

IRELAND NOT HOSTILE

ARCHBISHOP OF ST. PAUL DENIES WASHINGTON STORY ALLEGING COLDNESS TOWARD MCKINLEY

CALLS IT A LOT OF NONSENSE

Washington Gossip Attributes to the Archbishop a Request That the Outraging of Women and Desecration of Churches by Soldiers Be Stopped, Even if Ots' Official Head Had to Drop.

"It's a lot of nonsense," said Archbishop Ireland to the Globe yesterday, referring to a Washington dispatch which appeared in the Chicago Chronicle of yesterday morning to the effect that the archbishop had accused President McKinley of failing to fulfill assurances given him, and intimating that the assurances which had not been fulfilled were that the desecration of Catholic churches and abuse of women by American soldiers in the Philippines would be stopped.

The Chronicle dispatch said: Gossip is busy with a story to the effect that Archbishop Ireland and President McKinley are at odds. The story, as rumor tells it, is as follows:

Archbishop Ireland on his return from Europe stopped at Washington a few days. Contrary to his custom, he did not call at the White House. A friend of the president called on the archbishop and asked him to assist in the Chicago Chronicle of yesterday morning to the effect that the archbishop had accused President McKinley of failing to fulfill assurances given him, and intimating that the assurances which had not been fulfilled were that the desecration of Catholic churches and abuse of women by American soldiers in the Philippines would be stopped.

The sternness of the prelate is described as disconcerting to the president. All the archbishop has asked is that desecration of churches and abuse of women by American soldiers in the Philippines shall cease, and that it is necessary to supersede Ots' venting effects of the breeze from whatever quarter it might be blowing.

BATTLE WITH YAQUI.

Over Eighty Indians Said to Have Been Killed by Mexicans.

LOS ANGELES, Cal., Sept. 24.—Official reports of two battles between Mexicans and Yaquis have just been received here. Gen. Luis Torres has declared the campaign suspended until October, but the Yaquis were not consulted on that point. Lorenzo Torres also appears to have made different arrangements. On Sept. 14 Lorenzo Torres crossed the river to Vicam, a town supposed to have been captured by Luis Torres in August, and found the Indians retreating from the open field and a running fight ensued. The report says the Indians were dispersed and nine killed, including the chief, Comandante Lieut. Marvo, of the Eleventh battalion, one of the best officers on the Mexican side.

On Sept. 18 the forces under Col. Hernandez, number not stated, encountered 1,000 Indians near Lake Zaquesa, a small lagoon between Torin and Potam. The Indians retired from the open field and sought cover in thick woods, where the combat raged for more than two hours, beginning at 6 o'clock in the morning. The report says the Indians were dispersed and nine killed, including the chief, Comandante Lieut. Marvo, of the Eleventh battalion, one of the best officers on the Mexican side.

FOUND A FORTUNE.

Kansas Widow Pleaseth That She Examined Old Letters.

WICHITA, Kan., Sept. 24.—Mrs. Julia Benhard, a widow living here, in looking over some old letters, found a deposit certificate for \$10,000 which her brother, W. L. Richardson, had placed in the Bank of Trenton, Trenton, Tenn., by her credit, Jan. 23, 1853. Young Richardson, when President Lincoln issued his first call for troops, enlisted in the Twenty-second Illinois regiment of infantry. His father had just died, leaving his children \$10,000 in cash. Richardson had his money sewed up inside his uniform. In January, 1863, he was detailed with a squad of men to do skirmish work and he deposited his money, \$10,000, in the United States Bank of Trenton to the credit of his sister, then Julia Ann Richardson. He was wounded in February and sent home, where he died. He gave the check to his sister and she put it away.

After the funeral the deposit check could not be found. Miss Richardson became Mrs. Benhard. Her husband died three years ago and the fortune of the family long since disappeared. The Bank of Trenton is no longer in existence, but Mrs. Benhard has employed attorneys here to bring suit against the stockholders, several of whom are still living, for \$10,000 and interest at 6 per cent for thirty-five years, amounting in all to \$35,000.

SNAKES FOR CONSUMPTION.

North Carolina Natives Have a Strange Cure for the Malaria.

