CITY COUNCIL.

Communication from Engineer Regarding Third Street Stone Walks.

Fire Cisterns for the Sixth Ward-City Improvements Ordered, etc.

The following is the substance of the business transacted by the Council last night:

STONE SIDEWALKS ON THIRD STREET.

Mr. W. A. Somers, the city engineer, sent to the city council a communication regarding the putting down stone sidewalks on Third street, accompanied by a communication from the board of public works, recommending the adoption of the Oakland blue stone as the most desirable stone to lay in the sidewalks, and affirming that this stone will give the best satisfaction to the public. In this connection Mr. Somers sent in another communication stating that the work of curbing and paving Third street is started and a majority of the sidewalks are so much laid that it is impossible to relay them in passable condition. He recommends that the council be asked to order the new stone walks as soon as possible, so as to avoid the great inconvenience to the public of tearing up and renewing the old walks, and again tearing down the new ones. The engineer recommends that the walks be laid of single slabs reaching from the curb to the property line, using the blue stone with natural surface three inches thick. This will make the cost of the blue stone \$4 to \$4.50. Each slab should be 27 to 30 ft. long, 18 in. wide, Nininger \$5.70 per running foot of walk, not including cost of any work necessary to support the stone over areas. The engineer says that the Oakland and blue stone have been used but that the Mankato and Nininger stone are preferred. The council wanted to consider the matter further and so laid it over to the next meeting.

WATER IN THE SIXTH WARD.

A communication was read from F. R. Delano and John T. Black, of the fire commissioners, in which they say they have personally examined the localities and the proposed plan for future water supply for the Sixth ward. They give a statement of the water supply in this ward, and say it is very slim. They therefore recommend the construction of six cisterns in that ward of from 800 to 1,000 barrels capacity. The communication was referred to the committee on fire department and the city engineer.
