**Facts about the beard**

**How to eliminate hot towels and finger-rubbing in shaving**

Every hair of the beard is coated with a natural oil. And that oil has been an obstacle in shaving.

The ordinary shaving soap or cream fails to cope effectively with this oil. Thus the beard cannot absorb water enough or quickly enough to make the hair cut easily. That is why men have had to use hot towels and rub the beard with the fingers—to force moisture into the beard.

**A better way**

Hot towels make the skin too tender. Finger rubbing means delay.

And with Palmolive Shaving Cream, these methods are not needed. For this is a lather that instantly emulsifies the oil-coating on the beard. Thus the water penetrates the stiffest beard quickly. And each hair is easy to cut.

**Both lather and lotion**

Our cream contains both Palm and Olive oils. So it is a lotion as well as a lather. It gives the face a refreshing feeling of coolness, such as you've never before experienced after shaving.

**Try it free**

Send for a free trial tube. Mark what a wonderful difference when you shave with Palmolive. Note how nicely the razor slips over the face, for this cream lubricates the shave.

See, too, how prolific our cream is. It multiplies itself in lather 250-fold. One-half gram—a mere bit—you will note, suffices for a shave. A single tube supplies 152 shaves. That's something else you've never had before.
