HINTS FOR FARMERS

Pick the Bagworms From the Trees.

On many fruit trees and shade trees one may find the cocoons of bagworms. They are usually from one to two inches long and are suspended by one of the pointed ends from the smaller branches of the trees. Each of the larger cocoons contains during the winter a large number of eggs. If these are allowed to remain on the tree until the eggs hatch in the spring, there will be produced from the eggs in a few cocoons enough young worms to strip all the leaves from a tree early in the summer. These worms seem to be especially fond of cedar trees and are very likely to be overlooked on these trees until they have become so numerous as to seriously damage the trees.

With these worms a stitch in time saves ninety. The cocoons picked from the trees should be thoroughly destroyed. Should it become necessary to destroy large numbers of the worms in the summer a good plan would be to dust or spray the trees with paris green, london purple or some other arsenical poison. One of the larger cocoons left on a marked limb of a small tree should afford a crop of worms which would give interesting and instructive object lessons to boys and girls and older folks. This crop of worms should be thinned from time to time, and when the worms retire into the cocoons to pupate the twigs from which they hang may be placed in covered glass jars. The male moths emerge as winged adults, but the female moths remain in the cocoons.—Midland Farmer.

Grape Black Rot.

Black rot in grapes causes the decay of the green berries, which do not fall, but dry up on the branch. The leaves and twigs of the grape are affected by the brown rot as well as the fruit. The first signs of it are whitish patches which later turn brown. Affected berries turn dark brown and wither. Powdery mildew, a parasitic disease, appears on leaves and twigs as a powdery growth. Sometimes the fruit on mildewed vines cracks open.

Where these diseases show themselves it is well to keep the vines in vigorous health and spray before the buds open in the spring, after budding and once ten days later. Four pounds of blue vitriol and four pounds of slaked lime mixed with a little water and diluted with fifty gallons of water make a good spray.

Rural Free Delivery.

We hear more or less complaint about the service on some rural free delivery routes. While some patrons are much better off under the new system, others who live off the main roads are worse off than they were before the little post offices were given up. Of course no one expects that a complete change of

system, as this is, would work without any hitch from the start, but there ought to be steady and rapid improvement. The delivery systems in town and city are constantly being changed and improved. The same must be done with rural delivery. It will not do simply to change the system of country delivery and then let it alone. The best is none too good for the farmer.—Rural New Yorker.

Hungarian Grass.

If Hungarian grass were cut for hay as early as it should be—that is, in first blossom—it would be more highly regarded, for while it has not been ranked with hay made from the leguminous plants its analytical classification approaches so near to them that it is worth considering. Its habit of quick growth makes it especially valuable for planting after some earlier crop is removed.

Unless the land is very rich all these crops will manifest appreciation of an application of about 250 pounds acid phosphate, 40 pounds muriate of potash and 10 pounds nitrate of soda and heavy applications of the manure of tillage.—W. F. McSparran in Stockman and Farmer.

Barren Cornstalks.

Of course all farmers have noticed the large number of barren stalks in almost every field of corn. These barren stalks tassel and produce pollen, but the female blossom or silks are not pollenized, and no ears are formed. It has been determined by tests at the experiment stations that this barrenness is the result of seeds that have grown from plants fertilized by barren stalks. Where barren stalks have been cut away before the maturity of the pollen the number of barren stalks grown from the seed thus produced was greatly reduced. Therefore seed grown in fields having many barren stalks should never be used for planting.—Farm and Ranch.

Setting Strawberry Plants.

Strawberry plants will be injured badly by ten minutes' drying in the air while being set. A good plan is to distribute them in little boxes along the rows. They are taken from the boxes one by one and set immediately. Set even with the surface and press so firmly that a leaf could be pulled off without starting the plant. To cultivate the newly set plants a horse weeder is the implement to use.

Laxative Bromo Quinine
Cures a Cold in One Day, Grip in 2 Days

E. H. Brown

I am now prepared to do all kinds of land business, homestead entries and proofs, contests, etc. Have had 25 years experience in land cases. W. A. Inman, U. S. Commissioner, Colfax, Wash. Office, Room 2, Pioneer block.