COLUMBIA, S. C., Sept. 24.—Prof. V. T. Lander, of Williamston Female college, has just returned from a bicycle trip through the wildest mountain region of Western North Carolina, and reports that the natives up in Transylvania county have found, or believe they have found, a cure for consumption. Whether the remedy is worse than the disease is a matter of opinion. "When the president's emissary then ventured the suggestion that Mr. McKinley would soon be in St. Paul to review returning troops, he said he had not kept faith. I am tired of hearing promises and not seeing them fulfilled."

The president's emissary then ventured the suggestion that Mr. McKinley would soon be in St. Paul to review returning troops, he said he had not kept faith. I am tired of hearing promises and not seeing them fulfilled."

Through the enterprise of Mr. Thomas Beecham, proprietor of the world-renowned Beecham's Pills, Photo-fotos of public buildings, natural scenery, etc., of the British Isles may now be obtained for the nominal price of 5 cents from the International News Co., Duane street, New York city.

HOBBART VERY ILL.

May Not Be Able to Preside Over the Senate Session.

NEW YORK, Sept. 24.—The Press will tomorrow say: It is possible that Vice President Hobart may be unable to be president of the next session of the United States senate. More than that it is now recognized as a serious probability.

TYPE OF DAIRY COW

WHAT SHE SHOULD BE AS FIGURED BY A TENNESSEE PROFESSOR

DROUTH AFFECTS DAIRIES

Product of the Country at Large Reported to Be Reduced. With a Prospective Advance Natural in the Case of Various Dairy Products—A Holstein-Jersey Experiment and What It Proved.

A. M. Soule, of the University of Tennessee, has an interesting article in the last issue of the Country Gentleman on the "Conformation of the Dairy Cow."

First of all we must consider the cow as a machine for the economic production of milk and butter. And she varies for those two purposes. If you find a cow that gives 5,000 pounds of milk and yields 300 pounds of butter, you have one well adapted for that specialty. On the other hand, if she gives 8,000 pounds of milk making 200 pounds of butter, she will prove more remunerative for the first consideration.

Concerning with the head, we have the poll, the eye and the dish, three points that should receive special attention in a dairy cow. Our arguments with regard to these points are based on observation—not on my own personal observation alone, but on the observation of those who have had wide experience; and we find, for example, that a cow that has the poll, or point between the horns, wide, is generally a good milker. Now, we assign as a reason for this the fact that it is an indication of nervous energy. When you see a man of high, broad forehead, you expect him to be a brainy man. We desire and seek the same thing in a cow, for the reason that milk is the direct product of nervous energy. We want every point that indicates high nervous energy strongly developed, and a very large brain indicates a well nourished nervous system.

Next look at the eye. Probably the eye is one of the best indicators of nervous energy, or character, that you can find anywhere. When you meet a man who you do not like, you condemn him probably as much for his eyes as any other feature of his face. The eyes seem to show the soul. The same thing is displayed in the cow. We look for those things that indicate good temper, or, we might say, for pleasing features. We look for those features that are attractive. You will find the eye of the Jersey cow probably the most highly cultured eye in the dairy world. A large, limpid, clear, placid eye—it gives you the idea at once of a gentle, kindly disposition, and at the same time of a strong, vigorous nervous temperament.

Following the eye comes the dish of the face. The dish is not due to the curvature of the nasal bone so much as to the prominence of the eye and the brain. We count the dish a good point for that reason.

The next point to consider is the neck. The neck of a good dairy cow will be longer than that of a beef animal. In the dairy cow you want a rather loose-joined animal, with a long neck and a loosely wedged body. In the steer you look for a short body, and a compact, thick neck. For two reasons we do not want that type in the dairy cow. When you find a heavy, short, thick neck, you have as a rule a tendency to meat production; whereas the opposite tendency would naturally be sought. Second, animals require a certain quantity of food for maintenance; all over that produces milk, fat or energy, as the case may be.

In a dairy animal that has both tendencies, instead of all the surplus food material going to the production of milk, it is divided between two aims. Hence, that portion of the body containing the digestive and secretory organs should be tremendously large, wide and deep to give play to their respective functions. In general, then, the outline of the dairy cow, as viewed from the side, would be as follows: First, the neck is narrow and long, the shoulder point is rather prominent, the belly is deep, broad and convex, the flanks somewhat contracted, the hocks wide apart, and the rump broad. In a beef animal you will find that from the shoulder to the rump is almost a straight line when viewed from the side.

