A Big Mill Doing an Immense Business.

EDITOR DEMOCRAT:—Having business at the south side of the city we notice that the extensive wood-working factory of our enterprising fellow citizen, M. E. Leming, was in full operation, and dropped into see the sights. There are but few of our people that know we have such a factory in our midst. There stands a plant filled with the latest and most approved wood-working machinery, consisting of saws that run through a six foot log with lightning speed, surrounded by carriers, sizing saws, crosscuts, planers, headers, stove cutters, shingle machines, lath cutters, in fact all the necessary machinery to use up every scrap of timber into useful and marketable material.

A log is hardly settled on the saw blocks and the first slab dropped from its huge side when the pieces begin to seek their several destinations. Part of the slab going to the picket saw, some to the lath saw, some to the shingle cutter and so on. Then as the smooth plank drop off they fall on a railway carriage and off they go, some to the planer, some to the stack and some to be bent into staves, heading and fencing; and by the time the heart of the log is cut into heavy bridge timbers the whole is worked up, graded and culled. Some planed, some bound up in first, second and third-class shingles and laths, pickets and staves and stored in cars ready for shipment or neatly stacked in the yard. We timed one monster express log, and in seventeen minutes it had disappeared and a new one rolling up to take its place. There was no bossing, no orders, no talk, a motion of the finger or wave of the hand was responded to with lightning like speed and accuracy. Every operator seemed to know what to do, when to do, and done it with a practiced hand and a quick, intelligent eye. No blunders, no delays, but every branch whirling along with clock-like accuracy.

What does all this mean to our people? It means the maintenance of forty families in our midst, or—taking the usual average of five to the family—the support of about two hundred persons who depend on the brain, the energy and the nerve of that young, active business man who a few years past came and planted his home in our midst to help, with his skill and experience, to build up our city, and to-day his monthly pay rolls foot up over two thousand dollars; or twenty-four thousand dollars a year. All of this money is spent in this city, passes through the hands of our merchants, millers, Physicians, etc.

A total stranger can come amongst us and our business men will raise thousands of dollars to give as a bonus, to help start a hard wood working factory. Here we have got one all in motion, with plenty spare power to run all the presses and turning lathes you want and an experienced young, active man at its head who has proven his worth and trustworthiness. Why not give him the bonus and he will double his working force with it? When will wise, willing men learn to be practically sensible and wise? There seems to be a lack of business forethought that hampers our people and keeps them from helping each other. Here is a saw mill within the city limits that can furnish our builders and others with the very best of lumber, laths and shingles at the lowest prices and less freights. Still, instead of keeping the money at home and encouraging home industry, thereby giving work to our own people, they will send a hundred miles, buy poorer lumber, poorer shingles and cooperage, and pay as much for it as they can get a far superior article at home. Strange, but true. Think of this, builders and coopers, and help those who spend their money in our midst and have their home here.

Notice. I have this day sold my entire stock of furniture and undertaking goods to my sons who will continue the business at the old stand under the firm name of A. Walker & Bro.
