

Crackers With A Kerosene Flavor

They are known as the common bulk soda cracker. All grocers don't have them in this flavor—some of them do.

It's no fault of the grocerman. He sells bulk soda crackers because a few customers still buy them as a matter of habit. He also sells kerosene.

Between measuring out kerosene and putting bulk biscuit in a bag things will get mixed.

If you do not fancy the kind with the kerosene flavor ask for **Uneda Biscuit** in the In-cr-seal Package

Made with the utmost care; clean bakeries, clean bakers, best material. Packed in an air tight, dust proof package that does all that it was made to do—keeps the biscuit fresh, clean and dry. They reach you in perfect condition—just as they left the oven.

One of the Wonders of France.
Mr. E. A. Martel, the celebrated explorer of French caverns, has lately been explaining, before the academy of sciences, the remarkable variations in the flow of the great natural fountain of Vaucluse. This fountain, which has been famous for ages, and is connected with the romance of Petrarch and Laura, excites the admiration of all travelers. Arthur Young visited it during his travels in France on the eve of the great revolution, and gave a delightful sketch of it in his book. The fountain is so abundant with water that it gives rise to the Sorgue, a small river. Mr. Martel says, in fact, that the fountain is the debouchment of a river, which, in the upper part of its course, flows entirely underground; and he explains the curious irregularities in the quantity and the temperature of the water by certain assumptions as to the shape and size of the subterranean cavities that give it passage.—Youth's Companion.

Glaciers.
The problem of piercing a glacier by means of boring has at last been solved with results of real scientific interest in experiments made last August on a glacier near Vent, in the Tyrol. At a distance of about one and a quarter miles from the tip of the glacier where its breadth is 2,130 feet and the height of its surface above sea level 8,530 feet, a boring in the middle reached rock at a depth of 500 feet. Taken along with measurements of rate of movement, surface melting and temperature, the experiment enabled the following conclusions to be drawn: First—the temperature of the ice is at the melting point throughout the whole mass on the tongue of the glacier. Second—the bed of the glacier is trough-shaped. Third—the ice moves more slowly at the bottom than at the surface. The bore holes were filled up with pieces of wood, which will serve for many years to come as indexes of the rate of movement and of surface melting.—N. Y. Sun.

Medical Bubbles.
Doctors have invented a new form of bubble. Neuralgia, sciatica and lumbago are known to be affections of the ends of the nerves which lie just under the skin of the painful region. It has been discovered that by injecting air under the skin the ends of the nerves are lengthened and the pain relieved. The bubble of air is pressed by the fingers and caused to move about until all parts are relieved. In dislocations, fractures and bruises the same treatment has given relief.—London Globe.

Prince Albert Winked.
Half a century ago Mrs. Alcott, the American authoress, wrote the following about Albert Edward, prince of Wales, now King Edward of England: "He is a yellow-haired laddie, very like his mother. Fanny and I waved and nodded to him as he passed by, and he openly winked his boyish eye at us, for Fanny, with her yellow curls and wild waving, looked rather rowdy, and the poor little prince wanted some fun."—Cleveland Leader.

"I haven't seen you in your new automobile yet, Mrs. Noorox," said Mrs. Fosdick.
"No," replied Mrs. Noorox, "we haven't been out much. Mr. Noorox doesn't know how to run the machine, and he hasn't been able to hire a good chauffeur yet."—Detroit Free Press.
