POWER FARMING with the FORDSON

The Fordson Tractor is taking care of every power job; it is taking the drudgery out of farm work and solving the labor problem. Power farming with the Fordson reduces the cost of preparing land to almost one half what it would be with horses, and saves a third to a half of the farmer's time. What machinery does for the factory, the Fordson Tractor is accomplishing on the farm—it is increasing production at lower costs and making farm life attractive.

Apply this power farming idea in your threshing. More and more farmers are making themselves independent of unfavorable conditions by using the Fordson Tractor linked up with a light threshing. By seizing the right moment and being able to do the job without waiting and in quick time, crop losses are avoided and profits increased.

The Fordson operates with kerosene. When used on belt work, running at full power at 1,000 R. P. M., the fuel consumption does not exceed 2 3-4 gallons per hour. It will run the

electric light plant, operate the milking machines and straw baler—will take care of every kind of belt work.

The Fordson plows 6 to 8 acres in a 10-hour day, handling two plows with ease in the average soil. It requires an average of only 1 1/2 to 2 gallons of kerosene to the acre.

It is the ideal year-round tractor. It will pay for its fall and winter keep in many ways, such as road work, hauling grain to the elevator, pumping water and moving granaries.