Good Roads Versus Good Schools.

One of the most beneficial results of road improvement is the facility it gives to consolidate country schools and thus concentrate our children into central buildings, so making graded schools possible in our country districts. Where improved roads exist the children by means of bicycles easily go long distances to central schools. Thus graded roads make possible graded schools, the improved roads working in harmony with the state education law, giving the children of the rural districts the same advantages as those residing in cities. In one year forty-four Connecticut towns by means of improved roads were enabled to give free transportation to a large number of their pupils, says the New York Tribune. Eighty-four small schools were closed, and 849 children rode to the central schools. The cost of transportation was about \$12,000, but a gross amount of some \$20,000 was saved, leaving a net saving of some \$8,000. This saving was only a small part of the benefit derived, for it resulted in a better attendance and better schools. This close co-ordination between improved roads and education cannot be too strongly impressed upon the public attention.

Roadbuilding in California.

The experience in California has shown that even the longer term convicts can be employed to great advantage by the state in quarrying and crushing stone at one or more central points for use in permanent roadbuilding. Stone is being extensively crushed in this way in California at less than half what it costs to do this work with hired labor in other states. The quarries used for this purpose are surrounded by a strong stockade, which also incloses the convict quarters, and the escape of prisoners under such conditions is not greater than that from the state prisons.

"I have been troubled for some time with indigestion and sour stomach," says Mrs. Sarah W. Curtis of Lee, Mass., "and have been taking Chamberlain's Stomach and Liver Tablets which have helped me very much so that now I can eat many things that before I could not." If you have any trouble with your stomach why not take these Tablets and get well? For sale by Elk Drug Store.

Short and Long Courtships.

Young ladies in Russia are not at all averse to long engagements and use all sorts of artifices to stave off the wedding day as long as possible, while in Siam, where old maids are unknown, as all girls marry, the recognized length of an engagement is one month. If an engaged man in the Argentine Republic dallies beyond a reasonable time in leading his fiancée to the altar, he is heavily fined, and if a resident of the republic should fail to marry he is taxed until he reaches the age of eighty. In no country in the world are courtships so abnormally long as in Bohemia, where engagements commonly last from fifteen to twenty years. In fact, there recently died at the age of ninety-nine an old man who had been courting for seventy-five years and who was married on his deathbed.

Stops the Cough and Works off the Cold.

Laxative Bromo-Quinine Tablets cure a cold in one day. No cure, no pay. Price 25 cents.

BLIND-FOLD.

Blindfold a woman and she loses all confidence in herself. Her step is slow, hesitating and uncertain. Her hands are raised to ward the imaginary blows which threaten her. When a sick woman seeks the means of health she is often like a woman blindfold. She has no confidence. She cannot tell what her effort will lead to. She turns now to this side and then to the other in uncertainty and doubt.

The sick woman who uses Dr. Pierce's Favorite Prescription may do so with absolute confidence. It invites open-eyed investigation. There need be no hesitation in following the hundreds of thousands of women who have found a perfect cure for womanly ills in the use of this medicine.

"Favorite Prescription" cures irregularity and dries weakening drains. It heals inflammation and ulceration and cures female weakness.

"With a heart full of gratitude to you for sending out over the land your wonderful medicine I send these few lines, hoping that some poor suffering woman will try Dr. Pierce's medicines," writes Mrs. Cora L. Root of Greenspring Furnace, Washington Co., Maryland. "I had suffered severely from female weakness and had to be in bed a great deal of the time. Had headache, backache, and pain in left side when lying down. I commenced taking Dr. Pierce's Favorite Prescription, and had not taken two bottles when I was able to be around again and do my work with but little pain. Can now eat anything and it never hurts me any more. Have taken seven bottles of Dr. Pierce's Favorite Prescription, and one of his 'Compound Extract of Smart Weed' and several vials of his 'Pleasant Pellets.' Feeling better every day. My husband says I look better every day."
Dr. Pierce's Pleasant Pellets cure biliousness and sick headache.
