

HIS CHOSEN WORK.

WARREN UPHAM, A GENTLEMAN WELL FITTED FOR HIS NEW POSITION.

BRINGS LIFE EXPERIENCE

TO THE OFFICE OF SECRETARY AND LIBRARIAN OF THE HISTORICAL SOCIETY.

TAKES FORMAL CHARGE JAN. 1.

But Will Reach the City in a Few Days and Begin Active Work.

Warren Upham, who has been elected secretary and librarian of the Minnesota Historical Society, is expected in St. Paul in a few days to look into matters connected with the position, although he will probably not take formal charge of the work until Jan. 1, 1896.

WARREN UPHAM.

N. H. lived and worked on the home farm, attending the district school and one term in the academy at Mount Vernon, N. H., to the age of seventeen; then entered Dartmouth college, Hanover, N. H., taking the usual classical course of four years, meanwhile by work several hours daily earning nearly enough to meet all the expenses of the college course. He graduated in 1871. During the years 1872 to 1874 he was engaged in civil engineering for a system of water works in Concord, N. H., and for railroad surveys in the region of the White mountains. From 1874 to 1878 he was assistant on the geological survey of New Hampshire, with Prof. Charles H. Hitchcock, state geologist. He received the usual classical course of four years, meanwhile by work several hours daily earning nearly enough to meet all the expenses of the college course. He graduated in 1871. During the years 1872 to 1874 he was engaged in civil engineering for a system of water works in Concord, N. H., and for railroad surveys in the region of the White mountains. From 1874 to 1878 he was assistant on the geological survey of New Hampshire, with Prof. Charles H. Hitchcock, state geologist. In three seasons of field work, 1879, 1880 and 1881, he traveled 11,000 miles, driving with horse about twenty-five miles daily, and thus thoroughly examining fifty of the total eighty counties of Minnesota. The portion of the state thus explored by him and described in the annual reports and volumes 1 and 2 of the final reports of this survey is the great prairie region in the east part of North Dakota, and Minneapolis west to the state boundary and northwest along the Red river valley to the Manitoba line.

Having thus begun the examination of the area of the glacial Lake Agassiz, which occupied the basin of the Red river and of Lake Winnipeg, the further exploration of this great lacustrine area was carried forward by him during the years 1885 to 1892 for the United States geological survey, working mainly in the east part of North Dakota, but also spending one summer (of 1887) in observations of the large southwestern prairie part of Manitoba. This work north of the international boundary was done jointly for the United States and Canadian geological surveys. Again, during the years of 1893 and 1894, he was an assistant with Prof. N. H. Winchell on the Minnesota geological survey, with field work in Aitkin and Cass counties and about Duluth, and north to Vermilion lake.

Last spring he accepted the new work in Cleveland, Ohio, for the Western Reserve Historical society. In charge of its large archaeological museum and library of 10,000 volumes and as many pamphlets, receiving here experience which is directly in line with the duties to be entered on for the Minnesota Historical Society.

As results of his work in geology, he has published chapters on the White mountains, and on the river systems of New Hampshire in Volume I of the "Geology of N. H." 1874; and some 200 pages of detailed reports of surveys of the glacial and modified drift of that state in Volume III of the same report, 1878. Similarly, the reports of his observations and studies in Minnesota are published in the eighth, ninth, eleventh, twelfth, thirteenth, twenty-second and twenty-third Annual Reports of the Minnesota Geological Survey; and more fully, with thirty maps, in ten chapters of Volume I, "Geology of Minnesota," 1884, and twenty chapters of its Volume II, 1888. In these two volumes of his final reports of this survey, his writing makes about 600 pages. For the United States geological survey, he has published two bulletins, one in 1887 of 81 pages, and Delta of Lake Agassiz, and the second in 1891, tabulating in 220 pages the altitudes determined by railroad surveys from Lake Superior to the Rocky mountains, comprising Minnesota, the Dakotas, nearly all of Montana, also the Northern Pacific system to the Pacific coast, the Canadian Pacific railway system from Lake Superior to the Pacific, also much of Northern Wisconsin, Northern Iowa and Northern Nebraska. These are respectively Nos. 20 and 22 in the series of bulletins of the United States geological survey. The exploration of the part of Lake Agassiz in Manitoba was published in the Annual Report of the Geological

Survey of Canada for 1888-89, Volume IV., new series, as its part E, having 116 pages, with sections and two maps. Monogram XXV., of the United States geological survey, entitled "The Glacial Lake Agassiz," still more fully presenting his studies of that ancient lake and of the ice age, is in press, all its proofs to the end of the index having been read the past summer. This is a quarto volume of 600 pages, with 38 plates, mostly maps, with a few views from photographs, and having 35 figures in the text.

In botany the results of Mr. Upham's observations during travel for the Minnesota geological survey are published in the twelfth annual report, Minnesota, entitled "Catalogue of the Flora of Minnesota," 1893, part with a map showing the areas respectively of forest and prairie. Besides the publications of state and United States surveys, he continued many papers, since 1878, to the proceedings of the American Association for the Advancement of Science, the American Journal of Science, the American Naturalist, the American Geologist (published in Minneapolis ever since its beginning in 1888), in Appalachia, the journal of the Appalachian Mountain Club, Boston, Mass., in the proceedings of the Boston Society of Natural History, the recently founded Journal of Geology, of the University of Chicago, the Victoria Institute of London, the Geologists' Magazine of London, the Popular Science Monthly (September, 1891, and December, 1893), etc.

During several years, as at present,

he has been an associate editor of the American Geologist and the Geologists' Magazine. His membership in scientific societies comprises the American Association for Advancement of Science, the Geological Society of America, the Boston Society of Natural History, the American Academy of Arts and Sciences, Boston, Mass., the National Geographic Society, Washington, D. C., the Victoria Institute, London, etc.

Mr. Upham married in 1885 Miss Adie M. Bixby, of Aurora, Minn. Their only child, a daughter, was born and died in September, 1887.

ST. PAUL PARK.

The second of the series of dancing parties given by H. O. Sproat, will take place Friday evening, the 25th, and will be very large and brilliant gathering. There will be several new features introduced and there will be a delegation from St. Paul, Stillwater and Hastings.
