

A VIEW OF MANAGUA.

LIFE IN NICARAGUA'S BEAUTIFUL LITTLE CAPITAL.

FAMILY OF THE EX-PRESIDENT

Cause of the Revolution and the Methods Adopted to Bring About Peace—Habits of the Central American People and Their Daily Life.

Special Letter to the Globe.

MANAGUA, Nicaragua, June 20.—Managua is beautifully situated on the southern edge of the small lake which bears its name, and is surrounded by mountains which are covered with verdure the year round. Of all the countries I have visited, I have seen no prettier scenery than exists here. There is nothing grand or majestic but such a soft, perfect beauty which completely wins the heart. We find no beauty in the quaint little towns, with their narrow, sandy streets, cactus hedges and white-washed houses.

Instead of dusky señoritas, flashing roguish glances from under the mantilla, one meets the bare-footed, bare-headed Indian girl, with stolid or impudent gaze. Instead of cloaked and sombered cavalier, hiding a dagger beneath the folds of his cape, one encounters "the native" in his Panama hat, and recognizes variously the Spanish-Mexican, or negro type. If he be well-to-do, he is according to his own ideas—attired in the height of fashion; broad sun Derby hat, pointed shoes and a soft shirt and collar, but generally inferior of cuffs and tie. There are some really polished people of good Spanish blood, but the proportion to the whole population is small. In some respects the life in these towns reminds one of Mexico, again of Spain, and then it has an individuality peculiarly its own. The language is quite pure, and it is surprising how many of the inhabitants speak good Spanish. It was our pleasure to see much of it.

STILLWATER NEWS.

Events of Saturday in the City on the St. Croix.

One of the most enjoyable events of the past week was the banquet and reunion of the Last Men's club, an organization composed of survivors of Company B, of the First Minnesota. The first meeting of the club was held July 21, 1885, and at that time the membership numbered twenty-five. Four of the original members have died, and many are absent from the city, and this account for the small attendance at Friday evening's banquet. Those present were: Myron Shepard, Adam Mary, A. C. Hospes, Samuel Bloomer, E. L. McKusick, John S. May, Arthur and Charles Peterson, of Stillwater; Joseph A. Tenner, of St. Paul; George A. McNeal, of Minneapolis; and James Gruesen, of Dunton, Wis. The bottle of wine presented to the club, which the last survivor will sip in silence, occupied a prominent position on the table, and the close of the gathering was again placed in the vault in one of the local banks. The next reunion will be held at the Sawyer house in this city, July 23, 1891.

The date of meeting was changed because the 21st comes on Saturday next year, and many of the members of the club would be unable to be present on that day.

Some months ago the St. Louis Car company applied for the appointment of another receiver for the Stillwater Electric Street Railway company, and the application was denied by the district court. The order of the district court was reversed, and Judge Williston has appointed W. C. Chamberlain receiver. This leaves the street railway in the hands of two receivers.

The last week of work at the boom was one of the most successful in the history of the concern, 23,000,000 feet of logs being run out. On one day the output reached 4,150,000 feet, lacking 500,000 feet of the largest output of any day at the boom. The output now reaches 200,000,000 feet for the season.

The Stillwater and the Y and B, of Minneapolis, will play a game of ball at Athletic park in this city today for the gate receipts and a side purse of \$100. These will be evenly matched, and today's game will be the most interesting one of the season.

All who will participate in the Kilmee race will be given here under the direction of Prof. Speedy some time in August will meet at the opera house some evening this week, in brief drilling. The cast will number about 250.

There was a mass of sweltering humanity in this city yesterday, the heat being almost stifling all day. A warm wind was blowing, and made the day very uncomfortable. Thermometers registered 92 deg in the shade.

The New York and St. Paul yesterday with a raft of logs consigned to the Empire Lumber company and Laird, Norton & Co., Winoona. The Denckmann took out a raft for the Rock Island Lumber company.

Mrs. C. H. Otter, of Windsor, Ont., and Mrs. W. G. Otter, of St. Paul, were guests of Mrs. Elmer McKelver on Friday.

The Stillwater Turnverein will give an excursion to Redwing and return today on the steamer Ewing and large.

Misses Mary and Maggie Lyman left Wednesday for Springfield, Ill., where they will visit relatives.

Alex. Richard left during the week on an Eastern trip. Before returning he will visit in Boston and Chicago.

Mr. and Mrs. Chester McKusick left for Duluth a few days ago, where they expect to reside in the future.

Mr. and Mrs. L. A. Gotschall and children are spending a few days at the world's fair.

Mrs. Dr. Thomas, of Washington, D. C., is spending a few days with Mrs. F. Rice.

Miss Jennie Goddard, of Milwaukee, was a guest of Miss Minnie Jones yesterday.

George Buffington, of Minneapolis, was a guest of E. D. Bullington on Friday.

Jake Collier and wife are back after a two weeks' sojourn at Chicago lakes.

Miss Josie Westley, of Minnesota, spent the week with Stillwater friends.

Miss Lulu Burlington left Monday evening for Danielsonville, Conn.

Rev. J. M. Bull has returned from a month's absence in Europe.

Warren Munsell and Dr. F. A. Lenox spent the week in Chicago.

D. A. Blakeley and wife are spending a week in Chicago.

Mr. and Mrs. C. F. Kilgore have returned to Chicago.

Heartless.
Mr. Chumpley—Dr. Squillaby doesn't know enough to cure a monkey.

FROM HOBBY TO BIKE.

EVOLUTION OF THE WHEEL FROM A TOY FOR CHILDREN.

THE OLD FRENCH MACHINES.

Popular Interest Aroused in Consequence of Recent Improvements and Attractive Races—The Bicycle as a Means of Conveyance.

THE ANCIENT HOBBY HORSE.

THE first chapter in the history of miniature vehicles must be devoted to a study of the little mechanical hobby horse, which is well known in France as the *dada*. At first sight it seems strange that the modern velocipede should be in any way related to this child's toy, which is set in motion by cranks that are placed in the horse's head and are moved by the hands. The connection, however, between the two machines is clear and is but another proof that the history of the velocipede is inseparably connected with the history of velocimania. Of this there are abundant traces in the numerous inventions which have been

made since the most remote time. It is alleged that the Egyptians and the Latins, in engraving upon their obelisks images of persons mounted on two-wheeled vehicles, had at least some idea of the velocipede.

M. Baudry de Saunier, an authority on this subject, has tried hard to find out from hieroglyphs and from the inscriptions of all the old cyclists the various

stages through which the machine has passed, and he has discovered traces of it as far back as the fifteenth century.

History of the Wheel.
Other traces appear in the sixteenth century, and in the seventeenth century an English chronicler reports that a

desultory travel through a part of China on a machine with three wheels. Until 1790, however, there was no evidence that cyclism was practiced in real earnest. At that date there appeared for the first time the "celerifere," designed by M. de Sivrac. This machine

consisted of two wheels, moving on the same axis and fixed below a wooden beam, which was fantastically carved and otherwise adorned. On this the rider mounted in such a manner that his feet touched the ground and were thus able to give

an impulse to the entire machine which Baron Drais perfected some time afterward, and to which in consequence the name *Draisienne* had been given. Before this time, however, the prototype of our graceful bicycle was known by another name, that of "velocitero," which, by the way, was the title of a
