

# ROYAL Baking Powder in 1900

The strongest, purest, most efficient and wholesome of leavening agents. Not lowest in price, yet the most economical; in 1900, as in the past, indispensable to the work of the pastry cook.

The New Year brings prosperity almost unsurpassed in the history of the country.

For every one there is money enough to buy that to eat which is pure, sound, good, wholesome.

Why should we use cheap, impure, unhealthful articles of food? There is no economy in them; they endanger the health, they may cost life. There are reported almost daily cases of sickness caused by eating cake, puddings or biscuit made with the cheap, alum baking powders.

In all articles for food buy and use only the best. The good health of the family is of first consideration.

Alum is used in baking powders because it is cheap, costing less than two cents a pound. It is a corrosive poison. Think of feeding it to children! Yet the manufacturers of well-known alum powders are actually denying that they contain alum.

his collection of many thousand specimens of geological and prehistoric interest as soon as the society secured quarters in the new capitol building. Secretary Upham in his paper said in part: "Mankind, constituting a single genus, of only one species, is yet variant in four chief races, the Caucasian, or white; the Ethiopian, or black; the Mongolian, or yellow; and the American, or red race. Among all the high orders of animate nature, man is the most fully cosmopolitan. He dwells in every habitable part of the earth, and under every climate, from the burning heat of the tropics to the severe cold of polar regions. Only the ice-covered Antarctic continent, the similarly ice-enveloped interior of Greenland and other barren and frozen lands make him remain uncolonized by mankind. But the birthplace of our species was undoubtedly somewhere in the warm regions of the Eastern hemisphere, or the old world, as we call it in distinction from the new world, which Columbus found in the rock formations of the old world belonging to the late geologic ages termed Tertiary, fossil remains of anthropoid apes are found, but none are known in the rocks of our Western continent, except in North America. Not only are these fossil traces or hints of our ancient pedigree found on the opposite side of the globe, but also there several anthropoid genera survive to the present time, as the gorilla, the chimpanzee, and the orang-outang, each represented by a single species. If we call the old world the yellow and the new world men our brethren, then on a similar scale of expression these anthropoid species are related to us somewhat like fifth or tenth cousins. They are our other nearest animal kin. The great tropical regions of the old world, where they are or were still live, and where their and our backwardly convergent lines of ancestry are made known, though feebly, are marked by the testimony of the rocks, which may be regarded as the source of our new cosmopolitan human species. The aboriginal American peoples seem to most students worthy of classification to be a distinct race, although it may be admitted that they are most nearly allied with the Mongoloid, or yellow race. The records of the Delaware valley, by the testimony of the rocks, which may be regarded as the source of our new cosmopolitan human species.
