In the Coffee Business Since 1899

We have just installed a big coffee roaster which works with coal instead of gas. The reason we made this change was to get away entirely from any gas odors, while you get more or less roasting with gas.

With the new coal roaster we are putting out roasts far superior to any roasting done by gas.

Our blends speak for themselves. Try any of our coffee and see the difference between fresh roasted and coffee that has been roasted all the way from three to six months before you get to use it.

DOGS ANSWER CALL OF ST. CLOUD'S WHISTLING WELL

St. Cloud Journal-Press: "Lake George's whistling well, a curious freak of nature that is unexplained by the professors at the state university, is again in the limelight. A farmer living immediately adjacent to the well has written to the county officials asking if something cannot be done to make the well stop its peculiar noise. With the coming of the warm days the frost is going out of the ground and the whistling is loud and distinct.

"I bought two dogs this winter to guard the house and to help in herding the cattle," wrote the farmer. "Every time the well whistles they both run over to it and stick their heads down in the hole. I can't keep them around the house at all and they don't help me with the cows."

The letter has been referred to the county attorney.
