HUNTING APACHES
BY DWIGHT NORWOOD

Indian fighting is a thing of the past now, but we must remember that it was only about a generation ago that General Custer and his men were surrounded and massacred by redskins. There is an old ordnance sergeant at one of the Atlantic coast forts who was a youngster in the ranks of the regular army in those days and passed a good many years on the plains, where Indian fighting was the order of the day. He tells yarns about his experiences, some of them bloodcurdling, some simply amazing. Here is one of the latter class:

The Apaches were the worst varmints one had to deal with, and we were more afraid of them than any other savages. They were more treacherous, more merciless and practiced more deceptive methods than any other tribe with which I had the honor to exchange shots. When we were hunting them we were more sure that they weren't hunting us. Any man going to a spring for water, dropping out of the ranks to cool off or in any wise going off by himself was liable to be taken in, and so noislessly that the rest of the command wouldn't know anything about it until he was missed and some one would be sent back to find him dead and scalped.

One time when we were after a party of Apaches, not knowing when they would turn up in the middle of the night, or, more likely, just before dawn, we made preparations that would let us know of their coming. Our commander had taken the precaution to bring along some barbed wire fencing, and after getting into camp, before turning in under our blankets, we fenced ourselves in. Of course we didn't expect to keep off the red devils with a wire fence, especially when we weren't helping the latter with lead. All we hoped for was a few moments' delay, long enough, you know, to grab our rifles and get on our feet.

We bivouacked one evening on a hillside so situated that we couldn't very well be taken on the flank, and instead of running the wire around us we stretched it before us, so that any force coming up the hill must pass over it. Though the moon was in the third quarter, the night, being cloudy, was quite dark. The Apaches were so sly that in order to get a warning of their coming we hung all the tin plates, tin cans—anything, in fact, that would rattle on the wire.

I was listening then for all I was worth for the slightest sound that would indicate the presence of an enemy.

I had to take it out in listening, for I couldn't see anything unless it was above the sky line. The moon passed a thin space in the clouds just as I heard a tinkle away down at the other end of the fence. Peering in that direction I saw something white. I didn't wish to make a guy of myself by firing at nothing, and I didn't wish to take any chances with Apaches about it. I heard another tinkle and saw the white thing move. It seemed to be on the outer side of the fence, but in another moment it was on the inside. I had brought my rifle to my shoulder at the first sound, and, seeing that whatever it was had got in behind the fence, I let drive.

I could hear a prolonged rattle of accouterments as the line of sleeping men arose, and their rifles sounded like a modern machine gun. The field officers went hurrying about, and the company officers formed their men. In a few moments they were all standing in line ready for another volley, but the second volley was never fired. The clouds broke away from before the moon so that we could see what was going on before us, and we found there was nothing going on. No sign of an Apache appeared.

The order was given to break ranks, and within ten minutes the men were down on the ground again, most of them snoring loudly enough to keep a sentry from hearing any more tinkling tin plates. I was relieved soon after and joined the chorus.

The next morning our commander called up the guard of the night before and asked us who had fired the warning shot and at what he had fired. I confessed that I was the man and had fired at something white down at the other end of the wire fence.

"Something white?" he exclaimed contemptuously. "Did you ever know a redskin to wear anything white? No Indian, no Apache certainly, would wear anything that could be seen on a dark night."

I was dismissed with no other reprimand than this, if it could be considered a reprimand, and went off to a campfire where my men were cooking breakfast.

"What were you men on guard firing at last night?" asked one of the men.

"Apaches," I said, putting on a bold front. "The moment I fired they skeddaddled down the hill under cover of the darkness."

"How could you see these in the dark?"

This stumped me, but further remark was unnecessary since the mystery was solved by Sergeant Conover. "What he was firing at," he said, "was a boiled shirt of mine that I washed after we bivouacked last night and hung on the wire fence to dry. And just look at it," he added, producing the article; "it's riddled!"

"Serves you right," said I, "for hanging your shirt on a means of defense."

Why grin and bear all these ills when Sloan's Liniment kills pain?

"I have used your Liniment and can say it is fine. I have used it for sore throat, strained shoulder, and it acted like a charm."—Allen Dunn, Route 1, Box 88, Pine Valley, Miss.

"I am a painter and paperhanger by trade, consequently up and down ladders. About two years ago my left knee became lame and sore. It pained me at nights at times till I could not rest, and I was contemplating giving up my trade on account of it when I chanced to think of Sloan's Liniment. I had never tried it before, and I am glad to state that less than one 25c. bottle fixed me up apparently as good as ever."—Charles C. Campbell, Florence, Texas.
