long by accident. Am running the milker with a 1 1/2-horse engine and using 2 gallons of gasoline a week.

Yours truly,  
Cornelius Buizer.

Lynden, Wash., Mar. 11, 1920

Mr. P. Bellingar:

In reply to your request as to how I liked my Perfection Milker, will say I have now used it for nearly two years and am very well pleased with

the way it works. Will also say it does not cause lumps in the cows' teats. Am milking thirty cows, have had very little expense, and am perfectly satisfied.

G. Blankenforth.

Lynden, Wash., 3-8-20.

Mr. Bellingar.  
Sir:—In answer to your letter I can only say the best of your machine because it has worked to perfection for us. We have 20 cows and have used it nearly 9 months, and it has caused no lumps or sore teats yet. The upkeep is very small.

Respectfully yours,  
Mr. Nick Haveman.

Everson, Wash.,  
March 13, 1920.

Pete Bellingar.  
Dear Sir:—I am using my milker every day and it is giving me great success.

My cows' teats never were as nice and free from sores as they are now. I have been using my milker for ten months, and milking 12 cows, and it has cost me 50 cents for upkeep.

Sincerely yours,  
John Biehle.

P. S. I got a suction hose from you which I never paid for, and I want another one 40 inches long. So if you come down this way bring it along.

Everson, Wash., Mar. 15, 1920

Mr. P. Bellingar,  
Lynden, Wash.

Dear Sir:  
I will try and answer the questions asked in regard to the Perfection Milker.

We have used ours two years and it has not caused lumps or calouses on our cows or injured them in any way.

We are milking 14 cows at the present time and expect to milk more this summer.

The upkeep has been very little. I think \$10 would cover all expense. We use it all the time, the only time the milker doesn't work is when the engine refuses to work.

Respectfully yours,  
Dwight Terry.

Mt. Vernon, Wash.,  
March 10, 1920.

The J. C. Robinson Co.,  
Portland, Oregon.

Dear Sir:—In reply to your request in regard to how I am getting along with the Perfection Milking Machine will say that I have had it now for over nine months and it has never missed a milking. Am milking from 25 to 40 cows and we had some weather round zero, but the machine was always on the job and we have not had a cow with a sore teat since the ones that were sore when we got the machine healed up. A cow came in two weeks ago that belongs to one of my boys that did not give her milk all down to the machine last year. I asked the boy to-day how she was doing this year and he said she was giving about six gallons a day which is more than she ever gave by hand. I think the machine is all that the name implies.—Perfection.

Respectfully yours,  
(Signed) Franklin Good.

Long Beach, Wash.,  
March 7, 1920.

J. C. Robinson Co.,  
Dear Sirs:

In response to your letter of the 26th will say I think I got more milk with the milker than by hand. I
