

Prehistoric Skeleton Found.

Professor Loveberry Makes an Important Scientific Discovery.

Special Correspondence of the Globe.

O. O. LUMBUS, O., June 10.—The most remarkable find of prehistoric skeletons made for many years was accomplished by Prof. Clarence Loveberry a few days ago near Ringold, Pickaway county. The discovery of the skeletons establishes the fact that the mound builders practiced cremation and erected stone crematories to accomplish the desired result.

excavation about twenty feet square. At the bottom of the mound were found eight skeletons, the skeletons being those of seven adults and one child. With the child's skeleton we found a handsome bone awl and a small piece of graphite. A piece of pottery and some flint knives and disks were found with the other bones.

leaving the earth mound, two of our party started to work on the circle, one on the west side and one on the south. After some digging on the south side, a layer of large black stones was removed below which the workmen found some half dozen concretions which are various sized round-shaped solid stone-like formations. By placing two halves of these concretions together, a dish-shaped article was formed, resembling an inverted dish over another. I believe these were intended as receptacles for small articles of value or sacredness which could be thus hidden and preserved.

The entire exploring force then went to work on the south part of the circle. After uncovering a large deposit of geological and archaeological specimens to which I will refer later, we uncovered a box two feet long by six inches wide, formed of large flat stones. Within this box were the remains of a cremated skeleton, some

IMPORTANT SCIENTIFIC FIND.

burnt bones and perhaps a shovel full of ashes—all that remained of what must have been a great chief among the mound builders. As Dr. Orton laughingly said to me, he must have been a great prehistoric geologist. A remarkable fact which caught my attention at once was that the earth in and about the box showed no signs whatever of any action by fire from which I am forced to conclude that the body was cremated before burial. This conclusion is well borne out by further exploration of what appears to be a large stone crematory within the circle on the west side. I found this to be made up of burnt stones. I looked in vain for a wall or traces of some system regarding the laying of the stone, but I found none. The crematory was 12 feet long, 9 feet wide, 9 feet deep on the east side, and 5 feet deep on the west side. It looked to me as if the mound builders had given the crematory this slope in order to make it draw well, and undoubtedly it was fired from the east end as that was near the center of the mound while the west end came up near the wall.

The crematory was formed of sandstone, limestone, quartz, granite, etc., and there were found within it many glacial boulders commonly called "nigger heads." All the stones had evidently been carried to the place as none of them would have proved an excessive burden for a man. They were burnt all the same colors, black, yellow, red and gray. Some were

FINANCIAL.

Call money, New York, 1/16 1/4; Bar silver, New York, 60 1/2.

CHICAGO, June 19.—Business was very dull today on the board of trade, and prices all suffered from the lack of interest.

Wheat—The market was quiet, and prices declined 1/4c, corn unchanged for July, and 1/4c lower for September. Oats closed about unchanged and provisions closed at 2 1/2 to 7 1/2c decline. In what Liverpool was again the controlling factor at the opening. Futures quoted 1/4c lower, there than closed Friday, and the disappointing weakness of the English market resulted in free offerings here of both July and September. The close of July yesterday was 68 1/2c, and at that time prices were from 68c to 69c. It kept yielding slowly for a few minutes until it had sold down to 68 1/2c. It was helped down by some selling on account of St. Louis reporting a carload of new wheat in there from Charleston. The heavy wheat which carried the market back to about the original prices of the opening was caused by a sale of 50,000 bu. of No. 2 spring wheat for direct immediate shipment to Chicago to Liverpool. Chicago received 15 carloads of wheat, Minneapolis 11 and Duluth 23, against 228 last week, and 507 the corresponding day of the previous week. The week's shipments of wheat and flour from both coasts were equal to 2,577,000 bu. against 1,836,000 bu. the week before, and 3,029,000 bu. the corresponding week of last year. Argentine did not ship any wheat to Europe this week. The day's clearances from Atlantic ports were equal to 342,000 bu. The trading always dull on a half holiday, was duller than usual today, about all the business transacted being confined to the first hour. July was selling at 68 1/2c at the close.

Corn was weak for September and rather steady in July. July opened about 1/4c lower at 24 1/2c, advanced to 25 1/2c, and closed at 25 1/2c. Oats were almost without fluctuation. July opened unchanged at 18 1/2c, and held 18 1/2c until the closing. The closing price. There was little life in the trading in provisions. July pork closed 7 1/2c lower at 43 1/2c, and 2 1/2c higher at 43 1/2c. Estimates: Wheat, 5 cars, corn, 430 cars, 275 cars, hogs, 100 cars, 200 cars.

The leading futures ranged as follows:
