Psychology of Gambling.

The fundamental basis of the injury done by gambling is a tendency to overrate the chances of winning. When a man speculates by staking, say, \$1 on the chance of winning \$100, observes an English writer in Nature, the notion of winning \$100 makes a big impression on his mind and means something more real to him than the idea that the odds are 200 to 1 against him, say. He forms a clear mental picture of the prize, and the odds do not present the same picture to his mind. Consequently, he exaggerates his prospects.