The following article, in the Indiana Farmer, is from the pen of E. B. Towler. Not often has there been a drouth so widespread and severe as during the present season. The results of this continued drouth are becoming apparent in the lessening yield of dairy products, and advance in prices for same. This should naturally be expected, and will most likely continue during the remainder of the season. Of course, we shall expect to see a relief in the fall, but it will be some time before a difference in the growth of feeds, but a supply of water will be particularly acceptable.

Now, at a time when prices are favorable for farmers, and particularly dairymen, the yield of milk has gone down from a fourth to a half on the average. There will, of course, be a few exceptions to this where abundant provision has been made for cattle feed when the pastures fall, but a more than usual amount will be needed, and it is to be feared that many farmers will fall of having sufficient for properly supplying so great a deficiency. Those that are able to do so may consider themselves very fortunate.

There should be a lesson learned from this year's experience, and that is the importance of making abundant provision for the wants of the dairy. When this is done there will be something to rely on, as it is wanted each year, and most so when an extraordinary pinch comes, as it has this season.

After four years' experience in crossing Holsteins and Jerseys, I have, says F. P. Wells, of Vermont, in the American Agriculturist, fifteen cross-bred heifers, a large, rangy form, with lean quarters, large neck and low head; quality below that of either parent; milk of poor quality and medium in quantity.

Another correspondent to the Agriculturist tells quite a different story: "Six years ago," says he, "I selected a Holstein bull of exceedingly yellow, rich skin, from a good sire, and crossed him with a Jersey cow with a strong constitution, fully developed udder, good large teats, from a good butter strain. My first heifer from the above cross produced all I desired in color. The heifer had a large udder and teats, and at second calf gave an average five gallons of milk per day. Her milk tested 53 per cent, but she lacked zest. I bred her to another Holstein bull, and she had a better calf. This young cow has the size and combination desired, and in color, with the white-mark of the Holstein, she plainly shows the Jersey. I

"I want a good soap for washing the clothes; they wear out too fast, and I believe the damage is done in the laundry."

"Let me send you a box of Ivory Soap. We know it is pure, and will not injure anything. Many of our customers will not have any other for their laundry work."

The box was sent, and one more family uses no other. Try it for one week in your laundry, and ask your laundress what she thinks of it.

"LABOR'S FIELD"

There were seven initiations and three members reinstated at the meeting of the Ironworkers' union at Assembly halls Saturday evening. Ten applications were handed in and referred to the proper committee for investigation. A committee of five was appointed to go to Minneapolis Monday evening to meet M. J. Kough, second vice president of the international union. Mr. Kough is in the Twin Cities at the invitation of No. 175 of Minneapolis, and will assist the union in raising its membership. A committee was appointed to visit the different shops of the city to see that all members of the local union get a copy of the Ironworkers' journal. The official proceedings of the international convention held at Indianapolis were received. James Buckley, of the Minneapolis union, was present and made a few approving remarks. A committee of five was appointed by the chair to secure tin pans, etc., for the purpose of charitable D. Murphy and bride. Mr. Murphy was appointed on five different committees at the meeting held Saturday, the chair contending that he would have more time to attend to committee work here than when he lived in the state of single blessedness. Receipts, \$25.00; no expenses.

Brewery Workers' Election.

The brewery workers' union met at Assembly halls Saturday evening. There was a good attendance. Five applications were received and referred to the investigating committee with instructions to report at the next session. The principal business transacted was the election of officers, which resulted as follows: President, Charles Dill; vice president, William Schuler; financial secretary, Fred Lutz; recording secretary, Henry Dase; treasurer, Godfrey Daniels; doorkeeper, Tony Godrich; delegates to trades and labor assembly, Gus Brown and Leonard Krich. The committee will make arrangements for the annual dance to be given further time. Receipts, \$25.50; expenditures, \$2.

Coenmakers' Union.

At the meeting of the coenmakers' union at Assembly halls Saturday evening, Charles O. Hill was elected temporary chairman. J. F. Krieger, organizer for the State Federation of Labor, was selected secretary pro tem, and Wilhelm Schultz treasurer. A committee of five was chosen to notify absentees to be present at the next meeting. The committee consists of William Schultz, Louis Carlson and Michael Connolly. The next meeting of the union will be held on Oct. 7. The following new members signed the charter: Henry Brunhart, A. Brunner, Fred Knappe and Tom Rooney. The next meeting will be held Friday evening. Receipts, \$21.50.

