**HINTS FOR CARE OF POULTS**

Of all the causes of the death of poults the most frequent is without doubt over-feeding. In a wild state turkeys are not subject to most of the ills of domestic fowls and in the wild state they are more often hungry than not. About 100 young poults have been raised at the State College poultry plant this year. The method of feeding has been as follows: The poults were first fed about 48 hours after hatching. The feed consisted of an equal bulk of rolled oats (breakfast food form, but uncooked) and finely cut dandelion leaves and stems. The mixture was sprinkled on clean coarse gravel. The feeder stood with watch in hand and gave only what the poults would clean up in two minutes. The poults were fed five times per day for the first four weeks and this two-minute time schedule was rigidly observed. After the first few feeds, hard boiled egg was crushed, shell and all, and thoroughly rubbed into the rolled oats. A little finely cracked wheat was added to the mixture but always one-half the ration by bulk was finely shredded tender green food. After the third day sour milk was placed before the poults at 10:00 a. m. and at 3:00 p. m. in quantity to last from one to two hours. Care was taken in clabbering the milk to not harden the curd, which makes it extremely indigestible. About one-third of the whey was discarded and the remaining two-thirds stirred again into the curd. Chick grit and fine granulated charcoal were sprinkled on the coarse sand of the brooder floor or placed in hoppers where the turkey mothers ranged with their flocks.

The mash was first fed at noon daily when the poults were from ten to fourteen days old. It consisted of equal parts by weight of bran, ground wheat, and ground oats moistened to a crumbly dry consistency with curd. The hard boiled eggs were discontinued about the fourth week and about ten per cent by weight of good grade beef scrap was then added to the mash. It should be noted that cracked corn and corn meal are not used in the ration until the turkeys are ready for fattening. After the fourth week the poults were fed three times daily and feeding time increased gradually from three to five minutes. After the fifth week sprouted oats formed the morning feed, moist mash the noon feed and grain the night feed. The young poults had as range a two-acre grove of lindens, English and red maple, and other shade trees. A grass mixture with dandelions grew under the trees. The college poults have this year been hatched in incubators and reared in brooders as successfully as those hatched and reared by turkey hens.

A critical time in the life of the poults comes with the "shooting the red." The following tonic is recommended by a southern turkey woman, Miss Kate Mahoney, as beneficial at the time young poults "shoot the red" or for young or mature stock at any time when bowel trouble or sluggishness of action is observed:

- 1 pound of ginger
- ¼ pound salicylate of soda
- ½ lb. sulphate iron (powdered)
- ¼ pound camphor
- 1 teaspoon turpentine

Use water to moisten and make into pills the size of a small marble. For mature birds give three pills daily and poults in proportion to size; or the tonic may be dissolved in sweet milk for the poults to drink. Another tonic highly recommended is:

- Powdered Cassia bark... 3 oz.
- Powdered ginger... 10 oz.
- Powdered gentian... 1 oz.
- Powdered Aniseed... 1 oz.
- Carbonate of iron... 5 oz.

Mix ingredients well to gether and for a brood of six at four weeks of age dissolve one level teaspoon in water and used to moisten a mash. Distribute mash as evenly as possible in feeding.—Helen Dow Whitaker, Extension Specialist in Poultry, State College of Washington.

**NOTICE OF APPOINTMENT AND TO CREDITORS OF K. P. ALLEN, DECEASED**

Notice is hereby given that the undersigned has been appointed Executor of the Last Will of K. P. Allen, deceased, and has qualified as such Executor, and notice is hereby given to the creditors of K. P. Allen, deceased, to serve their claims on the undersigned Executor at his office in Pullman, Wash., and file the same with the Clerk of the Superior Court of Whitman County, Washington, together with proof of service within six months after the date of the first publication of this notice and if not served and filed within the time aforesaid they will be forever barred. Date of first publication of this notice is August 24, 1917.

THOMAS NEILL, Executor of Last Will of K. P. Allen, Deceased. aug24sep14

**THE FALL GARDEN**

We have become so accustomed to thinking that spring is the only time garden crops can be planted that very few people make use of the fall garden.

If conditions are favorable, that is, the soil is moist and the autumn not too short, it is possible to plant at this time certain garden crops and grow an abundance of fine, crisp, tender vegetables for fall use.

- These factors must be considered:
1. The soil must be mellow and moist.
  2. Thin as soon as the plants are well up.
  3. Cultivate and irrigate frequently if the soil is dry.
  4. Sow only early vegetables.
  5. Firm the soil around the seeds.

There is not a large list of vegetables that can be sown at this time but the few that can, will give good returns under favorable conditions.

**Suggestive Crops**

- Beets—Crosby Egyptian, Early Eclipse
- Carrots—Chantenay, Earliest Short Horn
- Lettuce—Grand Rapids, Hanson
- Peas—Alaska, American Wonder
- Spinach—Victoria
- Turnips—Early Purple Top

Plant the fall garden in the same manner the spring garden is planted and give it the very best of care.

The fall garden gives an excellent opportunity to produce a quantity of canning vegetables like beets, carrots, peas, and spinach. This is especially true of carrots and beets. Very few people realize the value of these crops, nor can they thoroughly appreciate them until during the winter when fresh, tender vegetables are unobtainable they can open a can of carrots or beets.

Turnips, in addition to being a good table crop, offer an opportunity for the production of a quantity of feed for stock.

