COMMISSION APPOINTED TO INVESTIGATE THE NATURE OF DISEASE REPORTS

OPINION OF THE EXPERTS

It Is That the Dreaded Disease May Be Stamped Out by Disinfection—Some Former Theories Are Made to Appear Unreliable—Cure May Ultimately Be Produced by Scientific Men.

WASHINGTON, Aug. 18.—The report of the commission appointed by the president in 1897 for the marine hospital service to investigate the nature of yellow fever was today made public by Surgeon General Wyman.

First—That the micro-organism discovered by Prof. Giuseppe Sanarelli, of the University of Palermo, Italy, and by him named "bacillus lateroides," is the cause of yellow fever.

Second—That yellow fever is naturally infectious to certain animals, the species varying from the species that in some rodents local infection is very quickly followed by the death of the animal.

Third—That the infection takes place by way of the respiratory tract, the primary focus in this respect giving rise to the earlier manifestations of the disease.

Fourth—That in many cases of the disease, probably a majority, the primary focus is not the respiratory tract, but an infection or colonization in the lungs is secondary colonization of this organism in the blood of the patient.

Fifth—That there is no evidence to support the theory advanced by Prof. Zanarelli that this disease is primarily a septicemia, inasmuch as cases of the disease in which the bacillus lateroides cannot be found in the blood or organs in which it has been supposed to exist.

Sixth—That there exists a causal relationship between the bacillus "X" of Sternberg and this highly infectious disease, and that the bacillus "X" is frequently found in the intestinal contents of normal animals and of man.

Seventh—That so far as your commission is aware the bacillus lateroides has never been found in any body, other than one infected with yellow fever, and that the same may be the cultural similarities between this and other micro-organisms is characterized by a specificity which is distinctive.

Eighth—That the bacillus lateroides is very susceptible to the influences injurious to bacterial life, and that its ready control by the processes of disinfection, chemical and mechanical, is assured.

Ninth—That the bacillus lateroides produces in vitro as well as in vita, a toxin of marked potency, and that from our present knowledge, it is not reasonable possibility of the ultimate production of an anti-serum more potent than that of Prof. Zanarelli.

Gen. Mercier next referred to Picquart's statement that the D'Avignon document was communicated to the court-martial of 1894. He said: "I deny positively. The only documents communicated to the court-martial were the Dreyfus trial documents, and the report of the French attaché in regard to the shooting. There he was made what abrupt in handling the friends of the wounded lawyer who sought to get near the conduct of the trial.

M. Demange's cross-examination compelled Gen. Mercier somewhat reluctantly to enumerate the secret documents submitted to the first court-martial. Among them was the "cette canaille de Picquart" which had been the subject of a document, Mercier replied: "It was supplied for my personal use."

Col. Picquart's speech of five hours was delivered without notes or any leading question from M. Demange, and in the most lucid and convincing manner.

It was with a force that ordinary civil court would certainly have secured acquittal. But Picquart, himself, is the object of so much hatred and prejudice at the hands of all the general staff and the bulk of the officers for his integrity and utter disregard of military discipline in his search for the truth.

SECRETARY OF WAR ROOT BUSILY ENGAGED IN SELECTING OFFICERS FOR THE ARMY

NEEDED IN NEW REGIMENTS

Plan is to Hurry the Organization of the Troops to Be Sent to the Philippines, in Order That All May Reach There in Time to Assist in Crushing the Filipino Rebellion and Ending the War.

WASHINGTON, Aug. 18.—Secretary Root was busily engaged the greater part of the day in selecting officers to fill the names that have been submitted with recommendations for appointment, and considering their efficiency records during the Spanish war.

The Dreyfusites greatly fear for Picquart's life. The stalwart among them now guard him. He looks a man with an unbroken spirit and no hesitations been unyielding, unless in giving that peace of soul that passeth understanding.

Preparations continue actively in the matter of arranging for the speedy transportation of the troops to the Philippines. The quartermaster's department has been considering the advisability of chartering more transports on the Pacific coast.

It is possible to send nearly all the organizations now formed by Sept. 25, instead of two weeks later, which was the schedule first shown Secretary Root. The transports Logan and Thomas are now being fitted up on the Atlantic coast, and it is expected they will be ready to sail by the middle of October, and will take three regiments via the Suez canal.

At the latest calculation, it is believed to be possible to land all the new regiments in the Philippines by Dec. 1, or very soon after that date. Seven of the lieutenant colonels named yesterday are now serving in the Philippines. They will remain there and await the arrival of their regiments.

While it may not be necessary to use all the troops in the Philippines, it is understood to be the plan of Secretary Root to have a sufficient number of troops to hold the insurgents at every point, and to garrison and hold the places that are to be taken, and thus insure a safe line of communication.

The map which has been prepared for Secretary Root, showing the location of the troops in the Philippines, has been completed, and is also accompanied by a statement explaining how this force is divided under the general commanding officer.

The first division, commanded by Gen. Lawton, is south of Manila, and consists of the following troops: Fourth, Thirtieth, Fourteenth, Twenty-fourth, Twenty-fifth and Twenty-sixth regiments of infantry; the First Washington, First Second, Fourth, Twenty-fourth, Twenty-fifth, Twenty-sixth, Twenty-seventh, Twenty-eighth, Twenty-ninth, Thirtieth, Thirty-first, Thirty-second, Thirty-third, Thirty-fourth, Thirty-fifth, Thirty-sixth, Thirty-seventh, Thirty-eighth, Thirty-ninth, and Fortieth regiments of infantry.

The provost guard of Manila consists of the Twentieth infantry and eight foot battalions of the First, Second, Third, Fourth, Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Eleventh, Twelfth, Thirteenth, Fourteenth, Fifteenth, Sixteenth, Seventeenth, Eighteenth, Nineteenth, Twentieth, Twenty-first, Twenty-second, Twenty-third, Twenty-fourth, Twenty-fifth, Twenty-sixth, Twenty-seventh, Twenty-eighth, Twenty-ninth, and Thirtieth regiments of infantry.

The garrison in the other islands are: Panay—Eighteenth infantry, First Tennessee; Battery G, Sixth artillery, Negroes—Sixth infantry, Cuba—One battalion Twenty-third infantry, Jolo—Two battalions Twenty-third infantry.