Bakers Will Dance.

There was one application received at the meeting held by the local bakers' union at Assembly halls Saturday evening. It was decided to have a dance at the hall Saturday evening, Oct. 7. There will be a grand cake walk, with prizes amounting to \$12 for the winners. John Paar, F. Gundlach, E. Nyhus, E. Kockel, P. Kusche, P. Bucks, R. Berris, T. Pralwitz, C. Holz, C. Bach, M. Johnson, W. Kohlmannsberger, O. Bahner, P. Schaber and W. Doppler were selected as a committee to make all arrangements. The Citizens' Military orchestra will provide the music. Receipts, \$24; disbursements, \$22.

Gold Seal Fruit Jar Rings.

Are wider and thicker than cheap rings, and make the jar air-tight, and are made of a superior quality of rubber that does not rot the fruit. Price, 10 cents a dozen, one dozen in an envelope. If your dealer does not send them send to Goodwin Rubber Co., 32-32 East Seventh street, St. Paul.

FREAKS OF ARCHITECTURE.

A Tornado-Proof House Which Acts Like a Weather Vane.

A New York gentleman invented, in 1880, a tornado-proof house, which was to revolve automatically in self-defense, and which could be utilized either as a residence or as a place of refuge during a storm. The structure was built with wedge-shaped points at either end like the bow of a ship, and was mounted on wheels which moved on a circular track. A large, strong wing or vane projected from one end of the house and was intended to act under the influence of a high wind, as a kind of weathercock and wheel the building around on a pivot so as to present its sharpened edge to the

"LABOR'S FIELD"

blast. An appropriate apparatus underneath the house provided for holding it stiffly in position except under the action of a tornado; but the originator of this brilliant contrivance apparently was considerably astonished by its rapidity of circumrotation. However, the hopeful inventor adds to his description of the structure a suggestion that it might be peculiarly adapted for use as a hospital, since it could be turned on its wheels by mechanical forces so as to present the sick ward to the sunshine through the length of the day, or to the ventilating effects of the breeze from whatever quarter it might be blowing. A private residence which could be turned so as to follow the sun and cause its purifying rays to shine into every apartment successively is a magnificent luxury which commends itself to every health-loving millionaire, but, as only the minority possesses a million, the patent will, no doubt, expire unused.

Laboratory Diamonds.

Too Small and Too Costly to Rival the Natural Gems.

New Orleans Times-Democrat. Louis Rene, of Lyons, France, was in the city on his way east after a sojourn in Southern California. Mr. Rene is a chemist of note, and has charge at Lyons of the laboratory of one of the largest dyeing establishments in the world. Last year he attracted considerable attention in scientific circles by a series of remarkable experiments in the manufacture of diamonds, and several of the gems which he produced artificially were exhibited before the Academie des Sciences in Paris. Speaking of the matter Mr. Rene said: "There is nothing new about the artificial production of diamonds, but nobody has ever succeeded in making them on a scale available for commercial purposes. The laboratory diamonds were always very small, mere sparks. In fact, the cost of the process was many times their intrinsic value. All that I obtained for my experiments was that the crystals were a little larger and more symmetrical than any others that had ever been made, and that my method of producing them was a distinctly new departure. It is not easy to get into particulars further than to state that the crystallization was effected under intense heat, electrically generated, and also that mechanical pressure was employed. Examined under a microscope, the diamonds were seen to be beautifully clear and perfectly formed. These experiments have been the diversion of my scant leisure, and I have not had an opportunity to pursue them as far as I wish. It is my intention to take them up again when I return to France, and I look for some interesting results."

Are You Going to See Dewey?

For this occasion, the Wisconsin Central Railway will make a round trip rate of \$5.25 to New York via any direct route. For particulars call at City Ticket Office, 373 Robert street, St. Paul.

A YOUNG PHYSICIAN.

"Is he a practicing physician?" "Yes; practicing economy."

are stated as fourteen soldiers killed and thirty wounded. Maj. Ruler of the national guard, was mortally wounded, and Julian Espinosa, captain of the Yaquis who are friendly to the Mexicans, and Tatabata, a lieutenant in the ten years' war, were killed.

TRANSPORT IN TROUBLE.

Leelanaw at San Francisco With a Hole in Her Hull.