**NEW FIRE HYDRANT**

The city council has ordered the installation of a fire hydrant on the corner of Olson and Church streets to provide fire protection for the warehouses and coal sheds on the O.-W. R. & N. tracks. The fire and water committee and the city water superintendent were instructed to purchase the pipe required to reach the new hydrant from the present city mains.

In Pend Oreille County the week devoted to the Conservation of Food was combined with the Canning Club work under the direction of M. J. Newhouse, County Agricultural Agent.

By this plan, Mrs. Elizabeth Jones, Assistant Club Leader, was enabled to meet with club members, instruct the clubs in canning, and to attend club meetings.

A canning demonstration in the canning of fresh brook trout, chicken, peas, and cherries was given at Pomona Grange meeting at Usk, August 11. More than two hundred people were present. Demonstrations were given at Deer Valley, Diamond Lake, Usk, Delena, three rural places, and Metairie Falls, Ione, Cusick and Newport.

Considerable work has already been done at each of these places. Every one promised additional efforts to insure no wasted products this year.

Increased interest was shown in club work and next year promises increased enrollments.

**NORTHWESTERN POLICY NOT ASSESSABLE**

What Fishback Says of the Northwestern Mutual Fire Association

The following letter is self-explanatory:

Olympia, Wash., Aug. 1, 1917. Mr. L. C. Guthrie, Pullman, Wash.

Dear Sir: I am in receipt of your letter of the 28th relative to the Northwestern Mutual Fire Insurance Company.

Under the laws of this state the Northwestern Mutual Fire association are regularly permitted to, and in fact do, issue non-assessable policies. Notwithstanding that many of the agents for the stock companies state that they can not issue such a policy, still they are issuing them continually, and doing it under the provisions of Section 6059-89 of the Remington-Ballinger Code.

Yours truly, F. O. FISHBACK, Insurance Commissioner. GEO. N. HENRY, Local Agent, Pullman, Washington.

**CONSERVATION OF FOOD WEEK SPOKANE COUNTY**

Mrs. Elizabeth Jones, Assistant State Club Leader, and O. S. Fletcher, County Club Leader, worked out a plan for Mr. Charles Heberd, chairman for the National Council of Defense, whereby six ladies who had taken the training in conservation of foods at the North Central High School were taken into other places in the county to carry work to all the women. By this plan every woman and girl has the opportunity of receiving this training offered by the Washington State College.

Each of these ladies remains three days in a place, teaching canning and drying of all food products, helps organize Mother-Daughter Clubs to continue the work in each community until the close of the canning season.

Eighteen places will be reached in this way. The work is progressing very promisingly and gratifying results are expected.

**NEW APRON**

Among the many new apron patterns there is one which is extremely simple and practical, and just the thing to wear when doing the family mending. It is made of two large pieces of white dotted swiss, cut round at the bottom and sewed together at the edge. A slit is made in the center of the front piece from the waistband to within eight inches of the bottom. The edges of the opening are hemmed. This forms an apron which is also an enormous pocket, in which the sewing materials may be placed—out of reach of baby's inquisitive little fingers.

A large evaporator plant is being rushed to completion at Yakima.

Prescott is organizing a home guard to protect its wheat crops. It is in the midst of a large bluestem district.

In sections where farmers need to secure seed wheat from districts outside their own, it would be well to look into the seed situation as early as possible. One should have pretty clearly in mind the variety that he is to grow and where the very best quality of that particular seed may be obtained. If it is a section in which winter varieties do well, he should be sure to get enough and at once, to sow a large proportion to winter rather than spring grain. In case something should go wrong with the winter grain, he still has another chance to get a crop of spring grain later. However, in most instances his fall grain would likely yield better than spring grain, if sown under the proper conditions.

In practically every locality one finds too many varieties of wheat. These are not all equally good, and it seems that a reduction in number could be made. If the number could be limited to a few of the very best, it would simplify marketing problems very materially.

See Duthie for all kinds of lumber. apr24ft

**PULLMAN SAVINGS AND LOAN ASSOCIATION**

To provide a systematic and absolutely safe plan for the investment of savings, and to aid its members to acquire homes of their own is the object of the Pullman Savings and Loan Association. The Association is in every sense a HOME institution.

Who It's For It is for the Practical Man, who realizing the uncertainties of business and health, and of the folly of spending all his money as fast as he gets it, provides for an emergency.

It is for the Prudent Woman, who out of her earnings or allowance, desires to put away a little money, monthly, where it will be securely and profitably invested, and give her the least trouble and where she can get it when needed.

It is for the Young Man possessing the manhood and determination to save something every month from his earnings as a reserve fund, to draw on when sick or out of a position, for providing a home or for a start in business.

It is for Boys and Girls, to help them to be economical and industrious and to encourage them to acquire the habit of saving, provide a fund to educate them and to make them independent.

It is for Societies, Fraternal and Other Organizations wishing to invest their income for the purpose of creating a reserve fund, or for building.

It is for all Seeking a Home or who want to improve their property, or pay off a mortgage or to provide a fund for any other worthy purpose.

Call on or Write M. K. SNYDER, Pullman, Washington

**Electric Cooking Cuts Meat Bills**

The Electric Range makes a wonderful saving over other fuels in meat shrinkage, often as much as a pound on a single roast.

The even heat of an Electric Range gives a uniformity of results before impossible.

You can bake bread evenly without turning it; roast meat without basting; brown cake as even on the bottom as on the top—at the same time obtaining the best of flavored food.