SAN FRANCISCO, Sept. 24.—The United States transport Leelanaw came into port today with pumps steadily at work to overcome the effect of a hole in the ship's bottom. The Leelanaw sailed for Manila on Sept. 2 with a cargo of commissary stores and 200 horses for army use. After leaving this port, distempers were developed among the horses and so many of the animals died that the Leelanaw put into Honolulu and landed there the commissary stores and the surviving horses. The transport then started on the return trip to this city. During the three days prior to reaching this port she thick and constant was the fog that no observations could be taken and having lost her bearings the Leelanaw struck the reef bar Montara, twenty miles south of this port, last evening. She was for five hours stuck fast on the rock and when she finally floated off at high tide it was found that the ragged rock had torn a hole in her bottom. It will be necessary for her to go to

Dewey Arrives at New York

About Oct. 1, and his reception will be the greatest that ever happened. The rate from St. Paul and Minneapolis via the Burlington route will be \$23.50 for the round trip. Tickets will be on sale Sept. 25, 26 and 27. The same rate will be made for the reception at Washington, tickets to be sold Sept. 23 and 24. Call at ticket office, No. 400 Robert street, Hotel Ryan, for tickets and sleeper reservations.

Drying Preparations simply de

veloped (dry catarrh); they dry up the secretions which adhere to the membrane and decompose, causing a far more serious trouble than the ordinary form of catarrh. Avoid all drying inhalants, fumes, and snuff, and use only what cleanses, soothes and heals. Ely's Cream Balm is such a remedy and will cure catarrh or cold in the head easily and pleasantly. The trial size will be mailed for 10 cents. All drug stores sell the 50c size. Ely Brothers, 55 Warren St., N. Y.

CASTORIA

The Kind You Have Always Bought has borne the signature of Chas. H. Fletcher, and has been made under his personal supervision for over 30 years. Allow no one to deceive you in this. Counterfeits, Imitations and "Just-as-good" are but Experiments, and endanger the Health of Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is Pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhoea and Wind Colic. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy sleep. The Children's Panacea—The Mother's Friend.

The Kind You Have Always Bought

Bears the Signature of Chas. H. Fletcher. In Use For Over 30 Years.

an confident she will continue to improve and will become a handsome cow.

STRIKE IS IN SIGHT.

Cincinnati Men Demand Reinstatement of Discharged Employees. CINCINNATI, O., Sept. 24.—From facts that transpired today it appears a strike of street railway employees is in sight. Over 300 street railway employees met at Central Turner hall at 2 o'clock this morning, in conference with labor leaders. This means that these 300 men form a street railway union. A joint committee of three labor leaders, including President Rist, of the Central Labor council, and two street railway men, was appointed to visit President Kilgour on Monday, Sept. 25, and demand the reinstatement of five discharged employees. A meeting was appointed for Tuesday to hear the report of this joint committee.

LEAK IN BIG DAM.

Austin, Tex., Without Lights or Electric Street Car Service. AUSTIN, Tex., Sept. 24.—The great dam across the Colorado river here, which was constructed by the city a few years ago at a cost of \$1,000,000, has sprung a leak and the waters in the lake so formed are gradually receding. This has caused the municipal electric light and power plant to shut down, and the city is without lights and electric street car service.

TWENTY YEARS

She Secluded Herself in Her Home Because Slighted.

St. Louis Post-Dispatch. Miss Mary Ann Batten, who, twenty years ago, retired from the world, is dead. While reputed to have ample means, she did not dress as stylish as the day-begone women of the city would have her, so her class in the Sunday school was given to another, who wore better gowns. Miss Batten keenly felt the gradual receding. This has caused the municipal electric light and power plant to shut down, and the city is without lights and electric street car service.

Long Street Car Ride.

Just 271,560 miles traveled in one street car ride of the United States who has had the longest unbroken service. For thirty-one years this man has been on the front platform, and during the whole of his period he has been absent only sixty days from illness. The driver in question, has worked 265 days a year, averaging twenty-four miles a day, or 8,760 miles a year, his hours being sometimes by day and sometimes by night, but he has received \$2 a day for his labor, so that he has earned \$2,715,600 from his employers, and has traveled far enough to have gone 1 1/2 times around the circumference of the earth.

Are You Going to See Dewey?

For this occasion, the Wisconsin Central Railway will make a round trip rate of \$5.25 to New York via any direct route. For particulars call at City Ticket Office, 373 Robert street, St. Paul.
